THE PROJECT TULIP
(Summary)

The Project TULIP is the first attempt made towards the preparation of a systematic and comprehensive list of Indian periodical publications in the Humanities and Social Sciences as a means to compile a union list of their holdings available in major libraries of the United States and Canada. The final form will cover four major areas, viz. periodical publications in the (1) Humanities and (2) Social Sciences, (3) Newspapers, and (4) Monographs in Series, published in English, Hindi and Sanskrit in India.

I had been working on this Project for about five years, but my regular official duties as the South Asia Librarian at the University of Missouri in Columbia did not allow me to do full justice to this great bibliographical undertaking. However, I had collected valuable data pertaining to approximately 3,000 titles on 12,000 index cards.

In the summer of 1978 the American Institute of Indian Studies (Chicago) awarded me a Senior Research Fellowship for a year's work in India. My University granted me not only sabbatical leave but also substantial financial assistance through its Research Council.

Both my wife Sarla and I reached India in early October, 1978. We established an office in Mysore under the generous auspices of the Post-Graduate Department of Library and Information Science of the University of Mysore. We engaged the services of four professional librarians and an equal number of experienced typists. The team worked vigorously for about eight months. Approximately forty union catalogs and lists of periodical publications, produced in India, England & the USA, as well as some individual library catalogs, were digested and extensive basic data pertaining to about 12,000 titles were collected on about 20,000 cards. These were checked, verified, organized, and integrated into one alphabetical sequence. Thereafter the total information was transferred onto the data sheets, which I have developed and termed "Bio-Biblio-Data-Recorder," each BBDR constituting four pages of 8½ x 11" size and having provision for recording data relative to as many as one hundred categories of information or data elements.

The Office in Mysore was closed at the end of May, 1979, because I had to visit some major libraries in India to verify the data already collected and to collect additional data (and titles, too) if possible. The completed
data sheets numbered about 15,000, and weighed approximately 1000 kgs. Since this heavy load could not be transported from library to library all over India, the total information was typed on plain sheets of paper. This compact form of the Master-List consists of 1,000 pages and features information in 10,000 entries. These sheets, beautifully bound in three volumes, represent at least ten thousand work hours and are valued at approximately $50,000.

I visited libraries in Madras, Hyderabad, Calcutta, Varanasi, and Delhi, with the result that our data base was considerably enriched. One of the most useful features of the List is that, unlike the traditional union catalog, it does not locate a title in a specific library but in some major union catalogs which report the title in reference. Therefore, it is an index to the world union catalogs—a union catalog of union catalogs. Now a reader interested in a specific title need not wade through, say, two scores of union catalogs to locate where in the world the desired title is available, but he can consult only this TULIP and see which specific union catalog reports the title sought by him.

The data reported in this Master List (still a prototype) pertain not only to the "past" of a periodical publication, but also its "present," the very recent one. Thus, it is a combination of a union catalog of periodicals and a directory of periodicals, since it combines the features of both.

And finally, this is the most comprehensive, systematic, authentic, and authoritative list of Indian periodical publications ever compiled and brought out in a book form.
Dr. Murari L. Nagar
1405 St. Christopher
Columbia, Missouri 65201

Dear Dr. Nagar:

Thank you for your recent visit to my office, during which you outlined for me the results of your year's sabbatical leave in India. I am proud to have had some small part in encouraging you to persist in this ambitious undertaking. Your Project TULIP, to create a systematic and comprehensive list of Indian periodicals in the social-science and humanities areas, impresses me as one of the most significant research achievements I have seen in the eighteen years I have been on this campus. Although my area of historical research is far from the geographical region you are dealing with, I have personal experience both of the help provided to scholarship by the type of bibliographical aid which you have undertaken to produce, and of the difficulty of research when a subject-area lacks such aids.

After reading your two preliminary reports, inspecting the three-volume list of periodicals which you have compiled, and discussing your work with you, I am impressed both by the great amount of work you achieved during your sabbatical year in India and by the long-term significance of what you have accomplished. Indeed, my first reaction is that once the publication is completed, there must be some permanent institutional structure, like that which exists for Gregory's Union List of Serials in North American Libraries, so that regular supplements can be prepared and published.

Project TULIP will certainly become a permanent and indispensable reference for researchers in the field of South Asian studies, and in a great many other fields which impinge on South Asia. Only a person well qualified in both Library Science and South Asian culture, such as yourself, could have conceived and directed such a project. When published, it will become part of the basic bibliographic collection of all serious research libraries, not only in the United States but throughout the world. I am proud to think that this achievement will be linked to the name of the University of Missouri.

I realize that much work remains, and that you will need substantial additional support from internal and external funding sources. But I feel confident that your future stages of publication, computerization, and surveying the holdings of American libraries will attract the needed support. You have achieved so much that it is essential to push ahead and make your results fully available to the world of scholarship. Certainly if I can help with future grant applications, I shall gladly do so.

Sincerely,

Charles G. Nauert, Jr.

Dr. Murari Lal Nagar, Librarian
Ellis Library
UMC
Columbia, MO 65211

Dear Dr. Nagar:

My examination of the three-volume work you have just completed on "The Universal List of Indian periodicals" leaves me nearly speechless. That you were able to complete this work during the one year you were on leave is a great tribute to you. Only a person of your training and commitment to the assignment could have done what others would have thought impossible in such a short time.

What is important about your three-volume work is that once it is published, it will be available to the libraries not only in the U.S., but to other countries, and provide a rich treasure for scholars throughout the world.

For those of us at UMC who have a strong interest in South Asian Studies, your work will add greatly to our resources and therefore, scholarship. As a member of the South Asia Committee here at the University of Missouri, I want to thank you for the contribution you have made in the past to the South Asian Studies and especially for the new work you have just completed in Indian periodicals.

Sincerely,

Douglas Ensminger

Dear Dr. Nagar:

The work thus far accomplished on your Tulip project is phenomenal. You are to be congratulated having completed this phase within the time span and with the limited resources available.

This comprehensive bibliography of Indian periodicals forms an excellent basis for creating a Union List of Indian Periodicals in American Libraries. Your idea of putting this data into computerized form to facilitate the addition of holdings of American libraries appears to be feasible.

When completed the list will be particularly valuable because of the capability of analyzing its contents by language, area, subject, etc. I trust that you will succeed in finding financing for completion of this worthwhile task.

Very truly yours,

Ralph H. Parker
Dean Emeritus

Dr. Murari Lal Nagar
Library

Dear Murari:

I wanted to drop you a note concerning your most valuable research project conducted during the last year while you were in India. Although the volumes of data speak for themselves, I as a professional bibliographer and historian fully appreciate the time and personal commitment that must have gone into first the handlisting and the tedious job thereafter, namely, annotating and adding information on location, time of publication, full bibliographical data, and so forth. The thousands of citations to a wide range of Indian serials will be of almost limitless help to scholars and bibliophiles who are attempting to track down material in India. More importantly, the citations will serve as a baseline for attempting to gain some kind of bibliographic control over Indian serials in this country. As we both well know, that control is almost non-existent. Many libraries have not supplied information to NUC, and when they did so, the information often was inaccurate. Now we have a comprehensive list of what has been published. The next stage, with which I will be glad to cooperate, would be to take the citations and the database, and then after securing adequate external funding, to systematically survey the major holdings in this country. Then and only then can we really know what is here, locations, and where the gaps are (and how they can be filled).

Your current research and compilation of information on Indian serials is most laudatory, and meets a crying need within the profession. I shudder to think of the thousands of hours that have gone into the project thus far, and the thousands more that will be required to complete the U.S. side of the picture. I stand ready to cooperate in any way possible because the project is vital to South Asia studies, and the state of serials control in general. Many of the titles that you cite will be useful not just to scholars with immediate interest in India, but rather to a wide range of specialists who wish reliable information of location of data on cross-cultural issues and disciplines, such as science, literature, and the social sciences in general. Let me commend you on your work to this point—I trust we can work together to generate the external funds and the appropriate climate of understanding and cooperation within the University to insure that the important work goes forward.

Yours Sincerely,

Prof. N.Q. Barfier

Dr. Murari Nagar
University of Missouri Library

Dear Dr. Nagar:

I want to congratulate you for the major contribution you have made in the development of a systematic compilation of bibliographic materials concerning published literature on South Asia. It is the crowning achievement of many years of work.

Your facility with numerous languages has made it possible to compile and systematically arrange some ten thousand references in English, Sanskrit, and Hindi. It will be of great value to scholars who are engaged in research in an Asian culture. These volumes should be in every major library in the world.

Sincerely,

Noel P. Gist
Professor Emeritus of Sociology
October 1, 1979

Dr. Murari L. Nagar
International Studies Librarian

Dear Dr. Nagar:

I have examined the typescript volumes containing detailed and extensive bibliographic data on Indian serial publications which you completed while on sabbatical leave in 1978 and 1979. These volumes constitute a very impressive work which obviously involved a great amount of time and labor, as well as scholarly editorial judgment. The bibliographic information the volumes contain should provide the basis for a union list of holdings of American libraries, which I am sure would be of great importance to scholars. I hope such a project can be realized.

Sincerely,

John H. Gribbin
Director of Libraries

JHG/bb

Dr. Murari Lal Nagar
South Asia Librarian
3A31 Library

Dear Dr. Nagar:

I have carefully gone over the materials which you collected in India while engaged in research this past year. Your two volumes indeed is quite an impressive feat of scholarship. Even in its present form it can make a notable contribution to the goal of a systematic and comprehensive list of Indian serials in the humanities and social sciences published in India. Certainly, I recognize the need for careful proofing, the preparation of a "clean" manuscript and even some further work. Nonetheless, it is remarkable to me how comprehensive and useful it is even in its present state.

You and the research staff you engaged while in India are to be congratulated on your scholarly accomplishment.

Sincerely,

Dr. Paul Wallace, Director

Dear Murari:

Many thanks for the report on TULIP. You have undertaken a stupendous task, and the results are very impressive. I hope that you will be able to secure funds to see the project through to completion. It will indeed be an important tool for research in Indian studies.

I enjoyed going through the report, as it gives a very vivid picture of the problems you have faced and ingenuity in solving them.

With all good wishes.

Sincerely,

He T. Embree  
Counselor for Cultural Affairs

United States International Communication Agency
Dear Dr. Nagar,

Thank you for sending me a copy of your report on Project TULIP. I find what you have done to date most impressive and earnestly hope that you can secure the funding to complete the project.

Working with the South Asia Microform Project (SAMP), I know how difficult it is to identify and track down files on Indian periodicals. SAMP's goal, as you are aware, is to preserve and make available in microform materials that are important for the study of South India. While we have had some success with government publications from the British period, we have run into countless difficulties in dealing with non-governmental periodicals, especially those that are of interest to humanists. One primary difficulty has been simply identifying what exists. By compiling a Master-List with 10,000 entries you have already rendered a valuable service. I certainly hope that you will find the means to reproduce this list and make it widely available. The sum of $5,000 that you estimate it would cost to do this certainly seems modest when compared to what librarians and scholars interested in South Asia will be gaining.

A second major difficulty that SAMP runs into, is trying to find files of particular titles that it wishes to film. As Professor Barrier points out in the letter included in your report, NUC is often not very helpful due to the number of libraries that have not reported their holdings or have reported them incorrectly. This is especially true in the case of "minor" publications from Asia and Africa. In connection with SAMP and other area study microforming projects, I and my colleagues have sent out hundreds of letters trying to locate files of particular titles that we wanted to film, often with meager results. On several occasions, titles have turned up in places where we least expected to find them. The existence of a comprehensive union list of Indian periodicals in American libraries would make SAMP's work much easier and more productive.

In examining the specimen TULIP entries that you included on pages 110 and 111 of your report, I was pleased to note the extent of bibliographic detail you included. This will make it easier for librarians to use the list in checking against their holdings and will make it an important tool for catalogers.

Congratulations on the outstanding job you have done to date. If I can be of any help to you in the future as you attempt to complete this important project, please feel free to call upon me.

Sincerely yours,

Ray Boylan
Assistant Director

Dr. Nagar:

I have read in detail your project TULIP, towards the preparation of a systematic and comprehensive list of Indian periodical publications in the humanities and social sciences, in order to compile a union list of their holdings available in the libraries of the United States and Canada. This comprehensive collection of data is a monumental work that will be very valuable for researchers working in South Asian studies and many other in similar studies. Only a person with the background and dedication as you can produce such a tremendous and valuable compilation. I am hoping that once the project is completed you will pursue the list of periodicals to be computarized so its access will be even more valuable. I wish to congratulate you, and also Mrs. Nagar for her support and assistance in the project.

I also wish to let you know that I appreciate your assistance in the cataloging of Asian materials in my work as a cataloger.

Sincerely,

Mireya del Castillo

Dr. Murari L. Nagar
1405 Saint Christopher
Columbia, MO 65201

Dear Doctor Nagar:

I have received your report on Project TULIP. It is a very important project and I am impressed with your progress to date.

This library now produces (hopefully on a quarterly basis) a microfiche edition of our Central Serials Record which indicates our holdings for approximately 65,000 serials, 35,000 of which are currently received. The drawback to this list is the government documents are not consistently included. When the time comes, I imagine that we could supply you with a free copy of this fiche although it is normally sold.

Please keep us informed of the progress of your work.

Sincerely,

Irene M. Joshi
South Asia Librarian
April 7, 1980

To Whom It May Concern:

I congratulate Dr. Murari L. Nagar for his previous bibliographic control of South Asian Serial publications.

Dr. Nagar's present proposal is quite an energetic undertaking. That it is invaluable work is unquestionable. Anyone who has done serious research using serial publications can understand the value of complete bibliographical information along with holdings information. His project will be of value both to librarians and South Asia scholars.

I applaud Dr. Nagar for his ambition and wish him well both in securing the needed resources for his project and in perservering with the formidable task he has set for himself.

J. Drew Racine
Serials Librarian
Ellis Library
UMC
Dr. Murari Lal Nagar
Librarian
International Studies
University of Missouri
Columbia, Mo. 65201

Dear Nagar ji:

I take this opportunity to congratulate you for your successfully completing the first and very important phase, namely, preparation of the masterlist of the proposed "Union List of Indian Periodicals in American Libraries" (TULIP). After carefully going the plan of your work and the report of your field work in India, I am convinced that TULIP is a unique project to meet with the growing needs of the South Asian scholars. Your Union List will not only facilitate access to materials available within the country, this will also for the first time take an accurate census of the Indian periodicals available throughout the world.

I consider TULIP a very important and timely project for a variety of reasons, some of which are:

(a) Most of the currently available tools covering Indian periodicals are inadequate to provide the kind of information South Asian scholars, teachers and government agencies need. American scholars have traditionally depended on British and Indian library resources to meet their research needs. Unfortunately because of various reasons such as a lack of travel funds, visa difficulty, it is becoming increasingly difficult for scholars to proceed to India or the United Kingdom for use of collections there. In the present situation the need for tools such as TULIP is greater now than in the past.

(b) The NEH and Duke University jointly funded project, "A Union List of South Asian Government Serial Publications (1858-1950) in the Major U. S. Libraries" includes a limited number of periodicals and journals in social sciences and humanities. TULIP will fill the gap left by the Duke project. In fact, to the best of my knowledge, none of the projects contemplated or in progress cover the areas proposed by TULIP.

(c) The PL-480 program of acquisitions from South Asia conducted so commendably by the Library of Congress since 1961 is likely to phase out in the next 2-3 years. The Library of Congress has alerted the participants in the program to be prepared for a dollar-contributed co-operative program. Considering the dimensions of the program and the present economic situation not many libraries are likely to be able to support any co-operative program even at 1/3 of its current level. Resource sharing will become more important

(Cont.)
than ever before. TULIP will be a great contribution to our knowledge of our national resources in the area of South Asian studies.

(d) In 1978 the Library of Congress conducted a study for the establishment of a National Periodical Center (NPC). The study was funded by the Council of Library Resources and several other foundations. The aim of the proposed Center is to provide a reliable method of access to a comprehensive collection of material on all subjects to the U.S. scholars. It is proposed that NPC would provide access to titles not in its collection through a system of referral libraries. NPC also proposes to develop and make available "a finding tool". Recently a Senate Sub-Committee on Education, Arts and Humanities has endorsed the proposal for the establishment of a National Periodical Corporation (not Center) and has recommended further study to be completed by the end of 1981. It need hardly be emphasized that TULIP will be of invaluable help to the Corporation (which is hoped to be established) both in its referral service as well as in developing finding tools.

(e) National consortia such as Center for Research Libraries and the South Asia Microform Project have strived hard for years to gain access to bibliographical tools like TULIP to fill their gaps.

As a South Asian bibliographer and collection development librarian for 20 years, I can assure you that your proposed Union List is a badly need bibliographical tool. I hope that you are able to get the necessary financial assistance to complete the project.

If I can be of any help to you, please let me know without hesitation.

With my best wishes,

Avinash C. Maheshwary
South Asia Bibliographer &
Project Director,
"Union List of South Asian Govt.
Serials in U. S. Libraries"
Dr. Murari L. Nagar  
Librarian, International Studies  
Ellis Library  
University of Missouri-Columbia  
Columbia, MO 65211

Dear Dr. Nagar:

I have greatly enjoyed reading a report of the project TULIP. It is very impressive indeed and you have really spent enormous efforts toward producing a Union List of Indian Periodicals. I would like to congratulate you for having successfully completed the first phase of this worthwhile project.

I wonder if the scope of this project could be enlarged a step further. For instance, one may want to know the impact of the papers published in some of the Indian Periodicals on the overall state of the knowledge in humanities and social sciences. How often some of the papers published in a periodical like 'Triveni' have been cited later? I realize it is very difficult to compile this information, but even if it could be done for only a few of the major periodicals (publishing original papers), it will be extremely valuable in evaluating the impact of Indian research.

The overall project outlined in TULIP is certainly well-conceived and I do hope that you will succeed in obtaining funds to complete the remaining two phases also.

With personal regards.

