CURRENT FUND REVENUES - MIZZOU
1986 - 87

Making a case

Nov. 5 budget hearing highlights University's 1989 budget request.

The University must convince Missourians of the value of higher education before there is a significant change in state funding, administrators said at the Nov. 5 budget hearing in the Memorial Union. More than 100 faculty, staff and students attended the session, which summarized the

University's budget requests for fiscal year 1989.

For fiscal year 1989, the University system is requesting a 15.6 percent increase in state funds for general operations. The University expects an additional 4.8 percent increase in non-state funds. The request includes money for \$2 million in minority education and scholarships and an 8 percent salary hike for faculty and staff. The Coordinating Board for Higher Education recommended a 13.9 percent increase in state funding for general operations.

The coordinating board recommended that 40 percent of the system's \$2 million capital appropriations request be funded. On the Columbia campus, the board's recommendation includes funds for engineering lab and classroom phase II, Ellis Library phase II planning funds, and the veterinary medicine addition. "Before I came here, I didn't know what the motto 'Show-me' meant," said Chancellor Haskell Monroe. "We have to persuade (taxpayers) that what we do here is of importance to the state before we get the support we deserve."

Along with Monroe, representatives from the three other campuses, UM President C. Peter Magrath and other UM officials were present. Sen. Roger Wilson, D-Columbia, also attended the meeting and fielded questions from the crowd.

Jim McGill, UM vice president for Administrative Affairs, pointed out that in 1978, public higher education in Missouri was funded at 101 percent of the national average. In 1986, higher education in the state was funded at 87 percent of the national average. The percentage of state general revenue funds appropriated to higher education in the past 10 years fell from 17.7 percent to 15.7 percent.

Since 1980, tuition has jumped 75 percent, while state appropriations to the University have increased 33 percent. Administrators voiced their commitment to keeping tuition

at a rate that all families can afford, with Magrath calling tuition increases a national and federal problem. Monroe pointed out that it costs 35 percent of the average Missouri family's disposable income to send one child to the University for a year.

