

# Evaluation and Monitoring: Developing Indicators and Measuring Impact

Community Development Academy  
March 2006

**Bill Elder**  
**University of Missouri-Columbia**  
**Office of Social & Economic Data Analysis (OSED)**

# Session Plan

- Introductions
- Overview of Concepts and Issues
- Exercises in focusing questions and selecting indicators
- Review of Community Indicator Systems
- Community Indicator Review and Dialogue
- Discussion

# Objectives

- Understand the development and use of indicators for program evaluation
- Value a focus on *outcomes*
- Connect data and conceptual models
- Be aware of data collection issues & strategies
- Use a process to focus evaluative questions
- Use a process to select indicators
- Explore “community indicator systems”

# Theories of action (logic models) define the meaning and relevance of data

- Data
- Information
- Knowledge
- Wisdom

# Theories of action (logic models) define the meaning and relevance of data

- Data
- Information
- Knowledge
- Wisdom

“The construction of knowledge involves the orderly loss of information, not it’s mindless accumulation.” -- Boulding

# Theories of action (logic models) define the meaning and relevance of data

- Data
- Information
- Knowledge
- Wisdom

“The construction of knowledge involves the orderly loss of information, not it’s mindless accumulation.” -- Boulding

Indicators are conceptually connected data—  
they’re answers to questions arising from the logic  
of the program model

# Frameworks for Performance Measures and Decisions

- **Basic research**
  - Theories lead to hypotheses
- **Policy (applied) research**
  - Policy frameworks (logic models) focus key questions...especially **results**

# THE RESULTS

of our *efforts* are what make a difference in community development.

# There are many performance measurement “results” frameworks

- Budget guidance (State of Missouri)
- Utilization focused evaluation (Patton)
- Program logic models (Kellogg Foundation)
- Balanced score card (State of Missouri OIT)

# Why Logic Models?

- A program logic model *links outcomes with program activities* ... and the theoretical principles of the program” (Kellogg, 2001)
- Thus, logic models set up both *formative and summative questions*
- Evaluative answers are “*useful*” when they reduce the risks of making the wrong *decision*