Sincerely yours,

M. M. Johri  
Visiting Professor
A SYSTEMATIC AND COMPREHENSIVE LIST OF INDIAN SERIALS
IN HUMANITIES AND SOCIAL SCIENCES PUBLISHED IN INDIA

A MEANS TO COMPILE AN AMERICAN UNION LIST

This is a proposal for field work in India in order to survey
some major Indian libraries and to prepare "A Preliminary Checklist
of Indian Serial Publications in Humanities and Social Sciences" as
a means to compile and publish a comprehensive union list of Indian
serials available in major American libraries.

A Union List is an essential tool for research. Its compilation
requires large funds. The Council on Library Resources granted more
than a quarter million dollars just for the preparation of the third
edition of Gregory's Union List of Serials in Libraries of the United
States and Canada.

The Union List of Learned American Serials in Indian Libraries
(ULLAS) was compiled through a generous grant of Rs. 80,000/- (16,000
dollars) by the U.S. Government in India at my request to the Indian
Council for Library Development, a corporate body created by me. I
planned and directed the project. ULLAS lists 2584 learned American
serials deposited in 165 libraries in India. Also it gives approximately
three thousand cross-references.

ULLAS is not only a union list of serials; it is a catalog as
well. Its entries contain all the information that the scholars need
and the librarians record in their catalogs of serial publications—a
unique feature. The basic entry resembles an LC main catalog card and
contains exhaustive data on the serial and then reports its pertinent
holdings in a systematic manner. With these added features, ULLAS has
become a significant means for the promotion of American studies in India.

A Union List is a product of scholarship. Only Emeneaus and Polemans
could have produced works like A Union List of Printed Indic Texts and
Translations in American Libraries, New Haven, 1935, and A Census of
Indic Manuscripts in the United States and Canada, New Haven, 1938.
Emeneau compiled his Union List through a grant from the American Council
of Learned Societies and by visiting the libraries between September 1933
and August 1934. The list includes all books in Sanskrit, Pali, Prakrit
and Apabhramsa and most of the books in the older stages of the Vernaculars
totalling 4491. In general only texts composed before 1800 A.D. have
been listed. Poleman's work was also financed by the ACLS. It is a
list of Indic texts in manuscript form, dated prior to 1800, numbering
8000, available in more than a hundred private and public libraries in
the U.S.A. and Canada. Both the lists cover only monographic works and
do not report the serial publications proposed to be included in the
projected union list.
A union list must be accurate. Second-hand information sometimes builds up false hope. An example is Margaret Case's South Asian History, 1750-1950, Princeton, 1968, reporting on p. 444 that Columbia University, New York holds "complete files" of the Tribune (Ambala). Upon inquiry it was found that Columbia University does not have the set! Data must be collected, as far as possible, by direct verification of the holdings.

I wish to prepare a "Union list of learned Indian serials in humanities and social sciences available in major libraries of the United States and Canada". No one has attempted such a project as yet. Just as ULLAS has proved to be a great source of information, the proposed union list will become an important tool for research in Indic studies. It will also be an effective tool for interlibrary loan and acquisition at the national/international level. It will enable American librarians to acquire, if not in original at least in reproduction, Indian serials that have not yet found their way into any American library and to fill in their gaps by getting the missing parts reproduced. The libraries will be helped in two ways: 1) They will acquire titles still unknown to them and 2) fill the gaps in their existing holdings.

Gregory's Union List (3rd ed.) stops with 1949. The New Serial Titles starts with 1949. Yet there are many serials which began publishing before 1949, but are acquired by American libraries only recently. There is no record for such titles in this country even if they are available. An example is the Malabar Quarterly Review (Ernakulam). There is no bibliographical tool to verify whether it is held by any American library, although some are likely to have acquired it. This is because the study of modern India in this country is a recent development. American libraries have acquired more Indic research materials during the past two decades than in the preceding two centuries! Hence there is a great need to compile such a list if research on India in this country is to be carried on effectively.

Enterprising business organizations have tried to prepare microeditions of Indic research materials, drawing primarily on the collections deposited outside India. For example, the Inter Documentation Company of Zug, Switzerland has depended upon the holdings of the India Office Library. No wonder, therefore, that most of the IDC runs are incomplete and lack some of the most valuable and rare volumes in the sets! True, India Office Library possesses one of the most extensive Indic collections under one roof; nevertheless, it represents only a fraction of what might be held collectively by a group of major libraries in India. No one has yet made any survey of what was published in India since the beginning of printing in the form of serial literature and is still available in many Indian libraries. To name just one collection: The Sanskrit University, Varanasi has been acquiring publications for 185 years. Yet its valuable collections have never been explored with this objective.
As a means to compile such a union list, it is necessary to prepare a check-list of all the serials of research value published in India at any time in the field of Humanities and Social Sciences. Unless we know what was published we cannot determine whether it is held by an American library. This work can be done most effectively and exhaustively only in India.

A compiler aspiring to prepare a check-list of the learned Indic serials available in Indian libraries must have had direct contact with India. I have worked with librarians in India, several of whom are my former students. I was in charge of the Library Branch of the India Wheat Loan Educational Exchange Program of the Foreign Service of the United States of America, under which 1.5 million dollars worth of American books were donated to about one hundred Indian libraries. My job was to visit these libraries and to advise their librarians on how to acquire American publications desired by them. I am sure, my former colleagues and students will extend full cooperation to the project.

The scholar wishing to undertake this project must be able to utilize as many Indian languages as possible, if it is desired to include serials in major regional languages. I know Sanskrit, Hindi, Gujarati, Marathi, Bengali, Punjabi and Urdu. With this background and experience, I believe I can successfully complete this project.

I have been working on this project for many years. The following sources have been used in collecting the initial data:

1. Kern Institute, Leyden. Annual bibliography of Indian Archaeology, 1926-.

5. India (Republic) Office of the Registrar of Newspapers. Press in India. New Delhi, 1964-.

7. Index India. Jaipur, 1969-.

12. Serials Catalog of the Library of the University of Missouri at Columbia.

This is only an inclusive list of the sources used. Many new lists are coming out, which are being incorporated into the masterfile.

My checklist of Indian serials is at present in card form and contains brief information on 2600 titles in Humanities and Social Sciences and some related subjects in the South Asian field. There are also four hundred cross references. The grand total of the entire file is three thousand cards. The titles (excluding those of no. 9 and 10) have already been verified with Gregory’s Union List of Serials and the New Serial Titles. Of the 1280 pre-1949 serials, 450 were found in the ULS, while as many as eight hundred were not. The list contains 1320 serials published after 1949. Of these seven hundred were found in NST while 620 were not. This fact demonstrates how inadequate and incomplete these two American sources are as far as the Indian serials are concerned.

The sources used so far do not follow any uniform system of listing, resulting in great divergence and disparity in terms of the choice and rendering of the main entry. An important step in the process of compilation will be to revise and edit the entries and bring them in total conformity with the LC System of Cataloging. This will be achieved partly by acquiring LC printed cards for as many titles as possible. But LC has cataloged only a fraction of what will finally comprise the proposed Union List. All the titles not cataloged by LC will have to be cataloged by us. In order to do a successful job we need detailed bibliographical data such as follows:

Full title; place of publication; name of the publisher; date of origin; whether still current; collation; frequency of publication; cumulative indexes/supplements; duration/suspension of publication; irregularities/peculiarities/in the numbering of volumes/series; connection with preceding/succeeding publication; sponsoring body; variations in title/imprint; issuing bodies, change in name; editors; supplements; special numbers; indexes; holdings.

I propose to visit twenty-five major Indian libraries in Bombay, Poona, Madras, Hyderabad, Calcutta, Varanasi, and Delhi, residing approximately six weeks in each city. A tentative list of the institutions follows:
BOMBAY (3): Asiatic Society; Bombay University; Tata Institute of Social Sciences. POONA (4): Bhandarkar Oriental Research Institute; Deccan College Post-Graduate and Research Institute; Gokhale Institute of Politics and Economics; Poona University. MADRAS and HYDERABAD (3): Connemara Public (State Central) Library; Madras University; Osmania University. CALCUTTA (4): Anthropological Survey of India; Asiatic Society; Calcutta University; National Library. VARANASI (3): Banaras Hindu University; Kashi Vidyapith(University); Sanskrit University. DELHI (8): Archaeological Survey of India; Delhi University; Indian Council of World Affairs; Indian Institute of Public Administration; Jamia Millia Islamia University; Jawaharlal Nehru University; National Archives; Nehru Museum and Archives.

A question may be raised: When organizations like the Indian Council of Social Science Research and the India International Centre are compiling and publishing union catalogs of serials in social sciences and the humanities, why an American should go to India to collect data on Indian serials? The answer lies in the fact that contemporary Indian librarians - at least those who are compiling union lists today - do not believe in the traditional philosophy of union catalogs. While Gregory and the British Union Catalogue of Periodicals, for example, give all the data on a serial before they start listing the holdings, the union catalogs produced in India today give the bare minimum information, which they regard adequate. The Union Catalogue produced by ICSSR itself declares in the clearest and most emphatic terms:

The Union Catalogue is primarily and necessarily only a location tool. Much historical information about a periodical which may be useful and interesting but not strictly required to identify a periodical title and locate its availability for use is therefore not given. For this reason also, no indexes are provided. For a large number of periodicals included in this volume, such information may be readily found in other Union Catalogues published outside India. (Emphasis added)

ICSSR expects western union catalogs to give full data even for those publications which originate in India!

It will be necessary to reproduce my card file in book form and make multiple copies so that it can be shared with other cooperating libraries in India. The total cost of making, say, thirty copies, including the labor of preparing the master copy, assembling, and stapling the finished product, will be approximately $6000.00. We will need $1000.00 for correspondence and postage, making a total of $7000.00 for the preparation and circulation of the preliminary check-list among the participating libraries in India.

The cost of travel will be approximately $3000.00. I will need at least $20.00 per day for board and lodge, making a subtotal of about
$7500.00 and a grand total of $17,500.00. I need $13,000.00 for the support of my family in the U.S.A. and to meet other financial commitments at home. Thus my minimum financial requirement for the total project comes to around $30,500.00.

The field work will take at least one calendar year. What I propose to prepare in India will be at its best only a beginning—a pilot project. The final work of compiling and producing a comprehensive Union List will take about three years and will require substantial funds. Nevertheless, if my preliminary work helps American scholars realize this to be a worthy project, it is probable that some national philanthropic bodies like the Council on Library Resources (which gave more than a quarter million dollars to prepare the 3rd ed. of Gregory's Union List) or the National Endowment for the Humanities (which has allocated $2,200,000.00 for the support of new research tools) may grant adequate funds to undertake the work on a comprehensive basis.

If and when we get additional funds, a working edition of this check-list will be prepared and circulated among major libraries in the U.S.A. and Canada where the titles covered by the List might be available. The participating libraries will be requested to report and add their own holdings. It will be necessary to visit representative American libraries. Consequently, there will emerge a "Union List of Learned Indian Serials in Humanities and Social Sciences available in American Libraries." A subject index can be an additional useful feature. Since my card file already locates Indian titles in other union catalogs (listed above) it also serves as an index to the major union catalogs of serials in India, England and the U.S.A.. Consequently, the final product will emerge as the "World Union Catalog of Indian Serials." Of course, it will cover only the specified subjects.

But these are plans for the future. My immediate objective is to visit India for a year in order to identify and enumerate significant Indian serial publications in humanities and social sciences, and to collect complete data for their cataloging and bibliographic description, as a means to compile a comprehensive and systematic union list of their holdings in American libraries. Such a list does not yet exist. American libraries have acquired more Indian research serials in the past two decades than in the past two centuries. They deserve unified and systematic listing. The proposed list will facilitate research on India by American scholars and save their time, money and energy. American libraries will be able to develop and strengthen their own collections on South Asia. And finally, the project will promote cultural cooperation between the U.S.A. and India.

Proposed by

Murari Lal Nagar
A Union List of Learned American Serials in Indian Libraries

Dr. Murari L. Nagar
Project Director

1966

Dear Colleague:

Many significant developments have taken place since I prepared the preceding proposal. With some financial assistance from the American Institute of Indian Studies and the Research Council of my own University I visited India for three months, from July to Sept. 1976. Limitations of finance and time could not permit me to stay any longer.

I engaged the services of two professional librarians and five library assistants and typists. We worked almost day and night--seven days a week, continuously for three months. This enabled me to collect a vast amount of additional data and to evolve an effective methodology for their organization and featuring in a systematic manner. I was successful in isolating sixty-six categories of information, or basic data elements, under which the total information could be gathered, sorted out, arranged, organized and featured for easy and effective retrieval without any loss of time or energy. I designed a mechanism (format) which I have tentatively termed Bio-Biblio-Data-Recorder. A copy is enclosed.

At the invitation of Duke University, Durham, North Carolina, in September, 1977, I attended a Conference on the Preparation of Union List. As you already know, Duke is preparing a "Union List of South Asian (primarily Indian) Government Serial Publications in Major U. S. Libraries to 1950," with a grant of $80,000 from the National Endowment for the Humanities, the University matching it with its own $109,000.

I have been working on this subject for many years. I presented my findings to the Conference. The participants were greatly impressed with my work, especially my design of the Bio-Biblio-Data-Recorder. The chief convener assured me that they would recast their entire data following the mechanism I had designed after their work of collecting the data was completed. My contribution to the subject was recognized valuable.

It is evident that the work being done at Duke is complementary and supplementary to what I have been attempting. Both are mutually exclusive; they are not at all overlapping. My work is certainly not a competitive or duplicating attempt. The two may be likened to the two wings of one and the same bird. For example, Duke will cover only the official publications of a university like its report, catalog or calendar. It will not touch its learned journal, even if its each issue contains valuable contributions from many outstanding scholars in the field. Unlike mine, the Duke Project will not include any newspapers. So when completed both will go a long way in fulfilling the needs of the entire academic community in the field of South Asia not only in this country but throughout the world. Until my work is completed, say, the bird will have only one wing!

My project has three phases. Work in India (collection of data) will represent the first phase. The organization of the data, the editorial work and its systematic computerization for storage and retrieval will comprise
the second phase. And in the third and final phase a professional librarian will visit all the major libraries in the U.S.A. and Canada to record the holdings of each and every title covered in the TULIP.

In my proposal I have spoken of getting a substantial grant for the 2nd and 3rd phases from a philanthropic body like the National Endowment for the Humanities or the Council on Library Resources. This was before Duke had received the grant from the NEH. This grant has strengthened our hope that when the time comes NEH will readily award adequate funds to Missouri so that the bird gets both the wings! Nothing could give us a greater reason to hope that the present work shall be completed than when we see both NEH and Duke joining their hands of cooperation. They have clearly demonstrated their appreciation of the value of such bibliographic undertakings in the field of South Asia Studies.

I am happy to report that the American Institute of Indian Studies has awarded me a Senior Research Fellowship to work in India for a year in order to complete the first phase of the work. My University has given me sabbatical leave for one full year. Both my wife and I leave on Sept. 15. Let it be emphasized that the first phase by itself will be an end in its own right even if the second and third phases are delayed. A systematic and exhaustive list covering detailed data on all the significant Indian serial publications in the field of the humanities, social sciences, generalia and newspapers does not yet exist. We are fully confident that if we succeed in completing the first phase, funds will be forthcoming to complete the second and third phases as well. Our success in the first phase will be a major contributing factor toward further successes in the succeeding phases. So our first task is to put all our energies together and complete the first phase. And I seek your cooperation in this great bibliographical undertaking.

Please send me your views and comments to my Indian address. I will be much obliged.

Thank you and looking forward to hearing from you soon,

Yours sincerely,

1979
The Background

This report covers the period from October 5 to December 31, 1978. I would like to preface it with some background information. I did not receive the final word on the award of the grant until late May, 1978. It took some time for the AIIS and the Smithsonian Institution to go through the formalities of getting a visa for me and in arranging the Travel Authorization as well as the issue of the air-tickets. Therefore, I could not leave Columbia until Sept. 15, although my sabbatical had already started on Sept. 1. Through the kind courtesy of the AIIS and the Smithsonian Institution, it was possible for me to have the air-tickets routed in such a way that I could visit some great educational centres of Indic Studies on the Continent, although it meant a heavy drain on my own purse. I had to spend almost two thousand dollars for boarding and lodging of my wife and myself in London, Paris, Frankfurt, Tübingen, Heidelberg, Geneva, and Rome on our way to New Delhi from Columbia, Missouri. I had to spend a good deal of my own dollars also for the shipment of my research materials, collected over a period of five years. These included 11,025 cards and ten thousand data sheets (four pages each) plus two typewriters and other weighty bibliographical aids like the Union List of Serials in the Libraries of the United States and Canada (5 over-size and heavy volumes) and similarly heavy and large 4 volumes of the New Serial Titles, 1950-1970. I had to bring two of my own typewriters, because I knew that good typewriters are not easily available in India at a reasonable rent.

To India By Way Of Europe

I visited libraries of great educational centres like the British Museum (London), Bibliotheque Nationale (Paris), University of Tübingen and South Asia Institute at Heidelberg (the last two in West Germany). It was a splendid opportunity and gave me much useful knowledge and experience. I reached India better equipped to undertake the task that lay ahead of me.

By nature this is a cooperative and collective research, of course, under my direction. It was necessary, therefore, not only to get suitable accommodation (house) for myself and my wife, where we could spend the year in adequate physical comfort, but also to set up an office and hire the necessary staff of trained librarians and experienced typists.
Mysore, India

A good deal of bibliographical work has been done in the North (of India) as compared to the South. Libraries in the latter have not yet been fully explored. There is a great potential there. I had visited Mysore almost 20 years ago as the Librarian of the India Wheat Loan Educational Exchange Program of the Foreign Service of the United States of America under which 1.5 million dollars worth of American books were given to about one hundred educational institutions of higher learning. Mysore was one of them and it had made a special niche in my heart. Therefore, I had listed the University of Mysore as one of the three institutions where I could conduct my research work. I was told that there are not many university libraries in India which are as well-equipped in the field of bibliography and library science as Mysore. My expectations came true. Mysore has proved to be a worthy choice. It provides not only good physical environment, but also a charming academic and human environment. There are nice people around and it is a pleasure to be in their invigorating company.