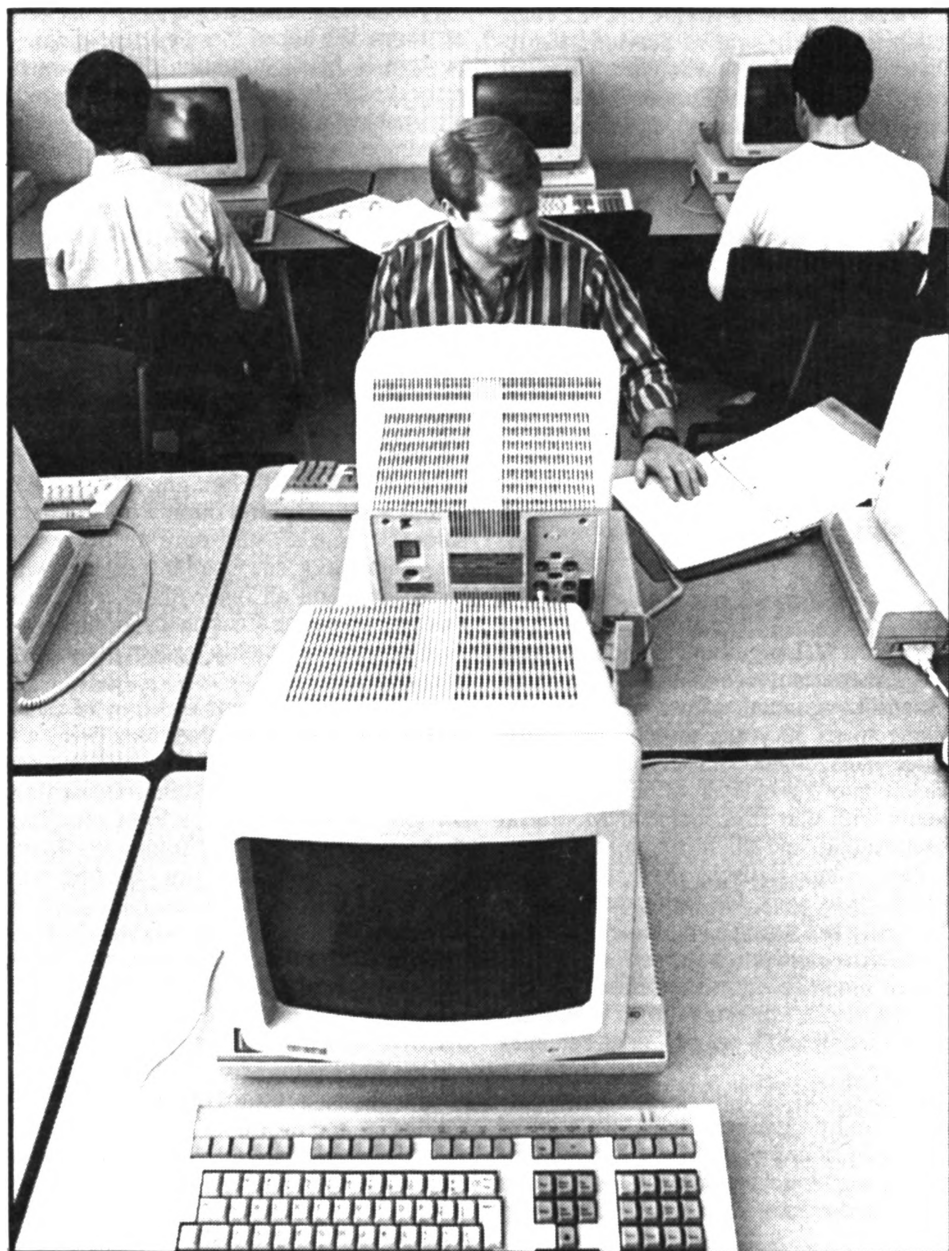

Responding to questions about the University's share of the total state budget, Magrath said the University must positively and aggressively state its case as a total entity. "Most people are not interested in comparisons. They want to know what we can do with an increased investment," he said. "I am optimistic that public support for public universities will continue. The need is so critical. Yes, we must continue to hustle (to bring in those funds)."

Sen. Wilson urged faculty and staff to help change perceptions of legislators. "Legislators don't believe that the state has paid for only 25 percent of the University's major construction since 1979. To change perceptions, it requires a lot of elbow grease and work outside the classroom."

In regard to faculty salaries, Magrath said administrators will not give up their efforts to close the gap between UM faculty salaries and those offered in the Big Eight and Big 10. "We can't ultimately be competitive in national markets if we can't close the gaps," he said.

Monroe said, "We have to make Missourians understand that faculty are so crucial to the economic future of the state that they must be supported at competitive salary levels. They don't see us as in need. But, what all of us do is vital if the state is to move forward."

In regard to eminence programs, Monroe said the designation does not mean that other programs will be de-emphasized. "I hope every faculty and staff member on this campus feels they are equal parts in the efforts made here."

Open house introduces new laboratories

New computing labs give faculty and students an edge in research and support for writing courses.

Computers are the wave of the future, and the Department of Computer Science and the Campus Writing Program are riding high on that wave. They are sponsoring an open house from 2:30 to 5 p.m. Nov. 13 to show off their new computer facilities that boast modern technology and increased accessibility for Mizzou faculty and students. The Computer Science Laboratory is in 111 Mathematical Sciences Building and the Campus Writing Program is in 326 General Classroom Building.

Paul Blackwell, professor and chairman of computer science, says the 13 new computers in the Computer Science Laboratory

Working in the Computer Science Laboratory in 111 Mathematical Sciences Building is Richard Gray, assistant programmer for Campus Computing and a graduate student in computer science. The lab, with 13 new computers, has produced a number of research possibilities.

give access to additional computer programming languages and software systems. Primary users are faculty and graduate students. The center now has access to the standard language used by the Department of Defense and language for logic programming. "Our graduates will have a real advantage. This is where the action is in the computer science field, and we've got access to it," Blackwell says. The lab already has produced a number of research possibilities, he adds. The high-technology computers have up-to-date high resolution graphics and artificial intelligence workstations. "Our graduates will go into specialized research areas in industry; they'll be at the forefront of research in the sciences."

Doug Hunt, director of the Campus Writing Program, is no less excited about the possibilities for the Word Processing Center. Hunt thinks the center can be a major support to the campus' writing intensive courses. "We're not computer experts here, and we don't intend to be. But what we do offer is a less tedious way to make revisions. That's what 'writing intensive' is all about. Students do a paper, they receive feedback and then they retype the paper. The computer lab will give students the opportunity to rework only those portions of a paper that need revision." The lab, which has 47 computers, sets aside nine stations for the use of students in writing intensive courses. Tutors are available to assist students.