# Types of Evaluation

- **Formative**

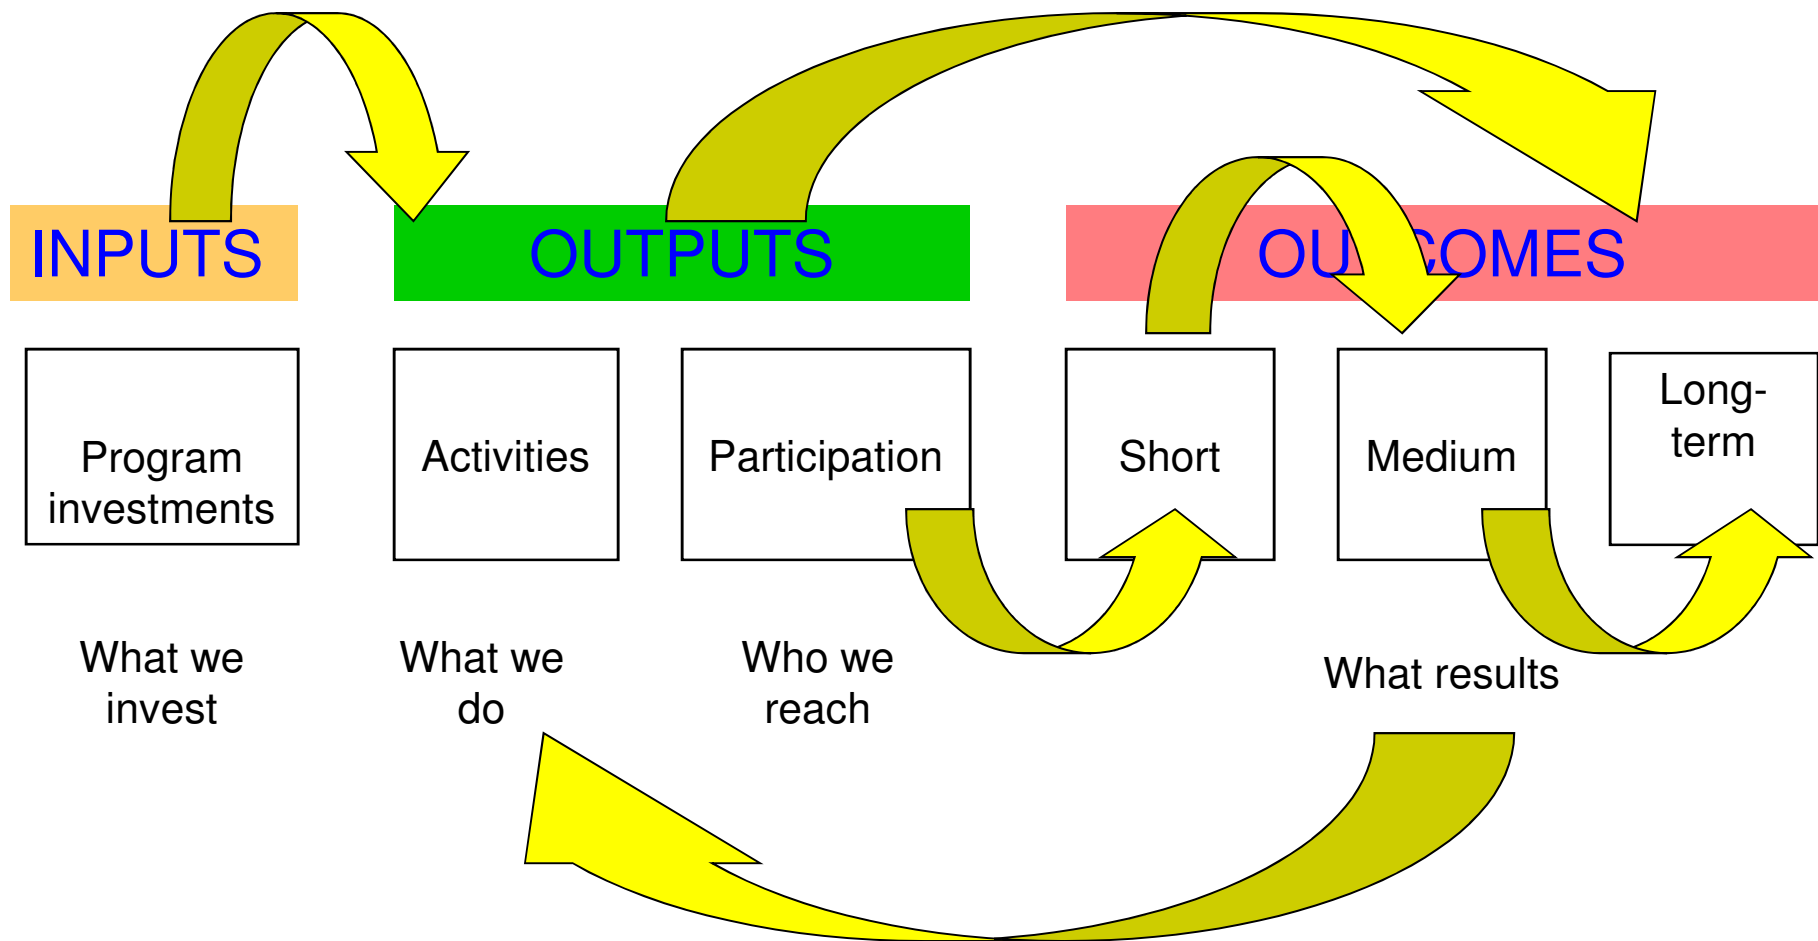

- “Improve”
- Periodic and timely
- Focus on program activities and outputs
- Leads to early recommendations for program improvement

- **Summative**

- “Prove”
- Were resources committed worthwhile
- Focus on outcomes and impact
- Measures value of program based on impact

