## Section Five

# Programming

# Odd & Even Program Sections

## ODD SECTION

```
CALC MAT_COST = MILES * $NUM1
CALC LBR_COST = MILES * $NUM2
CALC TOTAL_COST = MAT_COST + LBR_COST
```

Total bytes read =  
 $3 * \$NOSEL * \text{Width}$

## EVEN SECTION

--	--	--	--

```
PROGRAM SECTION EVEN
CALC MAT_COST = MILES * $NUM1
CALC LBR_COST = MILES * $NUM2
CALC TOTAL_COST = MAT_COST + LBR_COST
PROGRAM SECTION ODD
```

Total bytes read =  
 $\$NOSEL * \text{Width}$

# ODD & EVEN PROGRAM SECTIONS

## NEXT PROCESSING

# ODD & EVEN PROGRAM SECTIONS

## NEXT PROCESSING

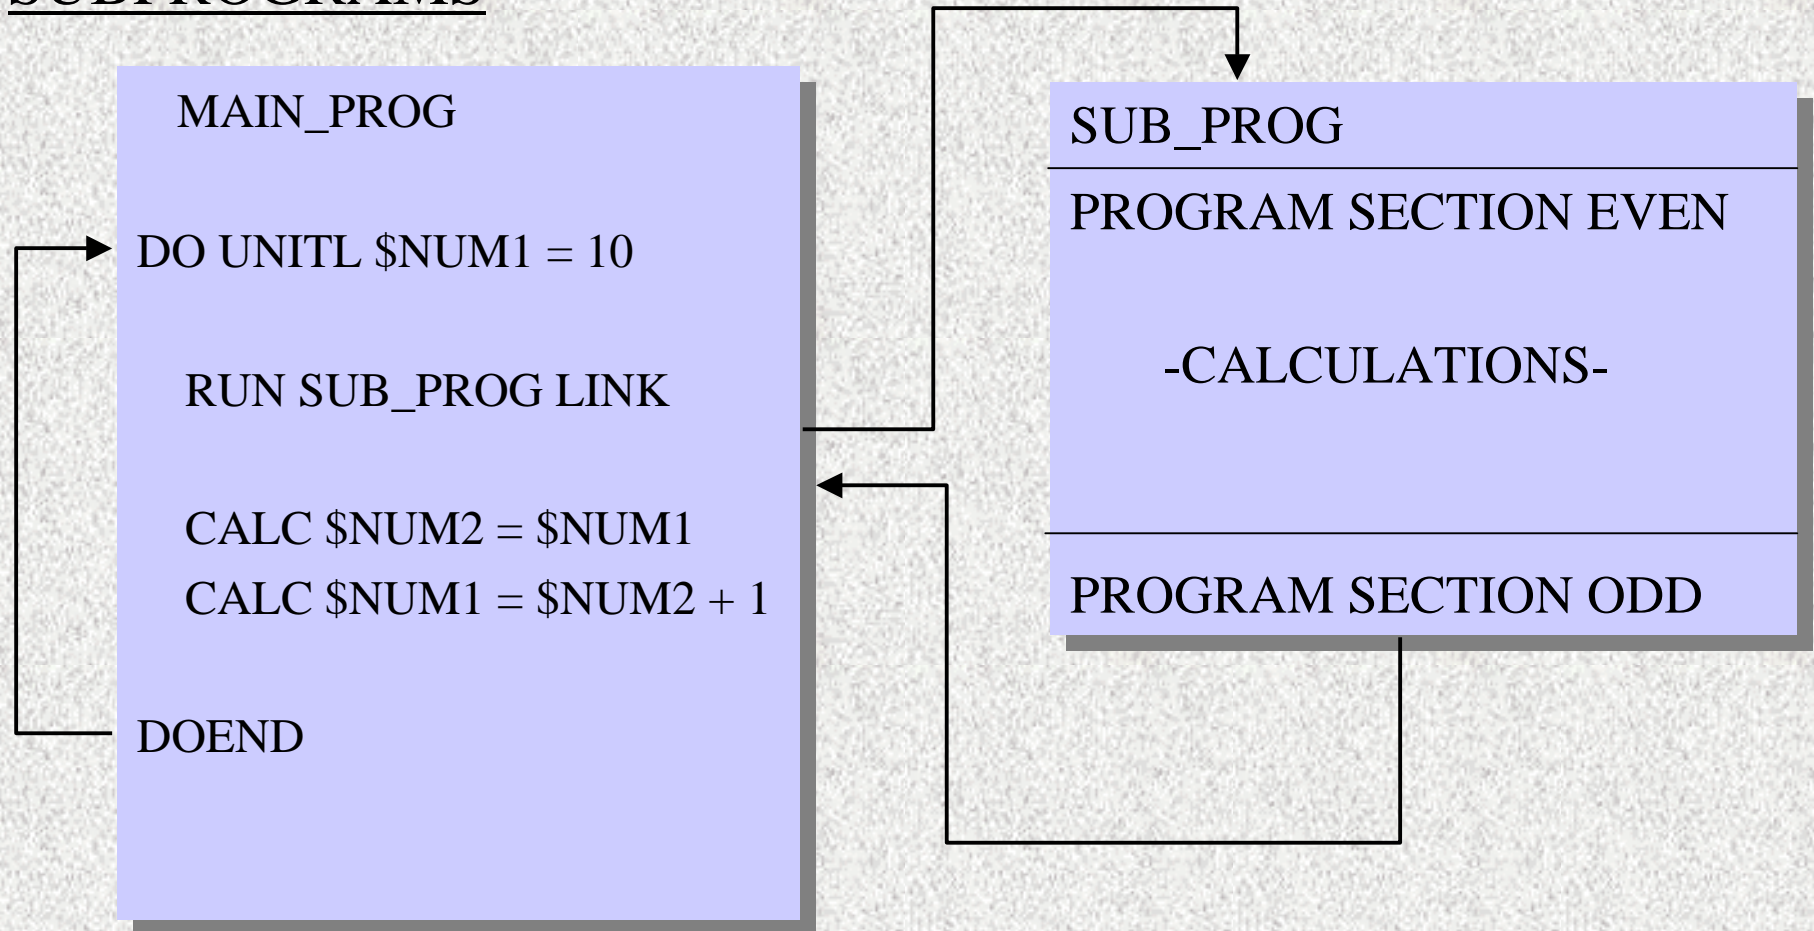

# Odd & Even Program Sections

- GOTO...LABEL
  - Cannot branch to a label that is contained in another program section
- DO...DOEND
  - A DO loop may not cross program sections
- IF...ENDIF
  - An IF block cannot cross program sections

# Odd & Even Program Sections

## SUBPROGRAMS

After COMPILE:

COMPILE records item columns in program OBJ file.

After MODIFY:

Item positions recorded by COMPILE no longer match item definitions.

After COMPILE:

COMPILE updates item positions to match new file definition.

# Compiling and Decoding

- Tells INFO to compile code again
- Performs no immediate action
- Info editor automatically sets decode flag
- Always use decode when debugging

# Debugging Techniques

- Test Files
- USE \$NM
- Run with LIST
- Displaying Checkpoints
- Breaking from a Program  
(Prime Users Only)

# Editing INFO Programs

- INFO CHANGE COMMAND
- SRC FILES
- COMI FILES
- AML PROGRAMS

