Standing on her front porch in the shade, Tamela Unruh said her aunt and uncle used to have an orchard, picking plums to make jelly. Tamela Unruh said she found picking fruit brings back memories. "It's the earliest we've been here. Nature has been wonderful," she said. "It was super hot and dry around July 4. '. Th' quality will be affected more than anything else. 'd be surprised to see a significant cold spell to slow things down," she said. Coming up next... 

The earlier harvest will continue this year as long as Kansas stays "within normal seasonal temperatures," McMahon said. If there's a stretch of hot temperatures this summer, the quality will be affected more than anything else. Generally, a stretch of below-normal temperatures would slow everything down, and farmers would see a "more normal growing window," she said. "I'd be surprised to see a significant cold spell to slow things down," she said.