The computers are "user friendly," Hunt says. "Students who know nothing about computers can come to the lab with a clean diskette and within an hour be capable of using the computers with the help of the network software and the user assistant always present in the lab." EASY software is used in the lab because, as the name implies, it's easy to use, Hunt says. The labs are designed to provide a quiet, comfortable place for students to work.

MISSOURI FARMERS GO PART TIME

More than half of Missouri's farmers hold jobs off the farm, with nearly 15,000 seeking supplemental income during the past three years.

Rex Campbell, professor of rural sociology, says the decline in full-time farmers is a continuation of a trend that began in the early 1980s. He says reduced income, high debts, increased opportunity for off-farm employment and improved agricultural technology have contributed to the increase in off-farm employment among farmers.

TIME TO PLAN BLACK HISTORY MONTH 1988

Preparations for Mizzou's 1988 Black History Month celebration are under way. The planning committee is working on a program guide that will outline the month's activities. The event, held annually during February, highlights achievements of black Americans.

The committee urges departments to develop activities to help make the celebration a success. Departments can display exhibits, invite black professionals or contribute to a fund set up to finance campuswide events during the month.

Departments that plan to participate and would like their activities listed in the program guide should contact Alton Zanders, director of the Equal Opportunity Office, at 882-7885 before Dec. 23. Zanders is coordinator of department activities for Black History Month.

GET IMMUNIZED TO FIGHT FLU

Flu season is upon us, but you won't need to dig into your war chest to launch an attack on influenza. University Hospital and Clinics will provide free flu immunizations to Mizzou faculty and staff from 10 a.m. to 2 p.m. Nov. 12 in 303 Jesse Hall.

People over 65 or who have chronic heart, lung or kidney problems are a high-risk group for catching the flu and are encouraged to receive immunization. People allergic to eggs should not receive the immunization. Call 882-4161 for more information.

Board OKs face lifts

The History Department has always been a little cramped at Mizzou. But a project approved by the Board of Curators at its Oct. 29 meeting will give the department's 50 faculty, staff and teaching assistants a little breathing room.

As part of a \$456,429 contract with Rajac Construction and Development Co. of Jefferson City, Read Hall will be remodeled to serve as the History Department's new

home. The department now has offices in the Arts and Science Building, but will move into the remodeled space made available when student services offices moved to the Brady Commons addition. The project should be complete by June 1988, and the department should be in its new offices sometime this summer.

"It's a wonderful change for us," says Gerald Clarfield, professor of history and department chairman. "It's the first time in the 20 years I've been here that we'll have true office facilities." Clarfield says the snug offices in the Arts and Science Building don't offer much privacy. "The walls are paper thin, and being so crammed together makes for a lot of noise. The staff will be much better served by the move, as will the teaching assistants who currently are scat-

tered throughout campus." The move will consolidate all department activities into one building.

The contract with Rajac Construction also includes roof repair on Pickard Hall, home to the Museum of Art and Archaeology, and installation of a new roof on Read Hall. Rajac also submitted the low bid of \$223,476 for the renovation of the basement and second floor interior of the Heinkel Building. When the project is completed sometime in spring 1988, Campus Computing operations in Lefevre Hall will move to the Heinkel Building.

The board also approved a \$1 million contract with Reinhardt Construction Co. of Centralia, Mo., for the renovation of biological sciences teaching and research facilities in Lefevre Hall.

Q&A

Q. There is a curious thing going on in the Ellis Library addition. Someone decided to put combination locks on the bathroom doors on the first floor of the addition. Only library staff members know the combination. It looks awfully ridiculous in a public institution that gives access to knowledge but denies it to the bathrooms. One wonders whose mind could concoct such a brilliant idea.

A. Here's the word from Robert Almony, librarian IV and building coordinator of Ellis Library. "First, the locks on the restrooms of the ground floor of the Ellis addition have been deactivated for now. Anyone can use these restrooms by simply pushing open the doors.

"These locks were initially installed in order to give the more than 100 members of the library staff, and other University employees using Ellis Library, a staff-only restroom. We hoped these restrooms would be kept in better condition than the other restrooms in the building so that staff would always have a clean restroom to use."