We reached Mysore on October 9, 1978. However, the Head of the Institution, Professor P. K. Patil, was still in Europe. The librarian-in-charge, Shri K. Balasundara Gupta, happened to be an old friend, who had assisted me a great deal during my first visit. However, he did not have all the authority to do what he could have done had he been the permanent and real authority. But, he did his best under the circumstances. It took some time for me and my wife to get acclimatized to the new physical environment after a continuous stay in the U.S.A. for more than a decade.

Problems

We had hoped and expected to get a rented house immediately upon our arrival. But there is an acute shortage of houses in Mysore. It is not real; it is somewhat artificial. On account of "rent control" people do not announce that their house is vacant and available for rent even if that is the case. They are afraid of "acquisition." We had to live in the University Guest House for 45 days. Since I was merely associated with the University and the Guest House is primarily meant for those who belong to the University, we were not the kind of guests usually accommodated in the Guest House. So we had some problem in getting ourselves accepted. Then the food
was so different from what we were used to. Consequently we became seriously sick. However, on Nov. 26, 1978, we were able to get a rented house. It is a beautiful house newly constructed with good taste and high expenditure and we were the first occupants. Also, our landlord happened to be a colleague in the library. The comforts that we enjoyed subsequently provided enough compensation for all the sufferings that we had to undergo earlier.

Preparations

One of my major problems was to hire the staff, which was not possible in the absence of the Librarian and Head of the Department of Library Science (Professor P. K. Patil) who was expected to be back earlier, but was considerably delayed in Europe. Therefore, I decided to visit Delhi, Chandigarh and Jaipur to meet my fellow-librarians there, and to assess their collections, especially in terms of those reference resources which were most essentially needed for my work. I am glad to report that Mysore is quite rich in the sources essential for my work and it can compare well with any University Library in the North as far as my needs are concerned! Once again I can say that Mysore proves to be a good choice.

I came back to Mysore on Nov. 9, exactly a month after the first arrival. By now Prof. Patil had returned. He is an experienced librarian and has had good background of American libraries and librarianship, having graduated from the University of Chicago and worked in the Library of Congress. He has also done considerable work in my field—the preparation and publication of bibliographies and union catalogues. The Union Catalogue of Periodicals in Karnataka Libraries published by the Social Science Documentation Centre of the Indian Council of Social Science Research owes much to Prof. Patil's workmanship.

The Staff

Prof. Patil helped me to select a team of suitable staff, which included some of his best students. He also provided adequate work space and furnishings. He was all along ready and eager to help not only as the Librarian of a great institution, but also as a friend and fellow-professional. But for his constant cooperation we would not have been able to make such a fine progress as we have done. The association of Prof. Patil augurs well for the future.
I must mention here with profound gratefulness the name of my wife, Sarla Devi, who has been not only my partner in life but also in the profession. Besides her graduate degrees in Education and Hindi, she holds the degree of Master of Library Science from the University of Missouri, Columbia. From the very beginning of the project, she has been helping me by devoting her time and energy and cooperating with me in my research undertaking. Hers is a labour of love. Although her present position is the Curatorship of an Art Museum, she has acquired equal mastery in the library field as well, having worked with me since 1951. But for her selfless and nameless work it would have been very difficult for me to compile the Union List of Learned American Serials in Indian Libraries during the early 1960's. Her past experience is proving very helpful in the present project.

The following librarians and typists have been assisting me in the research project:

1. Mr. C. P. Ramasesh M.A. M.Lib.Sc. Librarian Began work on Nov. 9
4. Mr. S. Krishna Murthy Has long experience of office routine Typist " Oct. 22
5. Mr. M. V. Venkatesha Murthy A fine typist " Dec. 1

Miss S. V. Savitri worked from October 19, 1978, till the end of the month only and left the job.

Mr. M. Sridhara Prabhu was appointed as Typist from Nov. 16, 1978. He worked till the end of the month, but left us because he got a permanent job. His was a superb performance.

Enthusiasm is contagious. The young workers are motivated by a desire to make this project a success. They are aware of the value of the work they are doing. They are also getting an unusually fine experience, which they believe will be of great value to them in their future work. I am happy to report that I have a very good team of assistants.
Earlier Work

In respect of the preparation and publication of the union lists of periodical publications, the Indian National Scientific Documentation Centre has done considerable work in the field of physical and biological sciences. And so has done the Social Science Documentation Centre of the Indian Council of Social Science Research in the field of Social Sciences. However, the field of the Humanities remains almost unexplored. The only work done so far is that of Wajid and Kaul. (See no. 10 on page 5 of my comprehensive proposal submitted herewith.)

Why Visit India? A Justification

Nevertheless, the work done in India so far is not fully satisfactory from the point of view of American libraries and librarianship. Making a case for my visit to India for a year, I had stated in my research proposal, submitted to the American Institute of Indian Studies:

A question may arise: When organizations like the Indian Council of Social Science Research and the India International Centre are compiling and publishing union catalogs of serials in social sciences and the humanities, why an American Librarian should go to India to collect data on Indian serials? The answer lies in the fact that contemporary Indian librarians—at least those who are compiling union lists today—do not believe in the western philosophy of union catalogs. While Gregory and the British Union Catalogue of Periodicals, for example, give all the data on a serial before they start listing the holdings, the union catalogs produced in India today give the bare minimum information, which they regard as adequate, but we do not.

The Union catalogue produced by SSDC itself declares in the clearest and most emphatic terms:

The Union Catalogue is primarily and necessarily only a location tool. Much historical information about a periodical which may be useful and interesting but not strictly required to identify a periodical title and locate its availability for use is therefore not given. For this reason also, no indexes are provided. For a large number of periodicals included in this volume, such information may be readily found in other Union Catalogues published outside India. (Emphasis added).
I have worked here in India less than two months, of course, along with my equally hard-working colleagues. Yet the results achieved in such a short period justify all the investment of time, money, and energy in coming over to India and in establishing a bibliographical laboratory and workshop in association with the Library of the University of Mysore.

Now let us see how my work differs from the one performed by Indian librarians today.

J. A. Wajid, the Project Director (Periodicals in Humanities), tells us in his "Introduction":

Each entry is catalogued according to Anglo-American Cataloguing Rules (British Text). The title of the periodical, its volume and the year of the first volume (or, the year of the volume available where the information about the first volume is not available !) imprint (i.e. place of publication and the publisher), the periodicity and the information about the supplements, indexes, etc., are given.

On page 13 of the above "Union Catalogue" appears the following entry:

        Pondicherry: Modern Press.
        Ed. by Sri Aurobindo.
        DU 5.

The name of Yogiraja Sri Aurobindo added enough value to the title to compel any serious investigator for a further search. Yet the compilers had made no effort to find more details about the title. If we believe what Wajid & Kaul tell us, they have consulted the following sources:

10. Indian periodicals, 1969, Jaipur.

The above list almost exhausts the universe of knowledge as far as our present field is concerned. We have to assume that not even one source gave any additional information with regard to the journal in reference! The entry tells us that Vol. 5 of this journal was published during the year 1918-19. That is all. This information is based only on the holding of one single library, i.e. the University of Delhi, which has only one volume of the journal in its collections. Wajid and Kaul also tell us that their compilation covers the holdings of 125 libraries located in Delhi! Not even one of them had any other volume of this valuable journal!!

We call this arm-chair compilation. The compiler does not leave even the four walls of his own office. He has collected all the available printed sources. But he does not believe in searching beyond for what is not already available in those printed sources and hence easily accessible. Certainly this cannot be called a "research", or even an honest search.

Further Justification

One simple letter to the publisher could have yielded a great deal of—almost full--information. That is what we did and immediately came the following reply:

Arya English Monthly. A philosophical review started by Sri Aurobindo on August 15, 1914 and continued without interruption until January 1921. The following declaration appeared on the inside cover page of each issue:

The Arya is a Review of pure philosophy. The object which it has set before itself is twofold:- A systematic study of the highest problems of existence; the information of a vast Synthesis of knowledge harmonising the diverse
religious traditions of humanity occidental as well as oriental. Its method will be that of realism, at once rational and transcendent, --a realism consisting in the unification of intellectual and scientific disciplines with those of intuitive experience. This Review will also serve as an organ for the various groups and societies founded on its inspiration.

The Review will publish:
- Synthetic studies in speculative Philosophy.
- Translations and commentaries of ancient texts.
- Studies in Comparative Religion.
- Practical methods of inner culture and self development.

In the Arya appeared serially most of Sri Aurobindo's important prose writings: The Life Divine. The Synthesis of Yoga. The Secret Veda. Essays on the Gita. The Human Cycle. The Ideal of Human Unity. The Future Poetry (all of which were published later in book form, many in revised editions), as well as other series and separate essays.

Seven volumes of the Arya appeared between 1914-15 and 1920-21 (each volume began with the issue of August). The seventh volume was incomplete, ending with the issue of January 1921 and including one joint issue (November - December).

Sri Aurobindo not only edited the Arya but wrote most of its articles himself. As stated above, most of his major works first appeared serially in this journal.

The library has several complete files of the Arya.

My question is: If this kind of "search" or "research" is not conducted now, when would it be done? If we are not going to do this right now and here, who is going to do it? When? Where? And how? Why leave this work to the care and attention of the future generation of librarians? Why deprive the present generation of scholars of this valuable piece of information?

Now we know for sure when this journal was started--the exact year and even month--what it contained, how long it continued, and when it ceased to exist. Not only this, we also know that Sri Aurobindo Ashram Archives and Research Library in Pondicherry has several complete files of this Arya.

I feel justified in coming over to India. This is only the beginning. But we have begun well. And well-begun is half-done, so runs a popular saying.
ICSSR-SSDC Catalogues

The Social Science Documentation Centre of the Indian Council of Social Science Research, New Delhi has published 32 statewise union catalogues so far that cover the entire country. The Centre makes a distinction between "periodicals" and "serials"... However, in many cases the same journal appears in both the categories. Hindu law journal is one specific example.

There is no co-ordination among the various catalogues produced by the ICSSR. There is no uniformity of style. There is no consistency in practice. For example, the Union catalogue of Madhya Pradesh gives the following entry:

INFA Press and Advertisers Yearbook
India

This is brevity with vengeance. If a reader approaches the title with the publishing corporate body (India News and Feature Alliance, Delhi) in his mind, he has no luck. He stands no chance of getting "His book". If he remembers the alternative, short title: "INFA Press Yearbook", even then he is out of luck. This is certainly no library service. Neither can it be called information service. We would call it deprivation from service.

However, another catalogue produced by the same organization gives additional information and a fuller entry, also providing a cross reference. The entry in the Union Catalogue of Delhi Libraries is reproduced below:

INFA Press and Advertisers Yearbook
(India News and Feature Alliance, Delhi)
Title varies: INFA Press Yearbook.

There is also a cross reference:

India News and Feature Alliance, Delhi
INFA Press and Advertisers Yearbook
See
INFA Press and Advertisers Yearbook
(India News and Feature Alliance, Delhi).

If the true objective of compiling and publishing a union catalogue of periodical publications is to help a seeker of knowledge, Delhi serves much better than Madhya Pradesh.
If the purpose of a union catalogue is just to locate a title as the SSDC would like us to believe, why does Delhi take pains in doing what Madhya Pradesh would regard only as "interesting" or "historical"?

But the question is: Where do we draw the line? What is essential and what is not? We believe in going all the way—to make the entry as full as possible—to describe the periodical publication in all its details, not omitting even a single category of information.

An Ideal Union Catalog

The reader interested in seeing what is a complete and detailed entry is referred to the Chemical abstracts service source index (1969), because this is the most exhaustive, systematic, and detailed union catalogue so far known to this writer. It provides data under the following categories of information (fields):

1. Complete title of the serial or non-serial with its official ISO abbreviation.
2. ASTM CODEN with check character.
3. Translation of foreign language titles except for French, German and Spanish.
4. Reference to any former titles and to any variant forms of the selected title.
5. Language of publication and summaries.
6. History of publication.
7. Frequency of publication.
9. Name and address of publisher or sales agents.
10. Title cataloged according to ALA/AACR Cataloging Rules.
12. Note of discontinuation.
13. Editor's names.
14. Dates and locations of meetings.
15. Library holdings information.
17. Publication date.
18. Title variation or alternative title.
19. Title abbreviation of main CASSI entry.
20. Alternate spelling or abbreviation.
21. Preferred spelling or abbreviation.

Mission in India

My mission in India was two-fold: (1) To verify the data already collected (pertaining to periodical publications in the Humanities and Social Sciences and represented in 11,025 cards) and to collect additional data on the known titles, and (2) to collect data on new titles—not found in published reference sources available in the U.S.A.—along with their fullest possible bibliographic and cataloging details. The project covers four major areas, viz. the Humanities, Social Science, Monographs in series and Newspapers.

My Work in the U.S.A.

My "Proposal" lists all the sources I had consulted in the U.S.A. They yielded 11,025 cards. We have to remember that one and the same title may occur in more than one source. Also there are many cards representing cross reference entries. So the figure (11,025) can by no means represent the total number of titles.

These cards, along with other research materials and reference sources, were delivered in Columbia, Missouri to a shipper as early as August 3, 1978 for dispatch to India. But they have not yet arrived in India, although the representative of the shipping company had assured me that they would arrive in India by the time we would reach there. Of course, this assurance was given before they received the business and the advance payment of the total shipping charges (approximately $700).

Sources Used in India

Whereas in America I had used only one union catalogue produced by the SSDC, that of the Delhi libraries, here I have seen thirty more. Some volumes have already been used. In due course of time, all these will be checked and verified to gather additional data for the known titles and all the available data for unknown titles. My card file, that is still expected by boat, contains information on all the relevant titles collected from the "Union Catalogue of Delhi Libraries". During the period under report, all
the SSDC catalogues on periodicals have been checked against the "Delhi catalogue" and all the new titles have been incorporated into our new master file.

Accessions List, India

One of my major sources in the United States (for gathering data on the serials) was the 1975 edition of the Annual Cumulation of Serials of the Accessions List, India. So 1975 became the cut-off date as far as my earlier data file was concerned. There was no information after 1975. Therefore, all the monthly issues of the List for the years 1976-78 were checked here for gathering additional information. Total data on new titles and changes in the earlier one were noted and incorporated into our file. Thus our list has become up-to-date as far as the Accessions List is concerned. These new cards will be merged into the master file after it arrives. It is expected that in about 2 weeks the long waiting period will come to an end and that we will be able to have access to all the records gathered in the U.S.A. during a long period of five years.

Information collected so far in India is represented in a total of 8,500 cards. This is gratifying. It is to be remembered that this massive collection of cards covers only the periodical publications, i.e. periodicals (proper) and serials.

Press in India, 1975

This is an exhaustive source—a class by itself. It is issued every year by the Government of India. It is authoritative. It is current too. It contains much useful information not found anywhere else. The 1975 edition lists approximately 10,000 titles. I would like to reiterate that what we are trying to prepare is a systematic and comprehensive list of Indian periodical publications in the Humanities and Social Sciences. But this proposed list is only a means. The ultimate objective—the final goal—is to compile a union list of the holdings of American libraries pertaining to the titles we collect. Our union list (TULIP) will not be merely a location tool. It will be an aid to cataloging as well as acquisition. That is the reason why we
are trying to be comprehensive and systematic and are investing so much of our time, money, and energy in producing a reliable source of reference. Of course, we cannot collect all the information on all the titles published so far. That would be a formidable task--almost impossible. Also it will not be useful to the same extent. By force of circumstances we have to be selective. Therefore, we are collecting information only as such publications which are likely to be found in American libraries. We evaluate a title in terms of its research value. We know what the American libraries ought to have, though we are not sure if they have a particular title. So one of my tasks is to go through sources like Press in India and mark those titles which should form part of our "List". Consequently, 5,000 titles (approximately) have been selected from the above publication (PII 1975), and 2,000 have been transferred on cards.

Our Methodology

If two or more sources present a conflict with regard to any data, we write to the publisher and resolve it if the problem cannot be solved otherwise. An example in reference is Manorama yearbook. While the Catalogue of the National Library, Calcutta, tells us that the publication originated in 1965, the Indian periodicals in print would want us to believe that it originated in 1966. Both cannot be right. We would not allow the conflict to remain unresolved. So we wrote to the publishers:

Our sources present a conflict as far as the year of the origin of your publication Manorama yearbook is concerned. Please let us know if it was started in 1965 or 1966. Also we would like to know if it is still being published and what is the subscription price per year.

Parenthetically it might be added here that the Accessions list, which is the most reliable source, generally gives the year of origin, but not in this instance. It merely says: "Participant subscription begins with 1966". Immediately came the reply:

The Manorama Yearbook started publication from 1965 and has been published in February every year. The price per copy from 1979 edition will be Rs. 20/-. A copy of the folder pertaining to the same is enclosed.
SSCD does not make any attempt to resolve a conflict if there is one. One and the same publication is given two different dates of origin, of course, in two different catalogues, but produced by one and the same organization, i.e. the Social Science Documentation Centre of the Indian Council of Social Science Research.

Undoubtedly ours is a search for correct, complete, exact, and exhaustive information. We may not be able to gather all the information about all the periodical publications right now and here, but we are certainly making an attempt and showing the way.

Monographs in Series

I have already noted above that so far little work has been done in the field of the Humanities with regard to the preparation and publication of the union lists. But the field of the monographs in series of Indian origin is almost virgin. No one in India seems to have done any work in this area. We are covering only three languages of India--English, Sanskrit, and Hindi. It may sound strange, but English is still the principal language of India. More publications have been issued and are being issued in English than probably all the Indian languages combined. We believe ninety-five percent of the books and periodicals used by Indic scholars in the U.S.A. would be in English. So our major emphasis is going to be on English. Hindi is the national language of India and is likely to occupy the most important position among all the regional languages of India. It will become the most widely used language of India. So its coverage is justified. Sanskrit is a world language. So it has to be covered. Remove Sanskrit and Indian culture would be reduced almost to zero as far as the classics are concerned.

It is important to observe here that a German scholar was the first one to prepare a catalogue of Sanskrit books published in series. He was followed by an American Scholar (Emeneau) whose work has been listed by me in the comprehensive proposal submitted herewith (p. 1). However, his work is selective and now out of date. It can be safely stated that more publications have been issued even in Sanskrit during the past 40 years than the past 200 years taken together.