# Editing INFO Programs

The following AML is an example:

```
/* MK_CALC-IDS.AML
/*
/* Recalculate user Ids for a specified
/* polygon coverage
/*
&Args Cov
&If Not [Exists %Cov% - poly) &Then ~
&Return Coverage %Cov% not found or has no topology.

&SET Have_prog := {Exists CALC-IDS - INFO]

&Data Arc Info
&If %Have_prog% &Then &Do
Erase CALC-IDS
Y
&End
PROGRAM CALC-IDS
SELECT %Cov%.PAT
CALC %COV%-ID = %COV%# - 1
END
    /* This line blank to end program.
RUN CALC-IDS
ERASE CALC-IDS
Y
QUIT,STOP
&End
&Return
```

Of course, we didn't really need a program to do this calculation, but it illustrates the point.

# Running Programs with LINK

- Returns to calling program
- Do not use END
- Automatically compiled with calling program
- Use as subroutines
- Use link to run menu options

# Menu Files and Programs

## AN EXAMPLE:

```
PROGRAM MENU.PG
```

```
FORMAT $NUM1,22,I
```

Accepts option number from user.

```
CALC $NUM1 = -1
```

```
SELECT SCHED RO
```

```
DO UNTIL $NUM1 GE 0 and $NUM1 LE $NOREC
```

```
DIS =
```

```
DIS ‘
```

Option Action’

```
DIS ‘ ‘
```

```
DIS ‘
```

‘,\$RECNO,’ -’,TEXT

```
DIS ‘ ‘
```

```
DIS ‘ Enter the number of your choice, or <CR> to quit: ‘,=
```

```
ACCEPT $NUM1
```

```
DOEND
```

```
IF $NUM1 = 0
```

```
QUIT/STOP
```

```
ELSE
```

```
RESELECT BY $RECNO = $NUM1
```

```
EXECUTE RUN_COM
```

```
RUN MENU.PG
```

```
ENDIF
```

# Menu Files and Programs

- Options kept in an INFO file
- Menu program uses EXECUTE
- Compact, portable and modifiable
- Variations
  - HELP program
  - Control of access