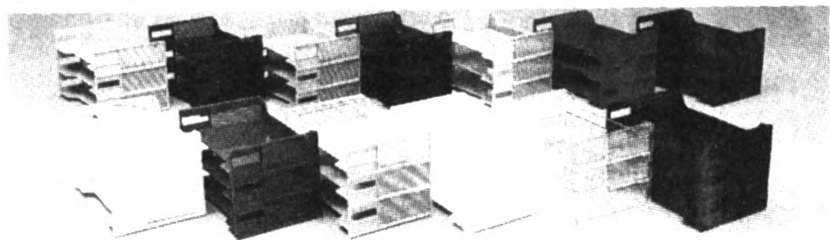

Almony says the restrooms in Ellis Library get a lot of use and always appear more marked up and dirtier than other buildings' restrooms on campus. "This is a function of two things: the extremely heavy usage of Ellis by everyone, and anyone, on campus, and the fact that our restrooms are only cleaned between 11 p.m. and 7 a.m. each day. By mid-afternoon to early evening, most of the restrooms are in simply atrocious condition.

"Again, for now, the restrooms are open to anyone. When the building renovation is completed on the first floor, we will reconsider the issue of 'staff-only' restrooms on the ground floor, since public restrooms will be available on all other floors, and since there are no public areas on the ground floor — it is a staff area only, except for the entrance atrium."

Q. With the recent lighting of Jesse Hall's dome, I have noticed that there are four flags flying over Mizzou. They are the American flag, the Missouri state flag, the University flag and a light blue flag that is unfamiliar to me. Someone told me it is the UN flag. What is this blue flag, and why is it flying over Mizzou?

A. It is the United Nations flag. Pat Higgins, assistant building coordinator of Jesse Hall and manager of Business Services, dug back in her files and polled the office staff to discover why the flag is there. "As far as I can tell, in 1972 the Missouri Students Association passed a resolution to recognize the nations of the world in regard to peace, culture and education," she says. To honor the resolution, the UN flag was placed alongside the others on the quadrangle side of Jesse Hall.

Groshong picked to lead office

Kee Groshong, director of Business Services, has been named interim vice chancellor for Administrative Services. He replaces Duane Stucky, who Nov. 1 became executive director for Economic Development and UM associate vice president.

As interim vice chancellor, Groshong is responsible for planning, institutional research, business operations, facilities operations, and budget planning and development. He also was interim vice chancellor from January to June 1987, while Stucky served as interim chancellor.

A search committee for the new vice chancellor will be appointed within the next few weeks, says Chancellor Haskell Monroe.

Development head selected

Richard W. Languirand will join the staff Dec. 1 as assistant vice chancellor for development. Languirand, whose career in fund raising spans 30 years, most recently was senior management counsel for John Grenzebach and Associates of Chicago. His clients with that firm included Moorhead State, Auburn and Michigan universities.

Languirand replaces John Elizandro, who went to work for Pennsylvania State University last spring. Dennis Holter, director of development, has been serving as interim assistant vice chancellor. He will become senior director of development when Languirand's appointment becomes effective.

"I am encouraged by the strength of the faculty and programs at the University of Missouri-Columbia, and I am looking forward to working with an institution with so much fund-raising potential," Languirand says.

MISSOURI CRAFTS MAKE GOOD GIFTS

If art and quality craft items are high on your Christmas list, the "Best of Missouri's Hands" catalog may make your holiday season a little less hectic.

The 200-page catalog contains hundreds of items from 180 Missouri artisans. Items range in price from \$5 to nearly \$5,000, although most cost less than \$50. The catalog, designed to increase the income flow to Missouri communities, is produced by extension specialists at Mizzou and Lincoln University.

Sold for more than a year at \$14.95, the catalog is now available

to Mizzou employees for \$8.95 plus 58 cents sales tax. Others should add \$2 for shipping, handling and tax. A second volume will be published Feb. 1, 1988, and will sell for \$9.95. Without the catalog, "Many of the artisans would not be able to advertise or promote their goods nationwide or even statewide," says Edie Pigg, coordinator of the catalog at Mizzou.

Contact Pigg at 628 Clark Hall to order a catalog. Make checks payable to the University of Missouri. Mizzou employees must include their campus address to avoid shipping and handling charges.

LAW SCHOOL HAS RECORD MINORITY ENROLLMENT

Minority enrollment in Mizzou's School of Law increased by more than 17 percent this fall, with 40 minority students enrolled. That represents 8.9 percent of the school's student body.

Last year, 34 minority students were enrolled in the Law School. "I am pleased with what we have accomplished, but we still have a ways to go," says Dean Dale Whitman.