So far we have collected information on 3,000 titles of books published in series. The following sources have been used:
1. Accessions list, India (ALBPC) - Volumes for the year 1972, 1975-78. Others not available in Mysore.

3. Publisher's catalogs.

We wrote to the publishers of monographic series and requested them to supply further details of their publications in order to supplement what we gathered from other bibliographical sources. By the end of December, we had written to 42 publishers, and 5 of them had responded by sending us their detailed catalogs, giving us further information.

Format for Data Gathering

I had already developed a data gathering sheet (in four pages) for the serials which I termed as Bio-Biblio-Data-Recorder (copy enclosed). As many as ten thousand copies were printed in the U.S.A. and sent to India by surface mail. We have just received them, thank God.

The work on the monographic series is being done for the first time. No other scholar seems to have done it before. I have developed a short form to record data on monographic publications. Five thousand copies have been printed here. A specimen is enclosed. It is hoped that all the data, both on periodical publications and monographic series, will be fed into computers after I return home.

Co-operation From Librarians

On page 4 of my comprehensive proposal I have talked about the cooperation expected from librarians in India for the project. I am gratified to say that I am receiving full cooperation from librarians as far away as Kashmir. Even the reference books which are not generally lent out are sent to me on inter-library loan by my fellow-librarians because they believe it is a good cause. Punjab University Library in Chandigarh deserves a special mention. I received a very pleasing letter from the Vice-Chancellor of the University assuring me full support if and when I go there to work. This University was one of the three institutions listed by me (for the approval of my research project) as required by the Government of India. During my last visit to Chandigarh I had a long talk with the Librarian on the subject
and this letter from the Vice-Chancellor was a sequel. After my work in the South is completed, I may go to the North and work in Chandigarh.

The Director of the American Libraries Book Procurement Center (New Delhi) has generously lent me three volumes of his *Quinquennial serials cumulation, 1976* of the Accessions list, India. These are proving very useful. Ultimately the entire union list will have to be catalogued following the AACR 2 and the *Rules* of the Library of Congress in Washington, D.C. as far as the choice and rendering of the heading, etc. are concerned. The TULIP will be an American publication in every sense of the term.

Mysore

January 15, 1979

MURARI L. NAGAR
Senior Research Fellow
American Institute of Indian Studies.
A Report on the Preparation of a Systematic and Comprehensive List of Indian Periodical Publications in the Humanities and Social Sciences as a Means to Compile an American Union List

By Dr. Murari Lal Nagar
International Studies Librarian
University of Missouri, Columbia, Missouri, USA
Senior Research Fellow

Mysore
1979
REPORT ON TULIP NO. 2

This report covers the period from January 1 to March 31, 1979. At the very outset I would like to say with pleasure that steady progress is maintained in my research project.

The Journal *Arya*

I will begin by resuming the discussion of the journal entitled *Arya* (Pondicherry, Modern Press. Ed. by Sri Aurobindo. See pages 5 to 8 of my previous report). Wajid and Kaul have listed the twenty-two sources they had "consulted" in preparing their PiH (*Periodicals in Humanities*). Of these, number 5 is the most exhaustive source of reference for the British libraries, and number 22 for the American libraries. I had none here with me in Mysore at the time. My attempts to acquire the former were still continued and my set of the latter was still on the High Seas.

So I wrote to the Librarian of the University of Delhi, which was credited to hold only one volume (5th) of the journal in reference. (I am using "was" because the only volume said to exist in the entire city of Delhi has disappeared as described later!) This is what I wrote:

> There is a journal called "Arya." You have only one volume (5, 1918/19), as reported by Wajid and Kaul in their *Periodicals in humanities*.

> I will appreciate it very much if you kindly check the British union catalogue of periodicals and ascertain if it gives further details, e.g. the year of origin and the total run (span), etc.

Promptly came their reply:

> Please refer to your letter dated 21st Dec. 78 regarding journal called 'Arya.' The information given in the British union catalogue of periodicals about the journal is as follows:

The problem remained unresolved. I wrote to them once again:

> Thank you for your letter of January 2 in response to ours of 21-12-78.

> Wajid and Kaul in their *Periodicals in humanities; Union catalogue of periodicals in humanities and newspapers in Delhi libraries* (New Delhi, 1973) have described the journal in reference as follows:
Pondicherry: Modern Press.
Ed. by Sri Aurobindo.
DU 5. [DU = Delhi University]

The journal you have described in your letter, though bearing the same title, had originated in Madras and in April 1901.

So these two are different.

Now I have received my card file from the U.S.A. It contains 11,025 cards collected over a period of five years. I have one more entry, of course, for another journal, but bearing the same title:

Arya, a monthly journal devoted to Aryan philosophy, art, literature, science, and religion as well as to western modern philosophy, 1882....

23 cm
Monthly

I assume that BUCOP has only one title as described by you. I will appreciate it very much if you kindly clarify.

The reply came with usual promptness:

We are in receipt of your letter dated 9th February 1979. The Journal 'Arya' Vol. 5, 1917/19 [sic] available in Delhi University Library according to Wajid and Kaul's Periodicals in humanities (New Delhi, 1973), is not traceable; so we cannot verify whether it is the same journal or different.

However BUCOP has only one entry under 'Arya,' the one which originated in Madras.

Long-Awaited Shipment Comes from the USA

January 26, 1979, the 30th Republic Day in India, brought to me the long-awaited shipment from the USA (see my previous report, page 10) I had delivered to the shipper in Columbia, MO, as early as August 3, 1978! At the end of December 1978, my shipping agents in Madras telephoned me that the ship carrying my anxiously awaited cargo had arrived in Madras! I flew to Madras, stayed there several days, but had to return disappointed as far as this shipment was concerned.

From Madras I had sent the following message telegraphically to my wife in Mysore:

Suitcase cleared instantaneously. Most things found.
Chidambaram shipment not yet even landed. Heavy rain
holding all operations. Cannot return soon even if want. Rail, air heavily booked for days. Confined like Robinson Crusoe! May be delayed four-five days. Rain God will control everything—Deva (Murari L. Nagar, Care Hotel Srilekha, Madras).

Upon my return to Mysore, I wrote to the Director of the American Institute of Indian Studies, New Delhi:

On December 26, 1978 I received a phone call from the Allied Shipping & Packing Co., Madras that my large shipment had arrived and that I come to Madras immediately.

Consequently I flew to Madras. Heavy rains had paralyzed every activity of loading and unloading. The passenger ship S.S. Chidambaram did not even unload its cargo! It went back to Singapore loaded with all the cargo it had brought from Singapore!

My going to Madras did not go totally in vain, because the "lost" suitcase, which (like a faithful dog) had travelled all the way home to Columbia, Missouri, was brought back to Madras after having wandered for more than two months; and I was able to take its delivery in Madras!

However, as far as the boat consignment is concerned, it was a total disappointment.

I will have to go there once again when the ship returns and my "materials" are unloaded.

Potential Benefits from TULIP

Requesting financial assistance for my visit to India for a year, I had written to the American Institute of Indian Studies:

I wish to prepare a "Union list of learned Indian serials in the humanities and social sciences available in major libraries of the United States and Canada." No one has attempted such a project as yet. Just as ULLAS has proved to be a great source of information, the proposed union list will become an equally important tool for research in Indic studies. It will also be an effective tool for interlibrary loan and acquisition at the national/international level. It will enable American librarians to acquire, if not in original at least in reproduction, Indian serials that have not yet found their way into any American library, and to fill in their gaps by getting the missing parts reproduced. The libraries will be helped in two ways: 1) They will acquire titles still unknown to them, and 2) fill the gaps in their existing holdings.

The case of the Arya presented above demonstrates how my work may prove beneficial to the American libraries. The Delhi University Library did not have the set of the Union list of serials in libraries of the United States
and Canada. When I got my own set I eagerly consulted it to see if any library in the U.S.A. held the title. Yes! There was only one library in the whole of the country which had a copy of the journal in reference! It was Harvard!! It is quite natural that the Harvard University Library, the oldest and the largest library in New England, which provided a fertile ground for the flourishing of Transcendentalism and the origin and development of Indic studies in the United States of America, should have a copy of the Aryan! But how sad it is that the library has only two volumes of the set and even those two are incomplete!

Is it too much to expect that at least one library in the United States should possess a set of this valuable journal? Let us assume that a library is willing to acquire it. But how would it know that such and such journal exists? Let us assume further that the Harvard University Library itself decides to complete its set. How would it know where does a set exist, which can at least be reproduced, so that its incomplete set is completed. Here may lie some contribution of TULIP. It will provide a complete history of the journal, as well as some information as to its location in a library in England, India, or the USA.

The Work Gets Fresh Momentum

By the time the shipment arrived, we had already prepared approximately 8,000 entries on cards, recording data pertaining to periodical publications from the sources not consulted in the USA. Thus, with the arrival of the shipment the total number of the cards in my file rose to 19,025.

Both the sets of cards were checked, verified, organized, and integrated into one single sequence. Thereafter, the total information was transferred onto the data sheets, which I have called the Bio-Biblio-Data-Recorder. This was really a major task, though it could be reported in just four lines on paper! Approximately three thousand five hundred work-hours have gone into this operation.

I am pleased to say that while on January 26, 1979 there was not even a single data sheet ready, it is estimated that by now we have at least 10,000 data sheets well prepared in our workshop. I had enclosed a copy of the blank data sheet to my previous report. It was symbolic. Now I am enclosing several data sheets duly filled in. This too is symbolic. Not that all the
10,000 data sheets so far prepared are totally correct and fully complete—ready for the press! Far from it. However, they are in a much more advanced stage than anyone could have expected them to be. Our team has worked very hard to bring the project to this developed stage. And all honor to them.

New Acquisition to the Research Tools

I have purchased a complete set (32 volumes) of the "Union Catalogues of Social Science Periodicals and Serials" published by the Social Science Documentation Centre of the Indian Council of Social Science Research, New Delhi. The original total price was Rs. 1530/-, but it has very recently been reduced, and the entire set made available at 75% discount for only Rs. 382.50, "with a view to increase the utilization of union catalogues in India."

Here are some details of the two sets in terms of the number of periodical publications described and the total number of libraries covered.

10. Punjab, Haryana and Himachal Pradesh
11. Madhya Pradesh
12. Rajasthan
13. Bihar

N.B. Evidently the three states of Orissa, Jammu and Kashmir, and Assam are not yet covered by the SSDC catalogues of serials.
How earnestly I wish that all these 32 volumes of the catalogues produced by the Social Science Documentation Centre of the Indian Council of Social Science Research were integrated into one single alphabet! At present I have to consult as many as 32 volumes, i.e. 32 alphabetical sequences to ascertain if a particular periodical publication is listed in any one of those volumes! I can only hope that some enterprising Indian librarian would take up the work of their consolidation and integration. The final product will be a mine of information and will be almost as valuable as any of the national union catalogues produced in England or the United States of America.

Problems of a Compiler

H.N.D. Gandhi and others compiled the Indian periodicals in print (Delhi, Vidya Mandal, 1973). With regard to the verification of the data they say:

In some cases it has become necessary to omit information for example when the information received was quite late, indefinite, contradictory, or otherwise unsatisfactory when experience or reliable information created a doubt as to the accuracy of the data sent to us. [Sic]

We call it Escapism. The problems and conflicts have to be resolved. Their avoidance is not going to solve them. I would like to repeat what I had stated in my previous report:

My question is: If this kind of "search" or "research" is not conducted now, when will it be done? If we are not going to do this work right now and here, who is going to do it? When? Where? And how? Why leave this work to the care and attention of the future generation of librarians? Why deprive the present generation of scholars of this valuable piece of information?

I present below a case just to show how an effort is made by us for the resolution of these problems and removal of the conflicts. My own knowledge and "experience" (to quote Gandhi and others) did not permit me to accept what another source expected me to accept.

Here are bibliographical details of an important source recently published.

Mr. Gidwani is the Director of Libraries, University of Rajasthan, Jaipur, and Miss K. Navalani is the Reader in the Department of Library and Information Science, Punjabi University, Patiala.

The compilers have vividly described the woes of the class:

A great amount of effort and labour, spread over a period of 5 years, has gone into the compilation and editing of the present volume. Several thousand letters and proformas were sent out to collect the latest information. We have been dismayed and discouraged by the poor, indifferent and occasionally negative responses from publishers, in spite of our repeated reminders (stress added). Some responses were rather unusual. By way of an example this is what the Registrar of the Calcutta High Court wrote:

With reference to his printed letter dated nil regarding 'Chronological Tables' published by the High Court, Shri N.N. Gidwani is hereby informed that this Court does not undertake to supply information to private parties and that if so advised he may arrange purchasing a copy of the latest 'Chronological Tables' priced at Rs. 1.25 only each from the Superintendent, Government Printing, West Bengal, Gopalanagar Road, Alipore, Calcutta-27.

My main purpose in describing the above source is not to belabour the difficulties in compiling such a work. That is part of the game! My object is just to show that in spite of the giant claims made by the compilers, the work is not fully reliable. I wrote to Mr. Gidwani:

As you already know, we are compiling a Systematic and Comprehensive List of Indian Periodical Publications in the Humanities and Social Sciences (including newspapers and monographic serial publications) as a means to compile an American union list.

We have a problem with regard to an entry which appears in your work, Current Indian periodicals in English: An annotated guide, (Saraswati Publications, Jaipur, 1978), as follows:

I will appreciate it very much, if you kindly let me know your source for stating that the Modern Librarian was published by the Indian Library Association and that its successors were (1) Library bulletin, (2) Abgila, (3) Journal of ILA and (4) Bulletin.

For your convenience I reproduce below the entry for the Modern Librarian from the Union list of serials in Libraries of the USA and Canada (3rd Ed. 1965):

Subtitle varies ULS

But my letter still remains unanswered. It is noteworthy that the response from the publishers to Mr. Gidwani was "poor, indifferent or negative." It was; whatever might be its nature! But the response from him to me has been totally non-existent! I did not receive any response from him, none whatsoever.

We have to guard ourselves constantly against the misinformation provided by any one of our sources. For example, one source says:

Indian librarian (1945): (i) 233 Model Town, Jullundur City, (ii) & (iv) Sant Ram Bhatia, (v) Rs. B/- (viii) 770 (S. 519 + F. 251), (ix) Agriculture

Anyone who knows the periodical publication entitled Indian librarian also knows that it does not deal with "Agriculture".

Ours is an Unusual Path

In his "Introduction" to the Union catalogue of learned periodical publications in South Asia, Pt. 1, Physical and biological sciences (New Delhi, Indian Library Association, 1953) S.R. Ranganathan tenders apologies for many faults from which his catalogue suffers. He says:

Rule Number One in classification is "Do not classify by title". Rule Number Two is "Read the book to determine its specific subject." Both these rules have had to be violated in most cases. This was due
Parenthetically I might add here that while S.R. Ranganathan did not have access to most of the periodicals, I had no time to have direct access even to one periodical publication I have listed. My information is based only on published union catalogues.

Ranganathan continues:

The tour of mine in 1949 was fully occupied in stimulating the production of returns. We could not find the travelling expenses for one of us to make a second tour to classify and catalogue each periodical directly by perusal.

Result: Probability for wrong class numbers, particularly in "A Science" and "G Biology". The factors vitiating classification had vitiated cataloguing too...

After enumerating several "faults" Ranganathan concludes:

We have thus taken great risks in publishing this catalogue with probability for all these four forms of fault.

Ranganathan also tells us why he took the risk:

We did not have the man-power or the money to visit the libraries and remove each one of these faults. Even with money and man-power, work on the removal of the faults would have delayed the publication by several more months. We decided that such faults should be risked and this necessary and long-delayed tool should be brought out quickly.

Two of the above faults relate to the area of cataloging and classification. It is absolutely essential that we examine the document physically before it is catalogued or classified. What I have done here so far, and still expect to do before I leave India, would have taken many times more energy, time, and money if I were to examine each and every title that finds a place in our comprehensive list.

Appendix I gives a brief list of the sources consulted by us so far. In my previous report I had stated that I had used some SSDC catalogues of periodicals. Since then we have examined many more. I do not think that with the time and money available to me I could have physically examined even five percent of this huge collection of periodical publications deposited in hundreds of libraries all over India.
The Problem of Names

Shakespeare might have asked: What is there in a name? So also our Upanishads have sung: Ekam sad viprā bahudhā vadanti: "The Truth is one; sages name it differently". But in our library world, the homonyms, if allowed to remain, play havoc. Only one name is to be used to denote one entity. Let us take the example of the name of a well-known university in India--The BANARAS HINDU UNIVERSITY. The name of this one single institution--individual entity--can be rendered in multiple ways. Here are certain examples:

1. Benares, India (City). Hindu University
   See Banaras Hindu University. AL: 76
2. Varnasi. Banaras Hindu University
   See Banaras Hindu University. NST
3. Hindu University, Benaras, India.
   See Banaras Hindu University. NST
4. Hindu University
   See Banaras Hindu University. AL: 76
5. Varanasi. Hindu University
   See Banaras Hindu University. AL: 76
6. Kasi Hindu Visvavidyalaya
   See Banaras Hindu University. AL: 77

The name of another important University in Western India can be rendered in several ways.

1. M. S. University of Baroda
   See Maharaja Sayajirao University of Baroda
2. Baroda (city) Maharaja Sayajirao University of Baroda
   See Maharaja Sayajirao University of Baroda
3. Baroda (city) University
   See Maharaja Sayajirao University of Baroda

We choose one form of the name, which is elected to occupy the Chair of the Heading. "Rose" may have various names in various languages, but we are going to use only one name, Rose, spelled R - O - S - E! All
the other alternative forms of the name are given cross reference entries so that the varied approaches of individual readers are satisfied.

Bhinnarucir hi lokah: "Diverse are the tastes of the people." And we have to satisfy every user.

Let it be made quite clear that the above display is not merely a play of mathematical permutations and combinations. These are actual ways in which various sources have rendered one and the same educational institution. One of the primary requirements in our task of collecting the data on serials is to detect such homonyms, choose one specific name for our list, and then gather all our data under that specific, chosen name. If various publications issued by one and the same institution are allowed to get scattered under various forms of its name, the result will be total chaos. We want to be exhaustive. We wish to get information on all the publications issued by a specific corporate body. Therefore, we make a thorough search of the literature, and collect data scattered and hidden under various forms of the name. We also wish to avoid duplication and the resultant wastage. We do not want to collect the same data twice. Therefore, as we go on collecting the data, we have also to get them organized. This takes a great deal of our time and energy; but we have no alternative.

