Richardson's *Clarissa* is notable for the shocking rape of its title character, but what is often critically overlooked about the plot is the presence of female accomplices during the crime. Clarissa's recollection of the event is confused, but she notes with horror the participation of women during her rape. In my thesis, I examine the significance of Richardson's use of women in this role through historical and literary analysis. My thesis utilizes court records from the Old Bailey Proceedings Online to explore the existence of historical rape cases involving female accomplices to shed light on Richardson's use of the women in the novel. I also discuss the roles erotic literature and prostitution play in creating these characters. My research shows that there is significant historical record to establish female accomplice rape as a common crime in eighteenth-century London. While a significant amount of time is spent discussing historical evidence, the project remains largely about Richardson's choices regarding his novel's plots and characters. I contend that the novel is ultimately about gender in relationship to power. Throughout the thesis, I examine authorship and the law's roles in creating each character's understanding of gender and how these perceptions affect the rape of Clarissa.