\* Kellogg logic model development guide

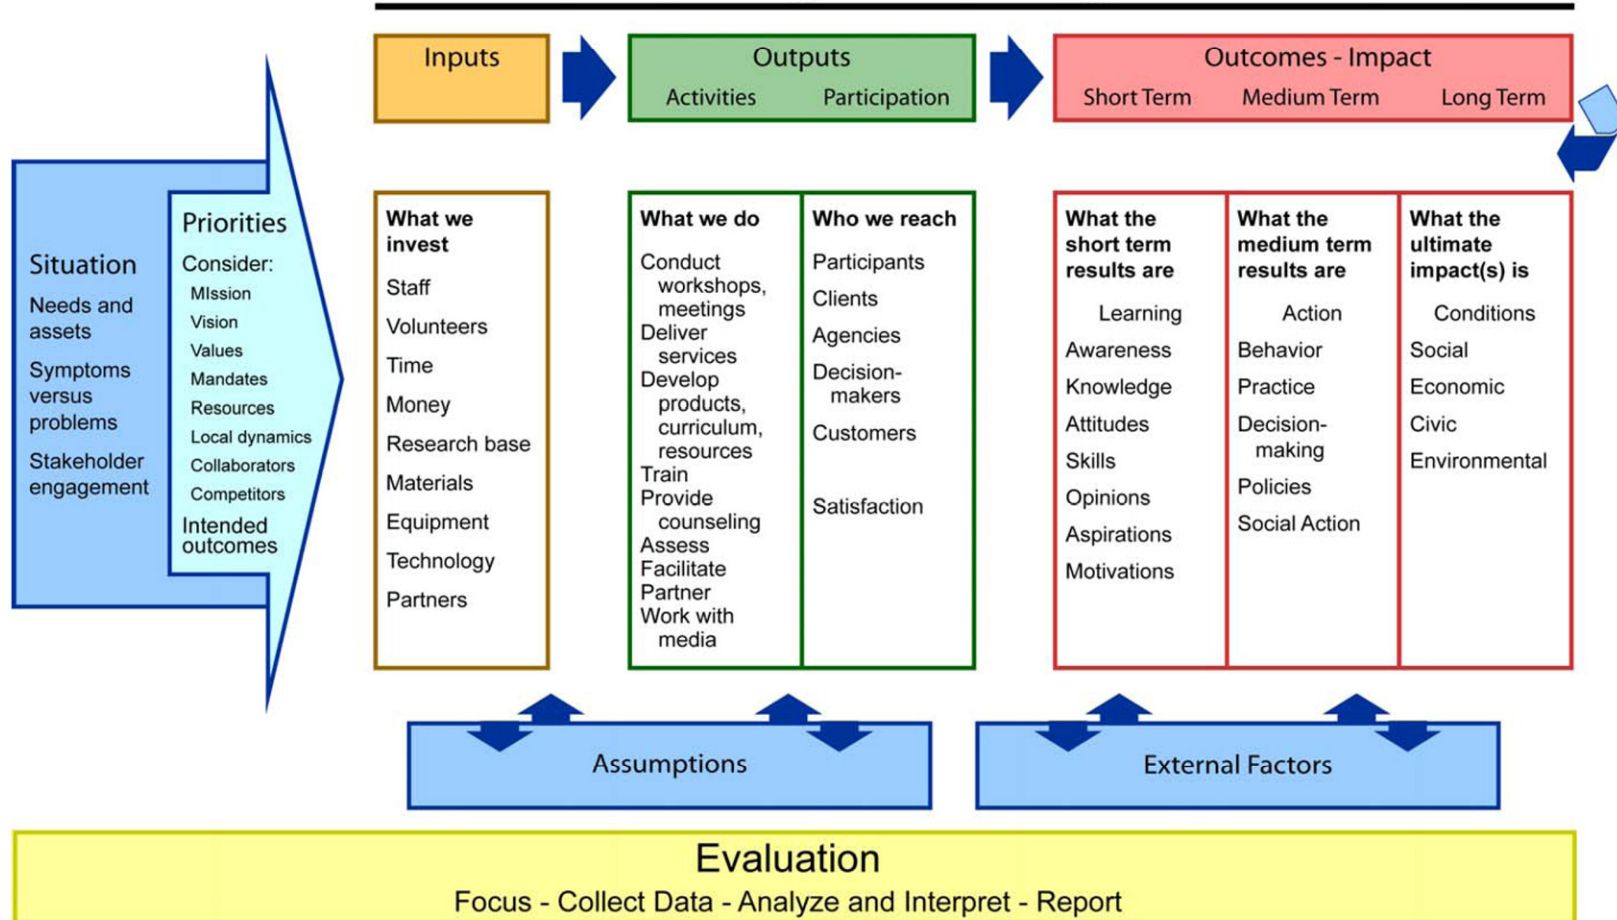

There are multiple dimensions and feedback loops—*logical..if then relationships...*