Theoretically speaking there are three stages in the process of compilation of a union list, viz,

1) Collection of data
2) Organization of data, and
3) Publication of data.

In practice, however, the first two stages overlap, as shown above. While we collect the data, we have to go on organizing them as well, even if it may be in a tentative manner. Both the processes of collection and organization have to proceed simultaneously. These are to be performed from the very beginning, if we want to be systematic, exhaustive and non-duplicative.

Monographs in Series

Explaining my difficulties in preparing a systematic and comprehensive list of monographic serial publications, I wrote to a publisher in India (Bharatiya Vidya Bhavan, Bombay):
You will please see that what we are trying to accomplish here is somewhat unusual. We are trying to catalogue books in an exhaustive and systematic manner even without physically examining them! This is contrary to all established library procedures. But we have no choice. We cannot examine the books physically because ours is not a regular library. Hence we are adopting a method which is not ideal, but is the only method available to us. And in this task we seek your co-operation.

We have tried, through the help of your catalogues and other published sources, to fill in the available data. But our sources, including your catalogues, do not give all the data that we need. Hence it will be necessary for you to seek the services of a trained and experienced librarian on part-time basis. And as I have already indicated in my basic letter, we are willing to pay some suitable remuneration, if necessary. We don't want to load the person, already employed, with added burden without any compensation.

We are sending under separate post the data sheets featuring the available bibliographical information relative to all your books so far known to us. And please remember! We are going to list each and every publication issued by your Bhavan, which comes in our general category. We will have to exclude some. For example, a multi-volumed publication of a single author by itself will not get a place. And so will be excluded the "collected works" of a single author. Therefore, the books published in your "Gandhi series" will have to be excluded, though they may be extremely valuable in their own right.

The data sheets are filled in as correct and detailed manner as it was possible for us under the circumstances. We did not want to throw the entire burden on your shoulders. So whatever data we could gather from other sources have been recorded. And for the rest we seek your co-operation and help.

Now we request you kindly to supply the information for each title which is still lacking so that we have the record in its fullest possible form. For example, we would like to have the full name of the author (what the initials stand for); the date of birth and (if not living) the date of death as well; name of any collaborator, etc.; whether the edition is first or second, whether it is revised; the size in cms; information regarding illustrations (including maps etc.) and the Library of Congress catalogue card number, if available. In brief, we
want to have the bibliographical data to the fullest possible extent they can be obtained so that each and every column (or field) is filled.

Also we would request you to see that all your publications are grouped according to the specific series and all books in a specific series are marked with their respective serial numbers.

The Bhavan asked for Rs. 200/- as the remuneration. The amount was paid by me and the work was satisfactorily done by them.

The work on Monographs in Series (See earlier Report page 12) is deferred until the work on regular periodicals and serials is completed. I believe in God's Will. The delay in the arrival of my shipment was a blessing in disguise, because we were able to cover a good deal of ground in a new field, i.e. Monographs in Series. Also this is like an ocean, very vast indeed.

**Special Problems Presented by Indian Languages**

Words in Indian languages like Hindi bring in their own problems. The situation gets worse when the Printer's Devil plays its own mischief and adds to the problems already existing.

We came across an entry reading:

Ved Vigain.

But for the typing error, it would have read:

Ved Vigian

The PP had originated in the Land of the Five Rivers, the Punjab. If it had originated in Maharashtra or Gujarat, it would have been spelled as "Vidnyāna". There, it would have also been rendered as "Vignān"! But the Hindi word विज्ञान rendered systematically would be spelled only as "Vijnāna".

We found another title reading: "Gain daan". We went back to the source. It read: "Gian daan". Rendered correctly it would have spelled "Jñānadāna". So from "Gain daan" we had to reach "Jñānadāna" (gift of learning). Such examples can be cited ad infinitum.

Readers of SSDC series of union catalogues are well familiar with their specific style. These catalogues use no transliteration at all! For example, on page 386 of UDC, we find the following entry:

Prajna; Banaras Hindu University Journal.
In the absence of any diacritical marks, it is difficult to say whether the original reads:

\[
\begin{align*}
\text{Prajña} \\
\text{or} \\
\text{Prañña}
\end{align*}
\]

It could also be read as Prajña.

One may find in a popular novel a word like "Pragya" or "Pradnya", because it is written the way it is pronounced by a group of people. But when we write 'prajña', in a scientific, systematic, scholarly work, i.e. try to use the specific letters intended to render the word in its most systematic and scientific way, we cannot do away with the diacritical marks. AL puts "Prajña" in Roman script, while putting at the same time (プラジャ) in Devanagari script. This is the right way.

We try to ascertain the correct original form of a word and try to transliterate it following the international standards.

**Canons of Cataloging**

There are certain "canons of cataloging" that must be observed in cataloging any periodical publication. And we do observe them.

The first is the "Canon of context." This canon ordains that each item of information appearing in any field subsequent to the first one (i.e. the Heading) is to be interpreted in the context of the first field, i.e. what is at the very top (head) or beginning.

The second canon called the "Canon of currency" demands that the main entry or heading should use the current or the latest name of an author, corporate body, or PP. Other names will receive cross reference entries to satisfy the varying needs of the various users of the List, who may approach it through the names not current, or not preferred by the compiler under the command of the Canon.

Another canon, the "Canon of consistency" dictates that we must observe absolute consistency, if we want to avoid chaos, and if we don't want to create unnecessary problems for our users.

**Staff**

Two librarians and one typist were added to the staff during the period under report. One librarian left us at the end of March. This was a great loss. Our investment in terms of the salary is running quite high.
Our Visitors Provide Inspiration

Shri Narinder Agarwal, Librarian, South and West Asia Library, University of Illinois, Urbana, on a visit to India in search of material for his "English Writings in South Asia" came and saw our TULIP Workshop. He was simply amazed when he saw the large number of our staff and was further pleased to see the nature and extent of the work done by us so far. We have had many visitors from other countries like Great Britain, Germany and Denmark. They inspired us by their encouraging words.

Many scholars frequently visiting the Library of the University of Mysore have come to me and openly remarked that they have seldom seen such hard-working people as our staff are. According to them our work has inspired them!

A Passing Remark

I have not yet made any systematic work in terms of counting the number of PP's originating from a particular place, but it seems more publications come out of JAIPUR than any other city of comparable size. Of course, Delhi, Bombay, Madras are different. They are metropolitan cities and form a separate class.

Accessions List, India

An American librarian can have satisfaction in the feeling that the most exhaustive, current, and helpful list of Indian periodical publications, issued in India today, is prepared and published by an American organization, viz., the American Libraries Book Procurement Center of the Library of Congress in New Delhi.

On March 20, 1979, I wrote to Mr. Jerry R. James, the Director of the above Center:

The lack of reference resources here really impedes my progress. Having developed a very extensive collection of South Asia reference works in my Library during the past 13 years, I feel like fish out of water in Mysore. I had to bring my own sets of NST, ULS and your ALQC 76. You will be pleased to know that your AL is the most extensively used reference work here in our project! I have collected four sets of your '76 cumulation (one kindly lent by you); but still they prove inadequate, because we are now ten!

A Report on the Preparation of a Systematic and Comprehensive List of Indian Periodical Publications in the Humanities and Social Sciences as a Means to Compile an American Union List

By Dr. Murari Lal Nagar
International Studies Librarian
University of Missouri, Columbia, Missouri, USA
Senior Research Fellow
American Institute of Indian Studies
c/o Mysore University Library
Mysore 570006 India

University of Mysore
Mysore
1979
The Problem

In my previous report I stated that it was necessary for me not only to collect the data but also to organize them in a systematic manner so that duplication could be avoided and consistency as well as uniformity maintained. This additional work put a tremendous pressure on my team. However, this was not the end of our problems. There was the question of security and safety of the extensive research data collected over a long period. The completed data sheets totalled 15,000. The twenty thousand cards collected over a period of six years were discarded one by one as the data on them were transferred onto the data sheets following the prescribed method. Consequently, these data sheets remained the only record available to us.

These data sheets had to be transported ultimately from India to USA by ship. What would happen to the TULIP research project if the entire shipment was lost in transit? Not even a heavy insurance could bring the data back if once lost. And in India no insurance company was willing to take the risk on a commodity the value of which could not be determined in terms of rupees and paisa! To me the data were valued at least $50,000. To the company it meant nothing!

Alternatives

Originally I had planned to bring a portable microfilm camera and use it for collecting data from various libraries in India. But the plan could not be implemented due to administrative and other reasons. In order to secure the safety of the total collection—so I thought—I could get the entire record microfilmed, although this would have merely secured its safety. It could not have solved the total problem because it was essential for me to carry the entire collection of data from library to library in order to correct and complete the information already recorded and to collect additional information if available.

I made inquiries with the only microfilming agency available in Mysore—the Oriental Institute Library—which had a microfilm camera and which could microfilm the collection for me. But the price quoted by them was extremely high—almost twenty thousand rupees. I could not afford it.
The Solution

The only alternative then left to me was to get the entire data copied by means of typewriters. There was an additional advantage. In my previous report I had mentioned my original plan to have my own car and to carry the entire collection from library to library in it. But I could not do it. Then I consulted a car rental agency in Mysore to ascertain if it was possible to hire a car for about three months. The price, approximately Rs.6000 per month, was once again beyond my reach. If I had to carry the information already collected to the libraries, there was no alternative but to transform it into a condensed form. Each data sheet consisted of four pages of good quality paper and the total weight exceeded 1,000 kgs.

The Prototype

Thus there was no choice but to get all the data typed. We accomplished this stupendous task in a short period of five weeks only. Four typists worked continuously for the entire period and produced almost one thousand pages, typed solidly, single-spaced, with practically no margins, recording the entire data relative to 10,000 titles. Titles of marginal value were eliminated; and so were eliminated those which were found inadequate or incomplete in terms of the required essential details. Also were taken out all the data sheets on "Monographs in Series," numbering about 4,000.

These 1,000 sheets, beautifully bound in three large volumes, are now valued at approximately $50,000. It may be interesting to observe that during my entire trip in and through India lasting two months, I never allowed these volumes to get out of my sight. I carried them on my shoulders from place to place. They were never checked in during the flights!

Good Bye Mysore

The Summer is the worst part of the year in India to travel. However, we had no choice. Originally, I had planned to visit libraries and to collect the data throughout the year of my stay there. However, the atmosphere in Mysore was so enchanting, invigorating, promising, and productive, and the facilities provided by the Librarian of the Mysore University Library were so great, that I decided to stay there as long as it was possible; and now I can say that I was right. The work which the TULIP team accomplished in a short period of eight months would have taken at least 24 months had it been a
regular operation in an institution. The team had acquired a kind of missionary zeal. Truly it is said: "Enthusiasm is contagious." They wanted to make this project a success. It was not merely a job for them. It was a challenge and they met it quite well.

**Quest for Cooperation**

Little time was left before I was required to return to the USA and to my library. The duration of the AIIS grant was only for a year. And so was that of my sabbatical leave. I had to cover the South, East, North, and West, all the four regions of India, in a short period of less than three months. It would be impracticable even to think that I could stay in one particular library long enough to cover its total collection. And each city in India, which I visited, had more than one library, with collections so extensive and valuable that each might have kept me engaged for 6 to 8 months. What I here mean by "work" is to catalog fully their collection of the titles that fall in my field of interest. Yes, we have to catalogue their collection according to our own standards, since they have not catalogued their collections the way we want, in full details. It is but natural. Our respective objectives differ. They have the collections in the library which their readers can physically consult, while we want to have a complete picture of their collections right between the covers of TULIP! They can be brief, very brief, but we have to be exhaustive and detailed.

Under the circumstances, the maximum I could achieve was to examine their collections and to establish personal contacts with the librarians so that they are made aware of the value of my project. After all, what I am preparing is only a systematic and comprehensive list of Indian periodical publications in the humanities and social sciences. This work could be as much theirs as it could be ours. And the librarians of India whom I met during my all-India study tour were able to realize this fact. They have promised full cooperation in the future. This was the greatest gain.

**Study Tour: Madras**

The TULIP Office in Mysore was closed on May 19, 1979. The first library centre I visited was Madras. I stayed there for about 12 days and worked in the Library of the University of Madras as well as the Connemara Public Library, which is now the State Central Library, and which houses one of the most valuable collections in India. My job was to examine the
collections of periodical publications and to enrich my records of TULIP.

The strength of a chain is determined by its weakest link. And so is the strength of a union catalog of periodical publications determined by its weakest constituent element. TULIP can be correct only to the extent the individual catalogues or the records of libraries incorporated in it (TULIP) are correct. As an example, I can cite a periodical publication entitled the Journal of the Anthropological Society of Bombay.

TULIP record contains the following data:

There was a conflict. The printed catalogue of the Connemara Public Library stated that the journal started in 1901. Our source said that it started in 1886. It was necessary to resolve the conflict. I went to the stacks and examined the journal set. Volume one was no doubt published in 1901, but it contained the minutes of the proceedings of the meetings held in 1886. So both the dates were right. What our source had taken was the year covered; what they had taken was the year of publication. But their catalogue did not mention this fact. With all due respect to the cataloguer of this Library, we can safely say that he did not do a complete job. After the Society had completed 50 years of its existence, that is, in 1936, it published a cumulative index to the previous 50 volumes. This year (1936) was also their Golden Jubilee year. The date of origin of the periodical publication can be only 1886 and not 1901 also because the Index to the Journal for the years 1886-1936 clearly puts 1886 as the beginning year. That was the intention of the publishers as well. This case gives an idea of our problems and how they were resolved.

The Preface to the Index says:

The Society was founded on the 7th April, 1886...It holds a meeting every month in the Bombay Branch, Royal Asiatic Society, Town Hall, Fort, Bombay, where papers are read and discussed, and it publishes a journal twice a year. It has published 119 numbers during the past fifty years.

The individual volumes available in the stacks yielded the following information:

Volumes 1-3 were published in 1901.
Volume 4 covered the years 1895 through 1899. All these were published without any imprint date.
Volume 5 covered the years 1899 [ ]-1901, with no imprint date.
Volume 6 (earlier pages missing) contains nos. 1-8.
Volume 7 covers the years 1904 to 1907, with no imprint date.
Volume 8 covers 1907-1909.
Volume 9 covers 1910 to 1912, with no imprint date.
Volume 11 covers 1917-20 (June) published in 1921.
Volume 12 covers nos. 1-8, 1920 (July), 1921-1923--T.P. missing.
Volume 15, no. 7, 1936-37, published in 1940.

In 1946 the journal started a new series beginning with v.1, no. 1.
Publication was resumed after a lapse of six years. The last issue published
in 1940 was no. 7 of vol. 15. The size and number of pages are very much
reduced. V.2, no. 1, 1947. V.3, no. 1, 1949. There is a gap. V.7, no. 1,
March 1953.

The above record prepared from the holdings of the Library cannot be
the final word on the subject. It is not based on any of their permanent
records like the Accessions Register, or Shelf List. It is constructed from
what I found on the shelves. Now, many volumes could be "out" or "misshelved."
Recently, I saw the published Catalogue of the Bombay University Library. It
says that volume one of the journal in reference was published in 1886. This
Library has volume 15, no. 7 of which is dated 1940. The new series was
started in 1946. The last issue held by the Library is no. 1 of v. 10 and
covers the year 1956. But this record does not tell us whether the publica-
tion has ceased or is still continuing. The Accessions List of the PL 480
Program tells us that their subscription started with no. 1 of v. 11 dated
1959. The only way to ascertain whether the periodical is still current or
not is to write to the publishers, if at all we can locate their address and
if they are still in business.

Similar situation prevails in many other libraries I visited. Let us
take another important library in the South. They have a title: Archaeolog-
ical Survey of India. [Reports] New imperial series. Their holdings begin
with vol. 6! Then vols. 13-14 are missing. Volumes 26-27 missing. So their
set is not at all complete.

Here is another title: Archaeological Survey of India, Memoirs. They
have vols. 1-24, 26-35, 37-45. The last volume, i.e. 45th (held by them) is
dated 1932. So this set too is not at all complete. They have no reference service. They don't have any verifiable and authentic official record of their holdings of back volumes of periodical publications.

An honest and frank librarian of one of the most prestigious libraries in India told me that their growth had been simply quantitative; and not at all qualitative. He said: "If we have volume one and three, and don't have volume two, nobody has bothered to look into it and inquired: 'Why don't we have volume two?' We have never tried to build the collection. We have just added volumes to our Library."

One of the richest libraries I could not explore (due to lack of time in Madras) is the Library of the Historical Research and Archives Department. It is located in front of the Egmore Railway Station in a beautiful, imposing building. The Officer-in-Charge of the Library knows his job as well as his collection, which is not yet fully catalogued. The Library is more than 100 years old and contains many sets of serials which any major library in the world would like to possess. Before leaving Madras I explored the possibilities of continuing this work on a long-term basis, provided the funds were made available. The response was favorable. I left Madras with the hope that some day in the future I would be able to come back, or depute one of my colleagues, who would continue the work I had initiated.

Hyderabad

My next stop was Hyderabad. The librarian there had studied at the Graduate Department of Library Science of the University of Delhi, where I had the privilege of teaching. Here in Hyderabad the librarians have a group called the "Academy of Library Science and Documentation." They invited me to deliver a talk. My topic was: "Why I am back to my homeland?" This gave me an excellent opportunity to present my ideas on the subject to a learned audience and to have their reactions. After the talk was over, there were searching questions from the group. I answered to their satisfaction. As a result, I found that the theory I have been propounding about the union catalogue is sound, that is, the union catalogue is a catalogue of catalogues. It is not merely a combined list. It must give complete biographical and bibliographical data of a periodical publication before the holdings of libraries are listed. Subsequently, I met a specialist in INSDOC. He has been working with the union catalogues for the last twenty years. When I explained to
him my approach toward the union catalogue, he approved it and said: "You are combining the features of a directory with those of a union catalogue." And he put it exactly what I am doing. My union catalogue is not merely a list; it gives all the information regarding the present as well as the past of a given title before it presents the details of the holdings.