MEDIA COLLECTION HONORS WOMEN

History was made Oct. 29 during Journalism Week as Marjorie Bowers Paxson announced the establishment of the Women in the Media Collection at Mizzou. The collection, which is housed in the Western Historical Manuscript Collection, includes donations from 31 charter contributors.

A retired Gannett publisher and 1944 School of Journalism graduate, Paxson initiated the collection to document women's accomplishments in the media. "I hope this collection will offer some historical perspective," she says.

Senator urges faculty to educate Missourians

Sen. Roger Wilson, D-Columbia, urged faculty to take the case of funding for higher education to the citizenry at the Nov. 5 Faculty Council meeting. "I'm from a university town. I believe in research, but ev-

erybody doesn't feel that way. You're going to have to let the people of Missouri know what goes on in your research labs and how it affects them," Wilson said.

"There are too many public higher educa-

tion institutions in Missouri, and they are all trying to get a slice of a shrinking pie." He told council members that higher education institutions should close ranks with elementary and secondary education and present the Legislature with a total package. Although Missouri pays its educators below the national average, the students in Missouri are achieving above the national average. "If we put enough money into education to bring educators' salaries up to the national average, our kids could ascend to the pinnacle of the nation. Why should any state in the nation come before us in educating our kids?" Wilson said.

In other action, Allen Hahn, professor of veterinary medicine and chairman of the academic and faculty affairs committee, presented a report from the Staff Advisory Council regarding fee reductions for employees' dependents. Sam Brown, professor

of psychology, moved to table the matter. "We have already established our agenda, and faculty salaries is the No. 1 item on the agenda." Brown suggested the council not act on the report "until faculty get closure on the faculty salary issue." The motion failed. The council voted to appoint an ad hoc committee to study the fee-reduction report. Committee members are Hahn, Keith Schrader, professor of mathematics, and Walter Johnson, associate professor of economics. The appointment of Johnson, who is not a Faculty Council member, is subject to his acceptance.

The council approved a resolution that requests that faculty councils on the four campuses be invited to participate in the revision of the long-range plan. The resolution also requests that proposed revisions be presented to all four faculty councils before being incorporated into the plan.

FORUM

Federal legislation cuts students' GSL checks

By George Brooks

Students who receive their Guaranteed Student Loan (GSL) checks dated after Oct. 20 may notice that their checks are smaller than they had anticipated. Although the GSL is not subject to the automatic budget cuts dictated by the Graham-Rudman-Hollins law, changes in the GSL are being made.

In a letter sent to banks and guarantee agencies, the Federal Education Department announced that students now will be charged a 5.5 percent origination fee for their GSL instead of the 5 percent they have paid in the past. The origination fee is passed on to the federal government to defray the costs of subsidizing the low-interest GSLs.

The other change that was announced is a reduction in the special allowance payments made to lenders to encourage them to lend money to students. The reduction is from 3.25 percent to 3 percent in some cases and 3.1 percent in others. This could make some

banks and other private lending institutions less willing to make loans to students.

Should Congress find the \$23 billion necessary to meet this year's deficit target by Nov. 20, the additional .5 percent origination fee would be refunded to students.

But if the Graham-Rudman law goes through in full force, there will be dramatic reductions in all forms of financial aid, including education. Under the law, all education benefits would be cut about 8.7 percent for the fall 1988 school year.

The full damage of this law cannot yet be assessed. Experts estimate, however, that federal education funding will be reduced by \$1.4 billion.

Pell Grants are expected to be reduced nationally between \$485 million and \$497 million. All of the approximately 2,500 Pell Grant recipients on this campus would be affected by this change. Students who qualified earlier this year for Pell Grants may find that their funding has been reduced or dropped altogether.

In addition to these changes, the projected tuition increase for the 1988-89 school year is 6 percent. For all these reasons, I suggest that students start exploring other avenues of financial aid.

Brooks is director of Student Financial Aids.

positions are contingent upon funding and enrollment.

Many accidents occur because people don't pay attention, says Ray Morrison, safety representative with Environmental Health and Safety. Morrison will present a defensive driving course from 1 to 5 p.m. Nov. 19 at the Research Park Development Building. Morrison also will present a forklift training program, which will provide hands-on instruction in the safe operation of powered industrial lift trucks, from 8 a.m. to noon Nov. 17 at the Research Park Development Building. The program is designed for both novice and experienced forklift operators. To enroll in either class call Morrison at 882-7018. Enrollment is limited to 25. Both classes are free.