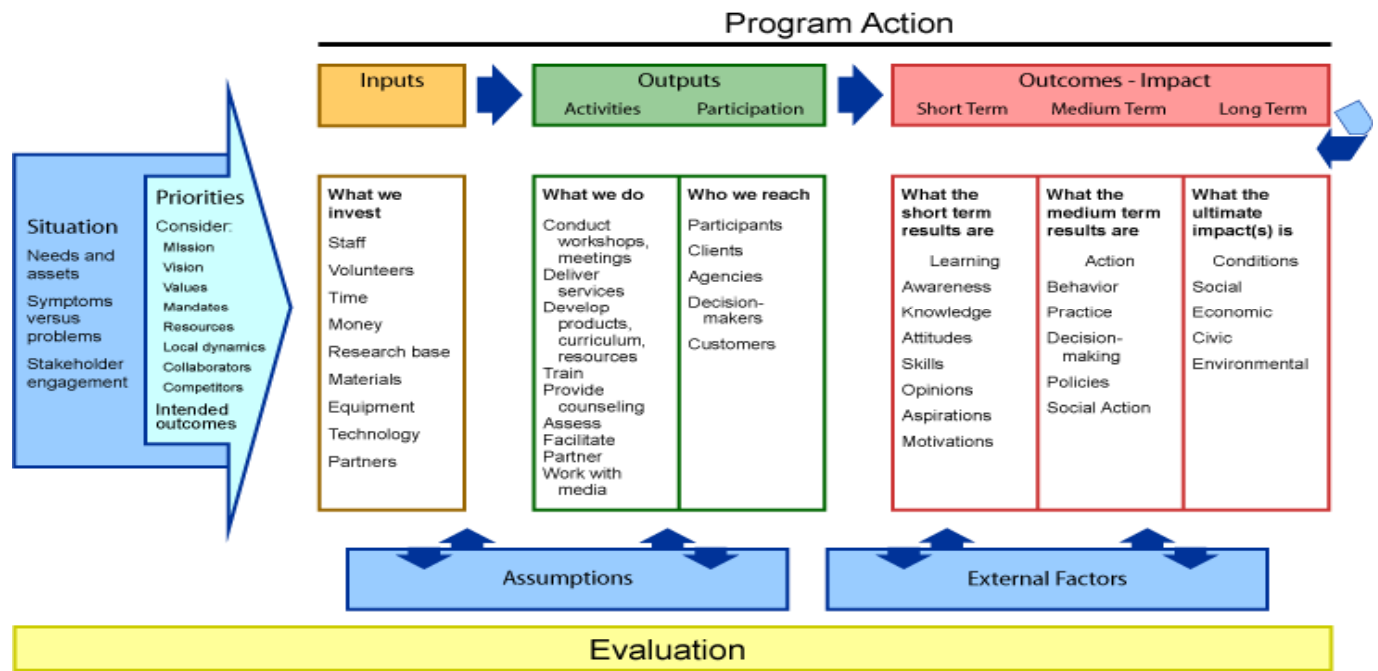

# PROGRAM DEVELOPMENT

Planning – Implementation – Evaluation

## Program Action - Logic Model

**PLANNING: start with the end in mind**

**What do you want to know?**

**How will you know it?**

**EVALUATION: check and verify**

# Why Logic Models?

- A program logic model *links outcomes with program activities* ... and the theoretical principles of the program” (Kellogg, 2001)
- Thus, logic models set up both *formative and summative questions*
- Evaluative answers are “*useful*” when they reduce the risks of making the wrong *decision*

# Centrality of Engagement

- Develop and sustain relationships
- Ability to mobilize resources
- Collaboration ..... beyond communication and coordination
- Achieving focus
- Sustainable actions

# Stakeholder Analysis for *Planning and Evaluation*

- Who – reputational sampling
- What information (information for what)
- How to mobilize ... Interests
- Types of influence (resources)
- Coping with differences
- Source Credibility (expertise—trust)

# Dimensions of Data Collection

- Types of Data
- Data Collection Issues
- Data Collection Strategies
- Data Collection Methods

# Types of Data

- **Quantitative** (counts, rates, means, closed ended questions)
  - “hard”
  - Requires adequate statistical treatment
  - Require clear context for interpretation
- **Qualitative** (focus groups, case studies, open ended questions)
  - “soft”
  - Requires interpretation
  - Can be powerful or perceived as self-serving

# Data Collection Issues

- Validity and Reliability
  - Reproducible—transparent--public
  - Consistent—accurate—precise
  - Number of Cases
- Timeliness and Frequency of Measurement
  - Lagging indicators
  - Infrequent sources (U.S. Census)
- Expense!

# Data Collection Issues

- Representative Measures
  - Selection bias – (intended or otherwise)
  - Types of sampling (cluster, stratified)
- Confidentiality (HIPPA/IRB)
- Historical and future availability (trends)
- Disaggregation categories (NCLB)
- Security (encryption, personnel, servers)

# Data Collection Strategies

- Quality Assurance
  - Field control -- training
  - *Pilot testing*
  - *Ongoing Monitoring*
  - Documentation
- Units of Analysis (smallest appropriate)
  - Data linkage (merging)
    - IDS and Confidentiality – extract files (without ids)
  - Careful about size of files (data handling – transfers)

# Data Collection Strategies

- Proxy Measures
  - “Proxy measures of health care status”
  - “Mothers level of education”
  - “repeat clients”—”customer satisfaction”
- Collaborations
  - Sharing existing data files
  - Bundling effort (teams, samples, infrastructure)
  - MOUs--Partnerships
- Stratified Sampling (categories of interest)