In my first report I had mentioned that CASSI is the best union catalogue I have ever seen. This head of the INSDOC Union Catalogue Division agreed with me. The latest volume of the CASSI was already on his desk, right near him. He took it out and said with gratitude: "Tell them (in the USA) that we are using it constantly." I left INSDOC with my theory having been further strengthened.

Another University Library I visited in the Central South has no separate record of their holdings in the Periodicals Section or anywhere else. They have only a typed (and very much disorganized) list of current titles. Their General Catalogue, in many cases, does not even have the specification of the place of publication. Under the common heading of "Periodicals" (in the subject part) they have listed all the periodicals, but these cards represent added entries only and so naturally they are very brief indeed. One has to go to the main entry to get further details. Even the main entry is sometimes very meagre. Of course, these added entry cards have the call numbers, but they can be only a means to locate the journal on the shelf and nothing else. For example, the titles Accountant and Accountants Journal, without the mention of the place of publication, did not provide enough encouragement to me for further search. I could not decide whether they are of Indian origin or not.

It is interesting to note that as soon as I entered the Periodicals Section, I asked the Librarian-in-Charge: "Do you have a list of periodicals in your Library?" He brought to me the latest edition of Ulrich's Periodicals Directory!

Hyderabad did not offer much. However, I was able to get a copy of a list of Hindi periodicals I had been searching for quite some time past. It was prepared by one Mr. Bankat Lal Ojha, a pioneer in the field of bibliography of Hindi periodicals. Ojha has collected more than three thousand rare first issues (i.e. volume 1, no. 1) of Hindi newspapers and journals. His collection is valuable and should be a major source of information for any historiographer of Hindi journalism. Unfortunately, I could not meet him.
But the book which he had published was available in the Library of Osmania University. Through the kind courtesy of its Librarian, I was immediately able to get a photo-copy made. Here are its bibliographical details:

This is a unique work. It covers the period from 1826 to 1925 and presents bibliographical details of some 2000 newspapers and magazines under the following heads: Title, size in inches, place of publication, annual subscription, price of one issue, name of the editor, publisher, year of inauguration, year of cessation, language if other than Hindi, number of copies printed, and any other valuable information.

All of Ojha's bibliophilic activities have been private and personal. They are not institutionalized. I don't know if his collection is still intact and to whom it would pass. Leading Hindi lovers and patriots have acknowledged the valuable work done by Ojha and have paid him glorious tributes. I don't know if Vol. 2 of this bibliography was ever published. Ojha had plans to publish a "Directory of Hindi Newspapers" on a regular basis, but I don't think it was ever published.

Calcutta

Our next stop was Calcutta. The National Library, Calcutta, is of course the National Library. I had heard about it; I had read about it. I had also visited it once. But I had never seen its collections and so I had never realized how valuable they were. It is certainly one of the best libraries in the world as far as Indian publications are concerned. I met the present Director, Professor A.K. Das Gupta. He was quite impressed with my work and promised to provide full facilities. I spent 14 days in Calcutta, most of them in this Library. Here again my time was limited and the work was unlimited. The Head of the Periodicals Division also was very helpful. He promised co-operation on continuous basis.

Both CNLC (SSDC) and the INSDOC catalogue of the National Library were prepared by the local librarians, hired for this special assignment, under the sponsorship of the Bengal Library Association and the IASLIC. Payment was made by the SSDC and INSDOC, the two sponsoring bodies.

It was very hot in Calcutta. And there were the frequent power failures. It was not possible to accomplish much under such adverse circumstances.
The National Library has a card catalogue marked "Alphabetical List of Unprocessed and Unbound Periodicals (in European languages). Titles only. Available in loose issues on requisition by titles."

Many of these have been acquired under the "Delivery of Books Act." It also contains foreign titles as well as subscriptions. I used it, but only a fraction.

This Library has a good collection of Hindi periodicals. I got its entire card file copied by a typist, of course, on payment. Also I was able to locate another valuable publication listing Hindi periodicals. It was the work of my former colleague, Shri Akhil Vinay. I got the book xeroxed at the National Library. The work copied at Osmania and the lists copied in Calcutta provide an extensive coverage of Hindi periodicals published in India.

Varanasi via Kathmandu

From Calcutta we went to Kathmandu, Nepal, and thence to Varanasi. The Banaras Hindu University Library had little to offer. There was hardly anything spectacular. Their catalogue, even the main one, is very sketchy. Ranganathan's Classified Catalogue Code prescribes that the year of origin of a periodical publication shall be given. But here it is a pure guess work. For example, v.7 = 1957. So v.1 = 1950! That is how their logic works. But this is not correct. We don't have to deduct "7," but only "6." We have to count 1951 onwards. In some cases they have given full recording, e.g. N52; but in many cases only N5, and in some cases simply N. They have made no attempt whatsoever to go beyond what they had in hand. They never tried to find the year of origin.

Under the same law, no imprint is to be given. So our search for the imprint would be in vain as far as libraries like BHU are concerned. We have to go to the stacks and examine the volumes physically. But the heat and dust are awful. Some of these stacks are dark and dingy. I am not talking especially of the BHU Library. Conditions of working in the stacks are generally not good anywhere, especially during the hot summer months. I wish I had reversed the time-table, i.e. visited the libraries during the winter and worked at the desk in Mysore during the summer months.

To come back to the usefulness or otherwise of the catalogues of libraries like BHU: They have given no data, practically nothing. In fact the Periodicals Section of the Acquisitions Department is much more useful,
because it has better records. But they relate mostly to current periodical publications. Still these records are useful to a greater extent. For example, I was shown a letter from the Gandhian Institute of Studies, Varanasi, dated Feb. 26, 1979. It stated:

Re: Interdiscipline

Publication had to be suspended after v. 12, 1975. And in its place another journal entitled Gandhian perspectives is being published since 1978. Ann. sub. Rs. 24/-.

One Reader's Adviser at the BHU Library recommended that in order to get the information on the date of origin of a particular periodical publication, even of Indian origin, one should consult Ulrich's. No further comments are necessary.

One of our greatest needs is to ascertain the date of origin of a periodical. The Bharatiya Kala Bhavan (Indian Art Centre) of the Banaras Hindu University has a unique collection of the first issues of a great many periodicals published in India. The collection has not yet been catalogued. It contains primarily publications in Hindi, but there are other languages, too, including English. The Director of the Centre promised full cooperation and agreed to get his collection catalogued following our standards if some funds were made available.

I also visited the Nāgarī Pracārini Sabhā, the oldest and probably the most potent organization for the propagation of Hindi. This institution has rendered more service to the cause of India's national language than any other single institution in India. It has a very fine library of Hindi publications, probably the largest one in India. One can find complete runs of many Hindi periodicals in this Library. Here again the Director assured me that he would be happy to lend his support for any project of mutual interest. It is possible, for example, to get the entire set of the Nāgarīpracārini patrikā microfilmed in cooperation with this Library.

The Capital of India

The last place I visited was Delhi, the capital of India. And undoubtedly it is now one of the greatest capitals of the world of learning. How earnestly I wish I had more time! Delhi can offer plenty of opportunities for the development and enrichment of TULIP. However, my time was limited. I worked in the Delhi University Library for several days and got further strengthening of my belief that I must return to India as soon as circumstances
permit. When I return, I should have my own conveyance, a fully equipped microfilm camera, plenty of microfilms, a good typewriter, and an efficient stenographer. I should be prepared to work continuously for a minimum of three years. This will be the best way--the only way--to complete the work of collecting the data which I have just begun.

I returned to Columbia, Missouri, on July 26, 1979.

To Sum Up

A team of ten persons worked continuously for eight months, my wife and I working more than ten hours a day, seven days a week, with no holiday or respite whatsoever. It was an extensive operation, involving a substantial financial investment. The AIIS had very generously provided me with Rs.23,000 for travel and research assistance. And my University had granted me a sum of Rs.26,000. Thus we invested a total of Rs.49,000 just in professional assistance. The results achieved fully satisfied us and justified this investment. We used more than forty union catalogues and other sources to collect the data.

I had employed four professional librarians and four experienced typists. Now this entire team could not be taken to all the major libraries in such a vast country as India is. And there was the problem of office space, equipment, and furniture. Not all the libraries would have been able to provide the kind of facilities Mysore University Library had done. We did the best we could do under the circumstances. My original plan of personally visiting all the libraries and collecting data from each one of them would have probably taken me several years!

Even if I had taken the entire team to all the major libraries in India, maybe the total work might have been accomplished in eight months, but the total cost would have been at least eight lakhs of rupees. Where was such a huge amount, and who would have given it?

Looking Forward

The work accomplished so far leads us to some natural questions--where do we go from here? What should be our next step to achieve in full the objective of collecting exhaustive data from all the major libraries in India, to supplement and enrich what we have already collected, and to solve the problems that are still baffling us?

I have been giving serious thought to the above questions for some time past and have come to the following conclusion. My earlier report stated that
the most authentic, systematic, comprehensive, and current list of Indian
publications, both monographs and serials, is the Accessions list prepared and
published by the American Libraries Book Procurement Centre of the Library of
Congress in New Delhi. However, the Accessions list cannot cover all that
India publishes. And India publishes quite a lot. Also, there is a time lag
between the publishing of the first issue of a journal and its listing in the
Accessions list. The ALBPC has to acquire a publication before it can be
accessioned. And above all, it is merely a "List" and not a "Catalogue!"

The National Library, Calcutta, on the other hand, gets most of the
Indian publications under the Delivery of Books Act. In India there are one
or two other libraries too which receive extensive collections of Indian
periodical publications, but these libraries are less equipped. Of course, it
is left to the publisher whether he sends his publication to the National
Library or not. Generally speaking, he does not see any tangible reward
because it is not regularly (or invariably) listed anywhere by the National
Library. However, the National Library does get such publications, though
their intake, let it be reiterated, is not truly exhaustive or comprehensive.
Parenthetically it might be added that if the current publications are regu­
larly (and invariably) listed in a Bibliography, the publishers might feel
encouraged to send their first issues, with the result that the coverage might
become exhaustive. The Head of Acquisitions Division at the National Library
has promised cooperation on continuous basis.

Indo-American Library Cooperation

It is hoped that TULIP can be kept up to date and current if some funds
are made available to the National Library informally and continuously. Here
is a field for close cooperation between India and America in the field of
bibliographical control.

As far as the work on retrospective basis is concerned, ALBPC can do
nothing. However, this too could be done and quite successfully too through
cooperation if we want to enrich our American libraries with the past embodi­
ments of knowledge of India and try to fill in the gaps in our library holdings.
We must cooperate. The American Libraries Book Procurement Centre, New Delhi,
began its Accessions list only in 1962. Any publication prior to this date
cannot be covered by AL. For the earlier publications, for the acquisition,
or merely the knowledge of the earlier publications, we have to make special
efforts as shown in the series of my reports. The case of the "Arya" discussed earlier provides enough justification for continuing the work I have brought to this advanced stage.
APPENDIX I
Specimens of TULIP Entries
(Master List)

BRAHMA sewak. v.1- 1972- (02.1)--Yamuna nagar (04)--Bhisham Dutt Bakshi (05)--714 Model Colony (08.2)--Rs. 6.00 p.a. (09)--m (13)--Hindi (14)--Same as 05 (24.1)--Misc. community journal (30)--PII-75 (34.2)

BRAHMACHARIN; (02.1)--a monthly magazine devoted to Hindu social, religious, and moral reforms, containing original articles on religion, philosophy, literature, science, art, etc. of modern and ancient India. v.1- Mar. 1900- (02.2)--Jessore (04)--Publication ceased? (07)--v.1-8 (3/4); Mar. 1900-Mar./Apr. 1907 (15)--ULS (34.2)--IOL UCAP (34.3)

A Work Sheet

NLCC lists the title exactly as follows:

AICC Economic review: fortnightly journal of the economic and political research department of the All-India Congress Committee, New Delhi. New Delhi, AICC. 19- Fortnightly.

It is to be noted that the NL does not try to go back and trace the history. No mention of the date of origin, change of title or change of frequency, either.

The typed card in the card catalogue has the same dates that are given in 1956 catalogue (printed) which I have used. However, it was published in 1956. Further additions have been noted in the card. For example, printed cat. stops with 1956, and says "In progress." Typed card has the last entry (originally typed): v. 14-18, 1962-57.

Comments on "Economic review" by a staff member:

FT (fully typed) entry* says v. 1-24 (4); 1979-70, but the UCD gives v. 1-24 (14): 1949-70. Again there is inconsistency in the field 2.4 regarding the duration of the earlier title, i.e. 1940-70. FT entry says: "Absorbed by 'Political and economic review'," but actually it should be "succeeded by" since it is the continuation of the same title with new volume numbering. "Political and economic review" is given in the 31.4 in FT entry, instead of 31.5 (see also). For this title there are three x-refs which are absolutely wrong because the main entry is under "Economic review".

1) Indian National Congress. All India Congress Committee
   a) Economic review
   b) AICC economic review See AICC economic review
2) Fortnightly economic review

There is no x-ref from "AICC economic review" to "Economic review".

The above entry says: "Succeeded by Political and economic review on Mar. 2, 1970," but the latter title began on Mar. 9, 1970. [See the entry for "Political and economic review"][n.1- Mar. 9, 1970]

*(This specific field bears UCD as the source).
Why a Master List?

A traditional way of compiling a union catalog of periodical publications is to acquire from the participating libraries a list of what they hold--titles as well as the details of their runs--and then to combine these "returns" into one sequence. This method may be practicable if we prepare a general union list, listing every title, irrespective of the geographic origin, subject, or language. But when our objective is to prepare a special union catalog of only such periodical publications that have originated in a particular country like India, the above method may not work because the libraries do not divide and arrange their serials catalogs by regions. In the latter case, the staff of the participating libraries will be required to go through their entire serials file--from A to Z--and select those titles which are found to be, say, of Indian origin. For the participating libraries, this is time-consuming, laborious, and expensive undertaking. No library might be willing to undertake this additional responsibility, especially in modern days when libraries are experiencing financial crises and are feeling the staff shortage more than ever before.

Under the circumstances, a helpful way to prepare a union catalog limited by a geographical area would be to compile a master list--as exhaustive, authentic, and systematic as possible--and depute the staff of the Union Catalog Project Office to visit the participating libraries and record their holdings of the respective periodical publications.

Such a master-list can also be used for "cross checking" or "reverse checking" the serials files of some representative large libraries in the country to see if the master-list omits any significant title and if any new title can be added, because the universe of knowledge is unlimited, and the human resources are limited. Also because no list can ever be made so comprehensive that it totally exhausts the subject universe. Once we have our master-list, we can go through any other file or source, efficiently and systematically, and incorporate what our file might have omitted.

We have stated above that we must have our own master-list, as exhaustive, authentic, and systematic as it can be made. If we rely upon the varying methods of cataloging followed by individual libraries, we run the risk of creating chaotic conditions. For example, we may list one and the same
title more than once. Here is an example.

UCD lists one and the same title in two different places, once by the name of the sponsoring body, and then again by the title.

1. Employers' Federation of India
   Industrial bulletin. Bombay, India 1955-1960;
   v.7, 1961+
   MID 1955-1960;
   8-13 (1967)  
   (7)  UCD p. 146

2. Industrial bulletin
   (Employers' Federation of India)
   Bombay, India. v.10, 1964+
   DIE 10 17(1971)+
   (15-16)  
   ILS 14-17 (1971)+
   (10-13)  
   SIR 11-18 (1922)+  UCD p. 230

No, we cannot rely upon the vagaries of individual catalogers of the participating libraries, especially of those which do not follow one method. We must do our own cataloging if we want to achieve consistency, secure uniformity, and avoid the kind of pitfalls exemplified above.

By now we have finished only the first phase. The final objective is yet to be achieved; and in order to do it we have to complete the second phase. For the purpose of securing a substantial grant from a philanthropic corporate body like NEH or CLR we will have to create a favorable atmosphere. And in order to do this we have to invite the opinions of our peers and superiors in the profession. Unless and until we generate strong support it may be difficult to get an external grant.

If we want to secure professional support for the project, it is essential that the work done so far is made available, for examination, to those critics whose support we are seeking. They cannot evaluate the work and pass their judgment without examining what has already been accomplished.

The typing of the three volumes in Mysore was done in a great rush. It was merely a means to secure the safety of the thought-content. It will be necessary to revise and edit the Master-list and then get it copied by an expert typist so that it can be reproduced in multiple copies.

It will take at least two years before the project is completed and the final form of the TULIP is made available to the libraries in this
country. In the meantime, librarians in India, especially those who have seen
the work in progress, are quite anxious that the work done so far be published
and made available to them. Even in this country, the present work will have
adequate reference value. This need can be met only if we have multiple
copies.

The cost of preparing the master-copy by a typewriter will be the only
major investment in this process. Once it is made ready for reproduction,
getting a few extra copies would not cost much. It is estimated that the
total cost would be approximately $5,000. It is requested, most earnestly,
that this amount be granted so that the Master-list is neatly typed and repro-
duced by an economical method in at least three hundred copies.
THE UNION LIST OF INDIAN PERIODICALS (TULIP)

A proposal to publish the research findings of a year's work in India on sabbatical, funded by University of Missouri-Columbia and the Smithsonian Institution.

This is a request for $4,500 to match on a stipulated 3:1 basis a grant from the Association of Asian Studies (AAS) (attachment 1). The funds requested from the Research Council, together with the $1,500 AAS grant, will be used to publish the results of the first phase of research on "The Union List of Indian Periodicals" (TULIP). This is a valuable research tool even at this first stage of development. It will serve, however, as the foundation for a much larger and extensive undertaking, which will need substantial funding of approximately $250,000 and two to three years to accomplish (see attachment 2). Funding at this time for publication of the preliminary version of TULIP is essential for eliciting the broad-based support and enthusiasm necessary to secure the large scale funding. Consequently this grant request is for an immediately valuable academic project as well as "seed" money for a major new national and international resource for research and reference.