Larry Boehm photo

MIZZOU
IN THE
MEDIA

GELENE ADKINS, assistant professor of nursing, was quoted in an article in the Ozark (Mo.) Headliner on how Missouri's rural communities may soon see an improvement in health care because of an innovative graduate nursing program at Mizzou. Graduates of the rural community nursing program will be able to go into a community, evaluate its needs, analyze its political and cultural characteristics and then develop health programs to fit the community, says Adkins, who directs the program.

BERNARD BEITMAN, associate professor of psychiatry, was quoted in a Chicago Sun Times article about panic disorders and how they are misdiagnosed. About one-third of all patients who complain of chest pain are having serious panic attacks, not heart

seizures, he says. "Often when patients' hearts are found to be healthy, physicians tell them nothing is wrong. That's a shame, because panic disorder can be treated," Beitman says. Other newspaper coverage included the San Francisco Chronicle, Orlando (Fla.) Sentinel and Fort Lauderdale (Fla.) Sun-Sentinel.

A story on the School of Nursing's geriatric nurse practitioner program ran in the Mountain Grove (Mo.) News-Journal and in the Reynolds County (Mo.) Courier in June. The program prepares health-care professionals to meet the physical and economic needs of the elderly. Although the school has been educating nurse practitioners for years, the focus on geriatrics is new, says **MAUREEN BROWN**, an instructor in nursing and coordinator of the program.

MICHAEL CRAWFORD, associate professor of parks, recreation and tourism, was mentioned in a Jasper (Ind.) Herald article on avoiding playground injuries. He advises parents to study the overall safety of a playground; to help their children become familiar with playground equipment, especially if it's the first time at that area; and to show children the proper way to use the

equipment. In Missouri, the article appeared in the Bolivar Herald-Free Press and in the Ozark Headliner.

The May 17 Sanford (Fla.) Herald ran a story about a study that is being conducted by medical schools at Mizzou and at Harvard and Washington universities. The five-year project, which will involve 15,500 pregnant women, will determine whether routine ultrasound scans during normal pregnancies are advantageous to mother and baby. Principal investigator at Mizzou is **BERNARD EWIGMAN**, assistant professor of family and community medicine.

A study conducted at Mizzou on teen-age depression was reported in the July issue of the American Journal of Psychiatry. **JAVAD KASHANI**, professor of psychiatry, studied 150 Columbia, Mo., teen-agers ages 14 to 16 and found that 8 percent of them suffered depression serious enough to warrant psychiatric treatment. The most significant finding, however, was that "two-thirds of the parents were not even aware the child was clinically depressed," Kashani says. The study underscores the importance of family, educators and friends being aware of a teen-ager's actions, attitudes and habits,

he says. Possible signs of depression are changes in appetite or sleeping habits, loss of interest in daily activities and feelings of hopelessness, along with serious anxiety and excessive alcohol or drug abuse. Related stories on his findings also appeared in the Kansas City Star and USA Today, as well as on NBC's "Today" show and the Cable News Network.

The June 24 Mountain Grove (Mo.) News-Journal ran a feature on the Department of Medicine's microcomputer network that placed second in an Office Automation Awards competition sponsored by Administrative Management magazine. MIKEL LYNCH, senior systems analyst and coordinator of the network, says that since 1985, departmental productivity has increased by at least 5 percent to 15 percent.

Teacher retention might improve if teachers were allowed more input, says STUART PALONSKY, associate professor of curriculum and instruction, in an article that ran in June in Missouri newspapers, including the Lawson Review, Seneca News-Dispatch, Wheaton Journal and South-West City Republic. He suggests that teachers, as a group, be allowed to decide what books to use, what classes to teach and how to teach them, and to become more involved in student counseling and curriculum development.

CHARLES SCHMITZ, professor of counseling psychology, was mentioned in a Chicot County (Ariz.) Spectator article on how food affects mental health. For better psycho/nutritional health, Schmitz suggests eating a nutritionally balanced diet and eliminating foods that cause anxiety.

Obesity in children was the subject of a Kansas City Star article that included results of a study conducted by a University husband-and-wife team. After studying 94 Caucasian families, each with a biological child from 2 to 5 years old, MARION TYPPO, assistant professor of child and family development, and JOHN TYPPO, professor of nutrition, concluded that women with higher levels of education tend to have leaner children, probably due to the mother's concern about weight and appearance and the ability to use nutrition and exercise to keep a child's weight under control.