# Data Collection Methods

- ↙ Existing Data
  - ↙ Secondary Data Sources
    - ↙(Census, MCDC, MICA, MERIC, OSEDA)
  - ↙ Agency Files and Records (Access)
- ↙ New Data Collection (adjusting practices)
  - ↙ Clear planning (roles and responsibilities)
  - ↙ Direct Costs
  - ↙ Impact on Business Practices
    - ↙Personnel
    - ↙Impact on Transaction files

# Data Collection Methods

## ↙ Sample Surveys

- ↙ Interviews (direct and phone)
- ↙ Questionnaires (differential response rates)
- ↙ Direct Observation (protocols)

## ↙ Design issues

- ↙ Instrument construction (selecting existing items)
- ↙ Sampling
  - ↙ Multiple methods
  - ↙ As N declines so does reliability
- ↙ Web Applications (Simple—Complex)

# Data Collection Methods

- ↙ Qualitative Methods
  - ↙ Focus Groups
  - ↙ Case Studies
  - ↙ Open Ended Interviews
- ↙ Design issues
  - ↙ “Emergent Issues”
  - ↙ Time frames
  - ↙ Representativeness
  - ↙ Analysis and reporting

# Coping with Complexity

- Build as simple a plan as possible—  
determine what you really need & stick to it
- Plan all the way through analysis &  
*reporting*
- Build a capable team to work your plan
- Consider both internal and external talent
- Adopt an appropriate approach

# Helpful Data Management Tools

- Database management systems
  - Pick up trucks (Access) and dump trucks (SQL)
  - Design, Design and Design (Architecture)
- Statistical analysis systems (SAS, SPSS)
- Spreadsheets -- Graphics
- Geographic Information Systems (GIS)
- Web applications
  - “dynamic” On-line analytical processing (OLAP)
  - “dynamic looking” -- Menu guided pages with tables and charts (gif) images

# Selected Davidson's Principles

- Back it up --- Do it now!
- You can't analyze what you don't measure.
- Take control of the structure and flow of your data—save a copy of the original data.
- Change awareness—keep a record of data changes and manipulations (diagrams help).
- Implausibility—always check for outliers.

Source: Davidson, Fred, (1996) Principals of Statistical Data Handling, Sage Publications, Thousand Oaks, Ca.

# Data Collection Public Resources

- Universities
  - Truman School – affiliated centers
  - Extension – (OSED, CPAC, CARES)
- State agencies, including..
  - MERIC (DED)
  - Missouri Information for Community Assessment (MICA) (DHSS)
  - MCDC – Missouri Census Data Center

# Focusing Assessment Indicators

- “SMART” INDICATORS

- Specific
- Measurable
- Attainable
- Results-oriented
- Timed

- Assessing Indicators

- cost, access, availability, compatible, clear
- Reliability and Validity

# Focusing Questions and Selecting Indicators: Exercises 4 & 5

- Select a logic model--(MOREnet or Other)
- Scan Chapter 4 of *Logic Model Guide*
- *Develop one formative question and one summative question from a focus area #4*
- *Then define Audience, Question, and Use*
- *Then Develop an indicator for each question #5*

# Community Indicator Systems

# General Characteristics of Community Indicator Systems

- Open for involvement of a wide constituency
- A "big-picture" perspective
- A plan of work based on an objective review of data Action based on consensus
- Involving those directly affected by critical problems and needs

**\*See National Association of Planning Councils**

# Some Missouri Systems

## Missouri Kids Count

<http://oseda.missouri.edu/kidscount/>

## Boone County Indicators Project

<http://www.booneindicators.org/mission.shtml>

## School Data: School Improvement Information

<http://www.dese.mo.gov/schooldata/>

## Vision for Children in St. Louis

[Vision for Children at Risk, St. Louis, Missouri.](#)

# National Award Winners & Sustainability Sites

- the Community Indicators Consortium  
Project of the Brookings Institute:  
[http://www.brookings.edu/metro/umi/cic\\_awards.htm](http://www.brookings.edu/metro/umi/cic_awards.htm)
- Really cool site with focus on  
“sustainability indicators”  
<http://www.sustainablemeasures.com/>
- The International Sustainability Indicators  
Network
- <http://www.sustainabilityindicators.org/>

# Constructing Composites

- Kids Count County Rankings
- Composite of standardized indicators
- Rank order of composite scores
- Excel file illustration
  - Standardized indicator is not too complex
  - But it has a funny name “z-score”

# Development of Senior Report

- Set of preliminary indicators
- 47 town meetings involving @ 500 people
- Developed issues inventory
- Indicator suggestions
- Report format recommendations
- Partners and advisory committee