Submitted herewith (in one copy) is my Report on the Preparation of a Systematic and Comprehensive List of Indian Periodical Publications in the Humanities and Social Sciences as a Means to Compile an American Union List. A Digest accompanies each copy of this proposal. Pages 3-4 of the Report present a summary of the Project. Our University and
the Federal Government have already invested nearly $50,000 on it. A minimum of 10,000 work-hours, spanning many years, have gone into this operation. If we do not want all this huge investment of time, money and energy to remain fruitless, it is essential that we continue the Project and complete it. Attachment 2 shows in brief the extent of the work yet to be done and the money needed to reach the ultimate goal.

The final three pages of the Report justify why a Master List is required. It will be an interim or instrumental measure, enabling us to secure major funds (approximately one quarter of a million dollars) from national philanthropic agencies like the National Endowment for the Humanities or the Council on Library Resources. The former gave $80,000 to Duke for a related project and the latter approximately $270,000 to prepare the third edition of Gregory's Union List.

But this is a long and arduous path. It may take several years. In the meantime we have to keep on working. We have to create a favorable climate. One of the most effective means for achieving this objective will be to revise, edit and reproduce the Master List and make it available not only to subject specialists in this country but also overseas so that they can examine and evaluate the work accomplished so far and advise if it can be improved. I would like to have their views not only on the nature and content of the data collected but
also on my specific methodology for their organization and computerization to facilitate an expeditious access. The support of specialists may lead us to our final destination.

Pages 97-98 of the Report describe the circumstances which compelled us to prepare a typed copy of the "Master List" and the conditions under which the work was done. It was merely a means to secure the safety of the valuable data. Some substantial checking, verification, revision and editing work will have to be done before the list is duplicated and presented to the leading specialists.

It is estimated that the total cost of producing 100 copies of the Master List, constituting 1020 pages, will come to at least $6,000. There are approximately 10,000 entries, specimens of which appear on pages 110-111 of the Report. The work of checking and verification by a semi-professional technical assistant and careful and correct typing by an experienced typist will cost a minimum of $3,500. This remuneration is quite reasonable in view of the highly intricate nature of the bibliographical entries (samples enclosed). This payment will also include thorough proof-reading.

The cost of duplicating 100 copies by Econo-copying-method and perfect binding will amount to $2,200. We will need approximately $300 for clerical assistance in correspondence work and mailing, etc. Thus our total financial requirement comes to a minimum of $6,000.
It is gratifying to report that the Association of Asian Studies (the foremost American organization of Asian specialists in this country) has awarded us a grant of $1,500 on 3:1 matching basis. Although small in terms of our total needs, the amount is large in terms of grants awarded by the Association. For it says: "This is one of the larger grants made, and is therefore a strong indication of our interest in your project and of our rating of its importance." However, the Association has made it quite clear that if we are not able to raise the matching funds, the grant of $1,500 will be withdrawn.

Completion of this segment of the total project will be a major step toward the final goal. Pages 5-11 of the Report display some letters of appreciation from the UMC faculty who have seen the Master List. Enclosed are additional letters received from specialists outside Columbia who have studied the Report but have not yet seen the Master List. These documents describe persuasively the benefits of the Project. It is hoped that a perusal of the Master List, which in itself is an effective tool for research and reference, will enable the leading specialists here and abroad to express their views, and hence to demonstrate to the granting agencies the real value of the total project, convincing them to provide the total funds for eventual consummation of the final union list.
It is requested that the matching amount of $4,500 be provided so that the AAS grant is utilized and the first phase of the work is completed.

Proposed by

Murari L. Nagar
Librarian, International Studies
University of Missouri-Columbia
Dr. Murari Lal Nagar
Librarian, International Studies
University Library
University of Missouri
Columbia, MO 65201

Dear Dr. Nagar:

The Executive Committee reviewed your proposal titled Project Tulip at its December 2nd meeting and agreed to award $1500.00, as a 3:1 matching grant, in the hope that with this concrete support you will be able to obtain the balance of funds needed from other sources. This is one of the larger grants made, and is therefore a strong indication of our interest in your project and of our rating of its importance. Assuming that you will be able to match our $1500 3:1, this would give you a total budget of $4500, or at 2:1 of $4500. With help from your university, we trust that this can be managed, and we wish you success.

Please keep us informed. Obviously, if you are unable to find additional funding and are consequently unable to continue the project, we would assume that this $1,500.00 grant would have to be withdrawn.

Yours sincerely,

Rhoads Murphey
Secretary-Treasurer
SURVEY OF SOUTH ASIA SERIALS
IN AMERICAN RESEARCH LIBRARIES

It is proposed to survey South Asia serial collections in major American research libraries and to prepare a comprehensive union list.

The U.S. owned rupees supporting the highly valuable PL 480 acquisitions from India are likely to be exhausted soon and the participating libraries may be required to spend their own dollars. The Committee on South Asia Acquisitions of the Association of Research Libraries is assessing the likely impact of this major shift. The time has come (for these libraries) to review the past acquisitions and to determine the future course of action. It may be necessary to evolve a co-operative acquisition program and share the resources. A concerted effort can be made by the group to fill the gaps.

The proposed survey and census will facilitate any systematic future planning, and also strengthen the existing library collections. The list will serve as a significant research tool for cataloging and inter-library loan. This is a global undertaking. Its beneficial results will extend far beyond the boundaries of North America.

We have been working on this Project for the last six years. The U.S. Government (through its Smithsonian Institution) and the University of Missouri-Columbia have already invested approximately $50,000. In 1978/79 a team of
ten librarians and assistants worked in India and collected data on 10,000 Indian serials. If we do not want all this huge investment of time, money, and labor to remain useless, we must continue the Project and complete it.

Our objective is to give complete biographical and bibliographical data not only of the past of a periodical publication, but also of its present. Thus TULIP will be a union catalog as well as a directory. Since it will give citations to major union catalogs published in the U.S.A., U.K. and India, it will also be an index to world union catalogs. Considerable progress has been made in the first phase.

I have developed a distinctive computer program which will also help other union list projects. The UMC School of Library and Information Science has agreed to cooperate in testing and perfecting the program.

The extensive data collected so far have to be verified, cataloged, edited, organized and converted into machine-readable form, with possibilities for deriving indices by subject, region, language, etc. This second phase of the Project will take a year and will cost approximately $125,000.

The third and final phase will involve visits to major American research libraries to examine their collections and
to record their respective holdings. We will also add to our list such titles as are held by them, but are not yet represented in our data base. This work may easily take one more year and entail an expenditure of $125,000.

The UMC possesses all the potential to provide a permanent base of operations for a comprehensive data base and a clearing house of information for a national union catalog of South Asian periodical publications available in major research libraries of the U.S.A. and Canada.
May 15, 1980

I strongly recommend that Dr. Murari Lal Nagar's proposal be supported. It is a vital project for South Asian studies and library development both in the United States and for specialists throughout the world. The Association of Asian Studies already has extended a matching grant of $1,500, one of the largest amounts awarded in my memory, an act which in itself suggests the importance of the work for the field.

The preparation of additional copies of the Serials Master List would be in itself a major contribution--Dr. Nagar has worked for years in preparation of the raw data, and its editing and circulation therefore is imperative. I know from personal experience that many individuals and institutions await such documents, and their preparation and circulation from UMC certainly would bring attention and honor to our campus. In addition, the list would set the stage for another much larger proposal, the preparation of a definitive union list of South Asia serials and sets available in North America. I can think of no more important work than this for South Asian studies and bibliographic control.

We are most fortunate to have Dr. Nagar in the library and working on this innovative project. For a relatively small amount of money, the Council can fund a permanent resource useful both for local faculty and staff and also for a national and international audience. That is a great reward for a $4,500 contribution.

Yours sincerely,

N. G. Barrier
Professor
June 25, 1980

Dr. Murari L. Nagar
Librarian IV
International Studies,
UMC Library
3A31 Ellis Library

Dear Dr. Nagar:

It is a pleasure to inform you that the Research Council has approved your recent application in the amount of $4,500. In a few days you will receive information about the procedures to be followed and the number of the account set up for your project.

Publications resulting from this grant should carry an acknowledgment which reads as follows:

"This research was funded by a grant from the Research Council of the Graduate School, University of Missouri-Columbia."

Also, a copy of any publication should be forwarded to the Dean of the Graduate School.

We are pleased to be able to support your work, and, if I can be of any assistance in the administration of your grant, please let me know.

Sincerely yours,

Richard L. Wallace
Associate Dean for Research

P.S. With this letter, I am returning your book entitled "A Report on the Preparation of a Systematic and Comprehensive List of Indian Periodical Publications in the Humanities and Social Sciences as a Means to Compile an American Union List."
The Union List of Indian Periodicals
(Tulip)
A Digest

This is a digest of my extensive Report on the preparation of a systematic and comprehensive list of Indian periodical publications in the Humanities and Social Sciences as a means to compile an American union list. Columbia, Mo, University of Missouri, 1979. 115 pp. It is intended to serve as a "Background Paper" to disseminate information regarding the Project Tulip to create a not-for-profit corporate body which could generate a favorable climate and be able to raise substantial funds to complete this project of international significance.

The Project TULIP is the first attempt ever made towards the preparation of a systematic and comprehensive list of Indian periodical publications in the Humanities and Social Sciences in English, Hindi and Sanskrit as a means to compile a union list of their holdings in major American libraries. It will include Newspapers and Monographs in Series.

During the year 1978/79, a team of six professional librarians and four experienced typists worked vigorously in Mysore (India) for about ten months. Approximately forty union catalogs and lists of periodical publications, produced in India, England, and the USA, as well as some individual library catalogs, were digested, and extensive basic data pertaining to about 12,000 titles were collected on about 20,000 cards. These were checked, verified, organized, and integrated into one alphabetical sequence. Thereafter the total information was transferred onto the data sheets, which I have developed and termed as the "Bio-Biblio-Data-Recorder", each BBDR constituting four pages of 8 1/2 x 11" size, and having provision for recording data relative to as many as one hundred categories of
information or data elements. The completed data sheets numbered about 15,000, and weighed approximately 1000 kgs. Since this heavy load could not be transported from library to library all over India for further search and research, the total information was typed on paper. This compact form of the Master-List comprises 1,020 pages and features information in 10,000 plus entries. These sheets, beautifully bound in three volumes, represent at least ten thousand work hours and are valued at approximately $50,000.

One of the most useful features of the List is that, unlike the traditional union catalog, it does not locate a title in a specific library but in some major union catalogs which report the title in reference. Therefore, it is an index to the world union catalogs—a union catalog of union catalogs. Now a reader interested in a specific title need not wade through, say, two scores of union catalogs to locate where in the world the desired title is available, but he can consult only this TULIP and locate which specific union catalog reports the title sought by him.

The data reported in the Master List (still a prototype) pertain not only to the "past" of a periodical publication, but also its "present", the very recent one. Thus, it is a combination of a union catalog and a directory of periodicals, since it combines the features of both.

Thus TULIP has already become the most comprehensive, systematic, authentic, and authoritative list of Indian periodical publications ever compiled and brought out in a book form, wherein each publication has received the most exhaustive bibliographic description and definitive cataloging treatment.

The Basic Proposal (1975)

A union list is an essential tool for research. Its compilation requires large funds. The Council on Library Resources granted more than
a quarter million dollars just for the preparation of the third edition of Gregory's Union List of Serials in Libraries of the United States and Canada.

The Union List of Learned American Serials in Indian Libraries (ULLAS) was compiled through a generous grant of Rs. 80,000/- (16,000 dollars) by the U.S. Government in India at my request to the Indian Council for Library Development, a corporate body created by me. I planned and directed the project. ULLAS lists 2584 learned American serials deposited in 165 libraries in India. Also it gives approximately three thousand cross-references.

ULLAS is not only a union list of serials; it is a catalog as well. Its entries contain all the information that the scholars need and the librarians record in their catalogs of serial publications--a unique feature. The basic entry resembles an LC main catalog card and displays exhaustive data on the serial and then reports its pertinent holdings in a systematic manner. With these added features, ULLAS has become a significant means for the promotion of American studies in India.

A union list is a product of scholarship. It must be accurate to be of any use. I wish to prepare a "Union list of learned Indian serials in the humanities and social sciences available in major libraries of the United States and Canada". No one has attempted such a project as yet. Just as ULLAS has proved to be a great source of information, the proposed union list will become an important tool for research in Indic studies. It will also be an effective tool for interlibrary loan and acquisition at the national/international level. It will enable American librarians to acquire, if not in original at least in reproduction, Indian serials that have not yet found their way into any American library, and to fill in their gaps by getting the missing parts reproduced. The libraries will be helped in two
ways: 1) They will acquire titles still unknown to them, and 2) fill the
gaps in their existing holdings.

Gregory's Union List (3rd ed.) stops with 1949. The New Serial Titles
starts with 1950. Yet there are many serials which began publishing before
1949, but are acquired by American libraries only recently. There is no
record for such titles in this country even if they are available. An
example is the Malabar Quarterly Review (Ernakulam). There is no biblio­
graphical tool to verify whether it is held by any American library,
although some are likely to have acquired it. This is because the study
of modern India in this country is a recent development. American libraries
have acquired more Indic research materials during the past two decades
than in the past two centuries! Hence there is a great need to compile
such a list if research on India in this country is to be carried on
effectively.

Three thousand select Indian titles (a representative sampling) were
checked against two major American sources. Of 1280 pre-1949 serials, 480
(i.e. only 37.5%) were found in the ULS, while as many as eight hundred
(or 62.5%) were not. The list contained 1320 serials published after 1949.
Of these seven hundred (or 53%) were found in NST while 620 (or 47%) were
not. This fact also demonstrates how inadequate and incomplete these two
American sources are as far as the Indian serials are concerned.

The available sources generally do not follow any uniform system of
listing, resulting in great divergence and disparity in terms of the choice
and rendering of the main entry. An important step in the process of com­
ilation will be to revise and edit the entries and bring them in total con­
formity with the AACR-II. All the titles not cataloged so far by LC or
other networks will have to be cataloged by us. In order to do a successful job we need detailed bibliographical data.

No one has yet made any survey of what was published in India since the beginning of printing in the form of serial literature and is still available in some of the major libraries of the country. This field work can be done only in India. It will take at least one calendar year. What I propose to prepare in India will be at its best only a beginning—a pilot project. The final work of compiling and producing a comprehensive Union List will take about three years and will require substantial funds. Nevertheless, if my preliminary work helps American scholars to realize that this is a worthy project, it is probable that some national philanthropic bodies like the Council on Library Resources or the National Endowment for the Humanities may grant us adequate funds to undertake the work on a comprehensive basis and to complete it.

But these are plans for the future. My immediate objective is to visit India for a year in order to identify and enumerate significant Indian serial publications in the humanities and social sciences, and to collect complete data for their cataloging and bibliographical description, as a means to compile a comprehensive and systematic union list of their holdings in American libraries. Such a list does not yet exist. American libraries have acquired more Indian research serials in the past two decades than in the past two centuries. They deserve unified and systematic listing. The proposed list will facilitate research on India by American scholars and save their time, money and energy. American libraries will be able to develop and strengthen their own collections on South Asia. And finally, the project will promote cultural cooperation between the U.S.A. and India.
The Duke Project

At the invitation of Duke University I attended a Conference on their union list project in September 1977. Duke is preparing a "Union List of South Asian (primarily Indian) Government Serial Publications in Major U.S. Libraries to 1950," with a grant of $80,000 from the National Endowment for the Humanities, the University matching it with $109,000 of its own.

The Duke Project is complementary and supplementary to what I have been attempting. Both are mutually exclusive: they are not at all overlapping. My work is not at all a competitive or duplicating attempt. The two may be likened to the two wings of one and the same bird. For example, Duke will cover only the official publications of a university like its report, catalog, or calendar. It will not touch its learned journal, even if its each issue contains valuable contributions from many outstanding scholars in the field. Unlike mine, the Duke Project will not include any newspapers. When completed both will go a long way in fulfilling the needs of the entire academic community in the field of South Asia not only in this country but throughout the world. Until my work is completed, the bird will have, say, only one wing!

My project has three phases. Work in India (collection of data) will represent the first phase. The organization of the data, the editorial work and its systematic computerization for record-building and retrieval will comprise the second phase. And in the third and final phase professional librarians will visit some major libraries in the U.S.A. and Canada to record their holdings of each and every title covered in the TULIP.

In my proposal I have spoken of getting a substantial grant for the 2nd and 3rd phases from a philanthropic body like the National Endowment for the Humanities or the Council on Library Resources. This was before
Duke had received the grant from the NEH. This grant has strengthened our hope that when the time comes, NEH will readily award adequate funds to Missouri so that the bird gets both the wings!

However, the first phase would be an end in its own right even if the second and third phases are delayed. A systematic and exhaustive list reporting detailed data on all the significant Indian serial publications in the field of the humanities and social sciences, generalia and newspapers does not yet exist. We are fully confident that if we succeed in completing the first phase, funds will be forthcoming to complete the second and third phases as well. Our success in the first phase will be a major contributing factor toward further successes in the succeeding phases.

**Earlier Work in India**

The Indian National Scientific Documentation Centre has done considerable work in the field of physical and biological sciences. And so has done the Social Science Documentation Centre of the Indian Council of Social Science Research in the field of Social Sciences. However, the field of the Humanities remains almost unexplored. The only work done so far is that of Wajid and Kaul (Periodicals in Humanities. New Delhi, 1973).

**Why Visit India? A Justification**

However, the work done in India so far is not adequate from the point of view of American scholarship. Making a case for visiting India for a year, I had argued in my research proposal:

A question may arise: When organizations like the Indian Council of Social Science Research and the India International Centre are compiling and publishing union catalogs of serials in social sciences and the humanities, why an American librarian should go to India to collect data on Indian serials? The answer lies in the fact that contemporary Indian librarians--
at least those who are compiling union lists today—do not believe in the western philosophy of union catalogs. While Gregory and the British Union Catalogue of Periodicals, for example, give all the data on a serial before they start listing the holdings, the union catalogs produced in India today give the bare minimum information, which they regard as adequate, but we do not.