PAUL WALLACE, professor of political science, had a July 31 phone interview with Voice of America for a documentary commemorating 40 years of India's independence. At the University of Texas Sept. 26, he taped a program on contemporary politics in India for Asian Communique.

Co-chairman of the National Head and

Spinal Injury Prevention Program is CLARK WATTS, professor of surgery. An article in the May issue of Health described how teen-agers who have been injured in preventable accidents are enlisted to talk about safety at schools nationwide. Watts says using people kids can identify with is "more effective than an old man in a lab coat shaking a finger." In one Missouri school district, he says, the program accounted for a 25 percent increase in seat-belt usage.

The July 16 St. Louis Post-Dispatch carried an article, "Inequities In Catastrophic-Care Bill," which was written by MICHAEL E. WHITCOMB, dean of medicine. Congress has enacted legislation to expand the Medicare program to include a

catastrophic-care plan. The plan's intent is to limit the amount of out-of-pocket expenses the elderly pay for health care. However, Whitcomb says, the bills fall short of meeting the real needs of the elderly, and unless major changes are made when the bills are debated by the House and Senate, the plan that is approved would not protect most of the elderly from catastrophic health-care expenses.

JEAN GADDY WILSON, lecturer in news-editorial, was interviewed on the television program "Modern Maturity" for a two-part story on women in broadcasting. The Public Broadcasting System program, hosted by Edwin Newman, was broadcast by Missouri stations in October.

Chancellor announces deputy position

Chancellor Haskell Monroe is seeking applications for deputy to the chancellor, a position in his office. This person will have responsibility for efficient operation of the office and will serve as a key adviser on issues.

Candidates must currently be employed on the Columbia campus, have an earned doctorate, tenure and at least five years of administrative experience at the college or University level at Mizzou. Send a letter and curriculum vitae to Monroe at 105 Jesse Hall by Nov. 27.

Law dean search committee begins selection process

A nationwide search has begun for a new law dean. Law Professor James Westbrook is chairman of the search committee, which was appointed by Provost Lois DeFleur.

Committee members are law professors

William Fisch, William Henning, Nanette Laughrey and Michael Middleton; Robert Hawkins Jr., general chairman of the Law School Building Program; W.R. Miller, dean of education; Robin Remington, professor of political science; and Greg Scott, a law student.

In October, Dale Whitman, who has been dean since 1982, announced his resignation to pursue teaching and research at the University. He will serve until a replacement is found; the committee's goal is to find a new dean by the close of the academic year.

STAFF FOR LIFE
CONTEMPORARY ARTS SERIES

Missouri Review editor Speer Morgan isn't resting on past glories.

Snuggle up with a good printout

Missouri Review launches a computer version, making it the first online literary magazine.

When you gain a reputation as one of the premier literary journals in the country, you could rest on those laurels. But not at the English Department's 10-year-old Missouri Review, which this July published its first computer version. Missouri Review Online is the first literary magazine available on home computers around the world.

The magazine is a member publisher on The Source, a worldwide computer subscription service. Missouri Review Online editors, who are mostly English graduate students, send out stories every three weeks from past issues of the journal as well as new material. Subscribers to The Source use

their personal computers and a modem to call up current magazine offerings.

"We always like to think of the future of the magazine," says Speer Morgan, professor of English and a Missouri Review editor. "Publication and delivery through the mail is an expensive proposition, and with the development of modems there has been an increase in the capabilities of computer subscription services." Morgan calls online subscription services "the future of magazine publishing."

Through a menu audit, Missouri Review Online editors can tell how many people have read a Review story. The first issue had more than 200 readers. Morgan says by monitoring what stories are highly read, editors can tell what subjects interest readers, such as a recent account about Vietnam. That helps them plan issues.

"The economics of magazine publishing can sometimes be a straitjacket. We like to experiment, but the cost of publishing can be a force to the contrary," Morgan says. Missouri Review Online allows the group to try new things. A special feature is "From the Class of '88," stories written by teen-agers. "You can do something like that fairly freely on The Source. It's harder to do and to justify in a literary journal."

Morgan hopes the "warmer medium" will enhance interaction with readers. He envisions subscribers submitting stories via The Source for the consideration of Missouri Review Online editors.

CALENDAR

Send calendar items in Campus Mail to Scott Wyman, Mizzou Weekly, 1100 University Place, by noon Tuesday the week before publication.