The union catalogue produced by SSDC itself declares in the clearest and most emphatic terms:

The Union Catalogue is primarily and necessarily only a location tool. Much historical information about a periodical which may be useful and interesting but not strictly required to identify a periodical title and locate its availability for use is therefore not given. For this reason also, no indexes are provided. [This is an implicit criticism of INSDOC which does provide indexes]. For a large number of periodicals included in this volume, such information may be readily found in other union catalogues published outside India. [Emphasis added].

Although by December 31, 1978 I have worked in India for about two months only, of course, along with my equally hard-working colleagues, yet the results achieved in such a short period justify all the investment of time, money, and energy in coming over to India and in establishing a bibliographical laboratory and workshop in association with the Library of the University of Mysore.

Now let us see how my work differs from the one performed by Indian librarians today. Wajid tells us:

Each entry is catalogued according to Anglo-American Cataloguing Rules (British Text). The title of the periodical, its volume and the year of the first volume (or, the year of the volume available where the information about the first volume is not available) imprint (i.e. place of publication and the publisher), the periodicity and the information about the supplements, indexes, etc., are given.

On page 13 of the above "Union Catalogue" appears the following entry:

The name of Yogiraja Sri Aurobindo adds enough value to the title to compel any serious investigator for a further search. Yet the compilers had made no effort to find more details about the title. According to Wajid and Kaul, they had consulted 22 sources. Their list almost exhausts the universe of knowledge as far as our present field is concerned. We have to assume that not even one source gave any additional information with regard to the journal in reference! Their entry tells us that vol. 5 of this journal was published during the year 1918/19. That is all. This information is based only on the holding of a single library, i.e. the University of Delhi. The compilers also tell us that their compilation covers the holdings of 125 libraries located in Delhi! Not even one of them had any other volume of this valuable journal!!

We call this arm-chair compilation. The compiler does not leave even the four walls of his own office. He has collected all the available printed sources. He does not believe in searching beyond for what is not readily available in those printed sources and hence not immediately accessible. Certainly this cannot be called a "research", or even an honest search.

One simple letter to the publisher could have yielded a great deal of—almost full—information. We did this and got more than what we could have aspired for.

Of the twenty-two sources listed by Wajid and Kaul number 5 is the most exhaustive source of reference for the British libraries, and number 22 for the American libraries. I had none here with me in Mysore at the time.

So I wrote to the Librarian of the University of Delhi, which was credited to hold only one volume (5th) of the journal. (I am using "was"
because the only volume said to exist in the entire city of Delhi has disappeared as described later!) This is what I wrote:

There is a journal called "Arya". You have only one volume (5, 1918/19), as reported by Wajid and Kaul in their Periodicals in humanities.

I will appreciate it very much if you kindly check the British union catalogue of periodicals and ascertain if it gives further details, e.g. the year of origin and the total run (span), etc.

Promptly came their reply:

Please refer to your letter dated 21st Dec. 78 regarding journal called "Arya". The information given in the British union catalogue of periodicals about the journal is as follows:

The problem remained unresolved. I wrote to them once again:

Thank you for your letter of January 2 in response to ours of 21-12-78.

Wajid and Kaul in their Periodicals in humanities (New Delhi, 1973) have described the journal in reference as follows:

Pondicherry: Modern Press.
Ed. by Sri Aurobindo.
DU 5.

The journal you have described in your letter, though bearing the same title, had originated in Madras and in April 1901.

So these two are different.

Now I have received my card file from the U.S.A. It contains 11,025 cards collected over a period of five years. I have one more entry, of course, for another journal, but bearing the same title:

Arya, a monthly journal devoted to Aryan philosophy, art, literature, science, and religion as well as to western modern philosophy, 1882...
23 cm. Monthly
I assume that BUCOP has only one title as described by you. I will appreciate it very much if you kindly clarify.

The reply came with usual promptness:

We are in receipt of your letter dated 9th February 1979. The journal 'Arya' vol. 5, 1917/19 [sic] available in Delhi University Library according to Wajid and Kaul's Periodicals in humanities (New Delhi, 1973), is not traceable; so we cannot verify whether it is the same journal or different.

However, BUCOP has only one entry under 'Arya', the one which originated in Madras.

The response from the publishers was very detailed. Here is the summary:

Arya English Monthly. A philosophical review started by Sri Aurobindo on August 15, 1914 and continued without interruption until January 1921. The following declaration appeared on the inside cover page of each issue...

In the Arya appeared serially most of Sri Aurobindo's important prose writings: The Life Divine, The Synthesis of Yoga, The Secret Veda, Essays on the Gita, the Human Cycle, The Ideal of Human Unity, The Future Poetry (all of which were published later in book form, many in revised editions), as well as other series and separate essays.

Seven volumes of the Arya appeared between 1914-15 and 1920-21 (each volume began with the issue of August). The seventh volume was incomplete, ending with the issue of January 1921 and including one joint issue (November-December).

Sri Aurobindo not only edited the Arya but wrote most of its articles himself. As stated above, most of his major works first appeared serially in this journal.

The Library has several complete files of the Arya.

My question is: If this kind of "search" or "research" is not conducted now, when would it be done? If we are not going to do this right now and here, who is going to do it? When? Where? And How? Why leave this work to the care and attention of the future generation of librarians? Why deprive the present generation of scholars of this valuable piece of information?
Now we know for sure when this journal was started—the exact year and even month—what it contained, how long it continued, and when it ceased to exist. Not only this, we also know that Sri Aurobindo Ashram Archives and Research Library in Pondicherry has several complete files of this *Arya*.

**Potential Benefits from TULIP**

The case of the *Arya* presented above demonstrates how my work may prove beneficial to the American libraries. There is only one library in the whole of the United States of America which has a copy of the journal in reference! It is Harvard!!

It is quite natural that the Harvard University Library, the oldest and the largest library in New England, which provided a fertile ground for the flourishing of Transcendentalism and the origin and development of Indic studies in the United States of America, should have a copy of this *Arya*. But how sad it is that the library has only two volumes of the set and even those two are incomplete!

Is it too much to expect that at least one library in the United States should possess a set of this valuable journal? Let us assume that a library is willing to acquire it. But how would it know that such and such journal exists? Let us assume further that the Harvard University Library itself decides to complete its set. How would it know where does a set exist, which can at least be reproduced, so that its incomplete set is completed. Here may lie some contribution of TULIP. It will provide a complete history of the journal, as well as some information as to its location in a library in England, India, or the USA.

**Categories of Information**

If the true objective of compiling and publishing a union catalogue of periodical publications is to help a seeker of knowledge, Delhi serves
much better than Madhya Pradesh.

If the purpose of a union catalogue is just to locate a title as the SSDC would like us to believe, why does Delhi take pains in doing what Madhya Pradesh would regard only as "interesting" or "historical"?

But the question is: Where do we draw the line? What is essential and what is not? We believe in going all the way—to make the entry as full as possible—to describe the periodical publication in all its details, not omitting even a single category of information.

An Ideal Union Catalog

The reader interested in seeing what is a complete and detailed entry is referred to the Chemical abstracts service source index, because this is the most exhaustive, systematic, and detailed union catalogue so far known to this writer.

Undoubtedly ours is a search for correct, complete, exact, and exhaustive information. We may not be able to gather all the information about all the periodical publications right now and here, but we are certainly making an attempt and showing the way.

Monographs in Series

So far little work has been done in the field of the Humanities with regard to the preparation and publication of the union lists. But the field of the monographs in series of Indian origin is almost virgin. No one in India seems to have done any work in this area. A German scholar was the first one to prepare a catalogue of Sanskrit books published in series. He was followed by an American scholar (Emeneau). However, his work is selective and now out of date. It is a fact that more publications have been issued even in Sanskrit during the past 40 years than in the past 200 years taken together.
Problems of a Compiler

H.N.D. Gandhi and others compiled the Indian periodicals in print (Delhi, Vidya Mandal, 1973). With regard to the verification of the data they say:

In some cases it has become necessary to omit information, for example when the information received was quite late, indefinite, contradictory, or otherwise unsatisfactory when experience or reliable information created a doubt as to the accuracy of the data sent to us. [sic]

We call it Escapism. The problem and conflicts have to be resolved. Their avoidance is not going to solve them. Also we have to guard ourselves constantly against any misinformation provided by any of our sources.

The Problem of Names

Shakespeare might have asked: What is there in a name? So also have sung our Upanishads: Ekam sad viprā bahudhā vadanti: "The Truth is one; sages name it differently." But in our library world, the homonyms, if allowed to persist, play havoc. Only one name is to be used to denote one entity. We choose one form of the name, which is elected to occupy the Chair of the Heading. "Rose" may have various names in various languages, but we are going to use only one name, Rose, spelled R-O-S-E!

One of the primary requirements in our task of collecting the data on serials is to detect homonyms, choose one specific name for our list, and then gather all our data under that specific chosen name. If various publications issued by one and the same institution are allowed to get scattered under various forms of its name, the result will be total chaos. On one hand, we want to be exhaustive. We wish to get full information on all the publications issued by a specific corporate body. Therefore, we make
a thorough search of the literature, and collect data scattered and hidden under various forms of the name. On the other hand, we wish to avoid duplication and the resultant wastage. We do not want to collect the same data twice. Therefore, as we go on collecting the data, we have also to get them organized. This takes a great deal of our time and energy; but we have no alternative.

Theoretically speaking there are three stages in the process of compilation of a union list, viz. 1) Collection of data 2) Organization of data and 3) Publication of data.

In practice, however, the first two stages overlap. While we collect the data, we have to go on organizing them as well, even if it may be in a tentative manner. Both the processes of collection and organization have to proceed simultaneously. These are to be performed from the very beginning, if we want to be systematic, exhaustive and non-duplicative.

Special Problems Presented by Indian Languages (Transliteration)

Words in Indian languages like Hindi bring in their own problems. The situation gets worse when the Printer's Devil plays its own mischief and adds to the problems already existing. We try to ascertain the correct original form of the title (name, etc.) and try to transliterate it following the international standards.

Canons of Cataloging

There are certain "canons of cataloging" that must be observed in cataloging any periodical publication. And we do observe them.

Our Visitors Provide Inspiration

Shri Narinder Agarwal, Librarian, South and West Asia Library, University of Illinois, Urbana, on a trip to India in search of material for his "English Writings in South Asia" visited our TULIP Workshop. He was pleasantly
surprised to see the large number of our staff and the nature and extent of the work done by us so far. We have had many visitors from other countries like Great Britain, Germany and Denmark. They inspired us by their encouraging words.

Many scholars frequently visiting the Library of the University of Mysore have come to me and openly acknowledged that they have seldom seen such hard-working people as our staff are and that our work has inspired them!

America's Contribution

An American librarian can have satisfaction in the feeling that the most exhaustive, current, and helpful list of Indian periodical publications, issued in India today, is prepared and published by an American organization, viz., the Library of Congress Office in New Delhi.

The Prototype

There was no alternative but to get all the data typed. We accomplished this stupendous task in a short period of five weeks only. Four typists worked continuously for the entire period and produced almost one thousand pages, typed solidly, single-spaced, with practically no margins, recording the entire data relative to 10,000 titles. Titles of marginal value were eliminated; and so were eliminated those which were found inadequate or incomplete in terms of the required essential details. Also were taken out all the data sheets on "Monographs in Series", numbering about 4,000. These 1,000 sheets, beautifully bound in three large volumes, are now valued at approximately $50,000.

The work which the TULIP team accomplished in a short period of eight months would have taken at least 24 months had it been a regular operation.
in an institution, where there is no deadline and the work is routine. Our team had acquired a kind of missionary zeal. Truly it is said: "Enthusiasm is contagious." They wanted to make this project a success. It was not merely a job for them; it was a challenge and they met it quite well.

Quest for Cooperation

Little time was left for me before I was required to return to the USA and to my Library. The duration of the AIIS grant was only for a year. And so was that of my sabbatical leave. I had to cover the South, East, North, and West, all the four regions of India, in a short period of less than three months. It would be impracticable even to think that I could stay in one particular library long enough to cover its total collection. And each city in India, which I visited, had more than one library, with collections so extensive and valuable that each might have kept me engaged for 6 to 8 months. What I here mean by "work" is to catalog fully their collection that falls in my field of interest. Yes, we have to catalogue their collection according to our own standards, since they have not cataloged their collection the way we want, in full details. It is but natural. Our respective objectives differ. They have the collections in the library which their readers can physically consult, while we want to have a complete picture of their collections right between the covers of TULIP! They can be brief, very brief, but we have to be exhaustive and detailed.

We cannot rely upon the vagaries of individual catalogers of the participating libraries, especially of those which do not follow our method. We must do our own cataloging if we want to achieve consistency, secure uniformity, and avoid the kind of pitfalls that are exemplified above.
Under the circumstances, the maximum I could achieve was to examine their collections and to establish personal contacts with the librarians so that they may cooperate with us in future. After all, what I am preparing is only a systematic and comprehensive list of Indian periodical publications in the humanities and social sciences. This work can be as much theirs as it can be ours. And the librarians of India whom I met during my all-India study tour were able to realize this fact. They have promised full cooperation in the future. This was the greatest gain.

The strength of a chain is determined by its weakest link. And so is the strength of a union catalog of periodical publications determined by its weakest constituent element. TULIP can be correct only to the extent the individual catalogues or the records of libraries incorporated in it (TULIP) are correct.

Before leaving Madras I explored the possibilities of continuing the work on a long-term basis, provided the funds were made available by us. The response was favorable. I left Madras with the hope that some day in the future I would be able to come back, or depute one of my colleagues, who would continue the work I had initiated.

I was convinced that my theory of the union catalogue is sound, that is, the union catalogue is a catalogue of catalogues. It is not merely a combined list. It must give complete biographical and bibliographical data of a periodical publication before the holdings of libraries are listed. I met a specialist in INSDOC. He has been working on the union catalogues for the last twenty years. When I explained to him my approach toward the union catalogue, he approved it and said: "You are combining the features of a directory with those of a union catalogue." And he put it exactly what
I am doing. My union catalogue is not merely a list; it gives all the information regarding the present as well as the past of a given title before it presents the details of the holdings.

I spent 14 days in Calcutta, most of them in the National Library. Here again my time was limited and the work was unlimited. The Head of the Periodicals Division was very helpful. He promised full cooperation on a continuous basis.

Both CNLC (SSDC) and the INSDOC catalogue of the National Library were prepared by the local librarians, engaged for this special assignment, under the sponsorship of the Bengal Library Association and the IASLIC. Of course, the payment was made by the SSDC and INSDOC, the two sponsoring bodies.

This Library has a good collection of Hindi periodicals. I got its entire card file copied by a typist, of course, on payment. Also I was able to locate another valuable publication listing Hindi periodicals. It was the work of my former colleague, Shri Akhil Vinay. I got the book xeroxed at the National Library. The work copied at Osmania and the lists copied in Calcutta provide an extensive coverage of Hindi periodicals published in India.

One of our greatest needs is to ascertain the date of origin of a periodical. The Bharatiya Kala Bhavan (Indian Art Centre) of the Banaras Hindu University has a unique collection of the first issues of a great many periodicals published in India. The collection has not yet been catalogued. It contains primarily publications in Hindi, but there are other languages too, including English. The Director of the Centre promised full cooperation and agreed to get his collection catalogued following our standards if some funds were made available.
I also visited the Nagari Pracarini Sabha, the oldest and probably the most potent organization for the propagation of Hindi. This institution has rendered more service to the cause of India's national language than any other single institution in India. It has a very fine library of Hindi publications, probably the largest one in India. One can find complete runs of many Hindi periodicals in this Library. Here again the Director assured me that he would be happy to lend his support for any project of mutual interest. It is possible, for example, to get the entire set of the Nāgaripracārini patrika microfilmed in cooperation with this Library.

The Capital of India

The last place I visited was Delhi, the capital of India. And undoubtedly it is now one of the greatest capitals of the world of learning as well. How earnestly I wish I had more time! Delhi can offer plenty of opportunities for the development and enrichment of TULIP. However, my time was limited. I worked in the Delhi University Library for several days and got further strengthening of my belief that I must return to Indias as soon as circumstances permit. And when I return, I should have my own conveyance, a fully equipped microfilm camera, plenty of microfilms, a good typewriter, and an efficient stenographer. I should be prepared to work continuously for a minimum of three years. This will be the best way—the only way—to complete the work of collecting the data which I have just begun.

Indo-American Library Cooperation

It is hoped that TULIP can be kept up to date and current if some funds are made available to the National Library informally and continuously. Here is a field for close cooperation between India and America in the field of bibliographical control.
Retrospective Work

As far as the work on retrospective basis is concerned, the LC Office in New Delhi can do nothing. However, this too could be done and quite successfully too through cooperation with Indian librarians if we want to enrich our American libraries with the past embodiments of knowledge of India and try to fill in the gaps in our library holdings. We must cooperate. The Accessions list began only in 1962. Any prior publication cannot be covered by it. For the earlier publications, for their acquisition, or even their knowledge, we have to make special efforts as shown in the series of my reports. The case of the "Arya" discussed earlier provides enough justification for continuing the work I have brought to this advanced stage.

An Interim Sub-Project

By now we have finished only the first phase. The final objective is yet to be achieved; and in order to do it we have to complete the second phase. For the purpose of securing a substantial grant from a philanthropic corporate body like NEH or CLR we will have to create a favorable atmosphere. And in order to do this we have to invite the opinions of our peers and superiors in the profession. Unless and until we generate strong support it may be difficult to get an external grant.

If we want to secure professional support for the project, it is essential that the work done so far is made available, for examination, to those critics whose support we are seeking. They cannot evaluate the work and pass their judgment without examining what has already been accomplished.

The typing of the three volumes in Mysore was done in a great rush. It was merely a means to secure the safety of the thought-content. It will be necessary to revise and edit the Master-list and then get it copied by
an expert typist so that it can be reproduced in multiple copies.

It will take at least two years before the project is completed and the final form of the TULIP is made available to the libraries in this country. In the meantime, librarians in India, especially those who have seen the work in progress, are quite anxious that the work done so far is published and made available to them. Even in this country, the present work will have sufficient reference value. This need can be met only if we have multiple copies. We have to secure substantial "seed money" to execute this interim phase of the project.
