IS YOUR DATA 5 ★ ?

= Resource Description Framework

Standard model for publishing and linking data on the web

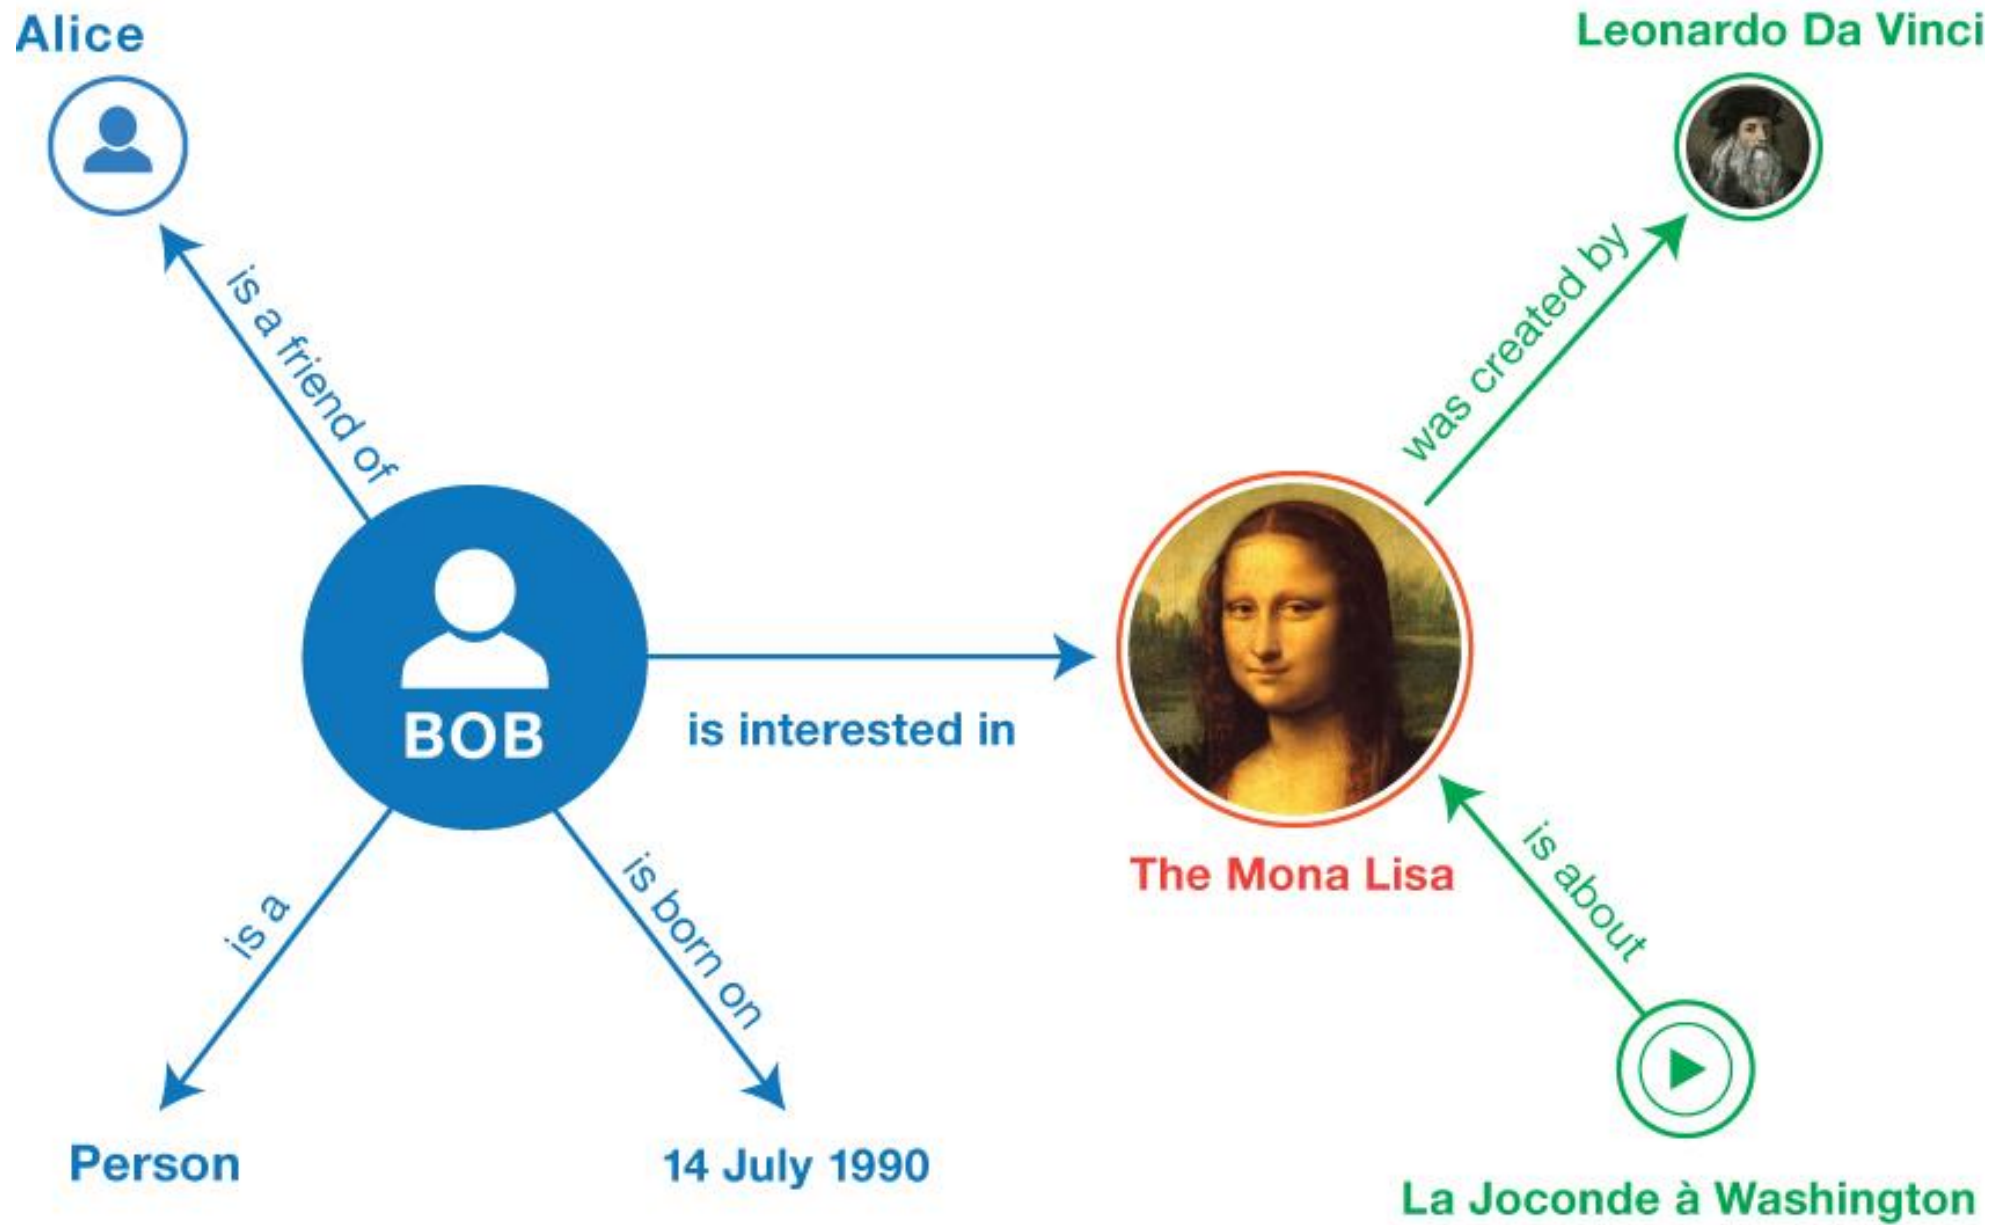

Designed for:

RDF Triples

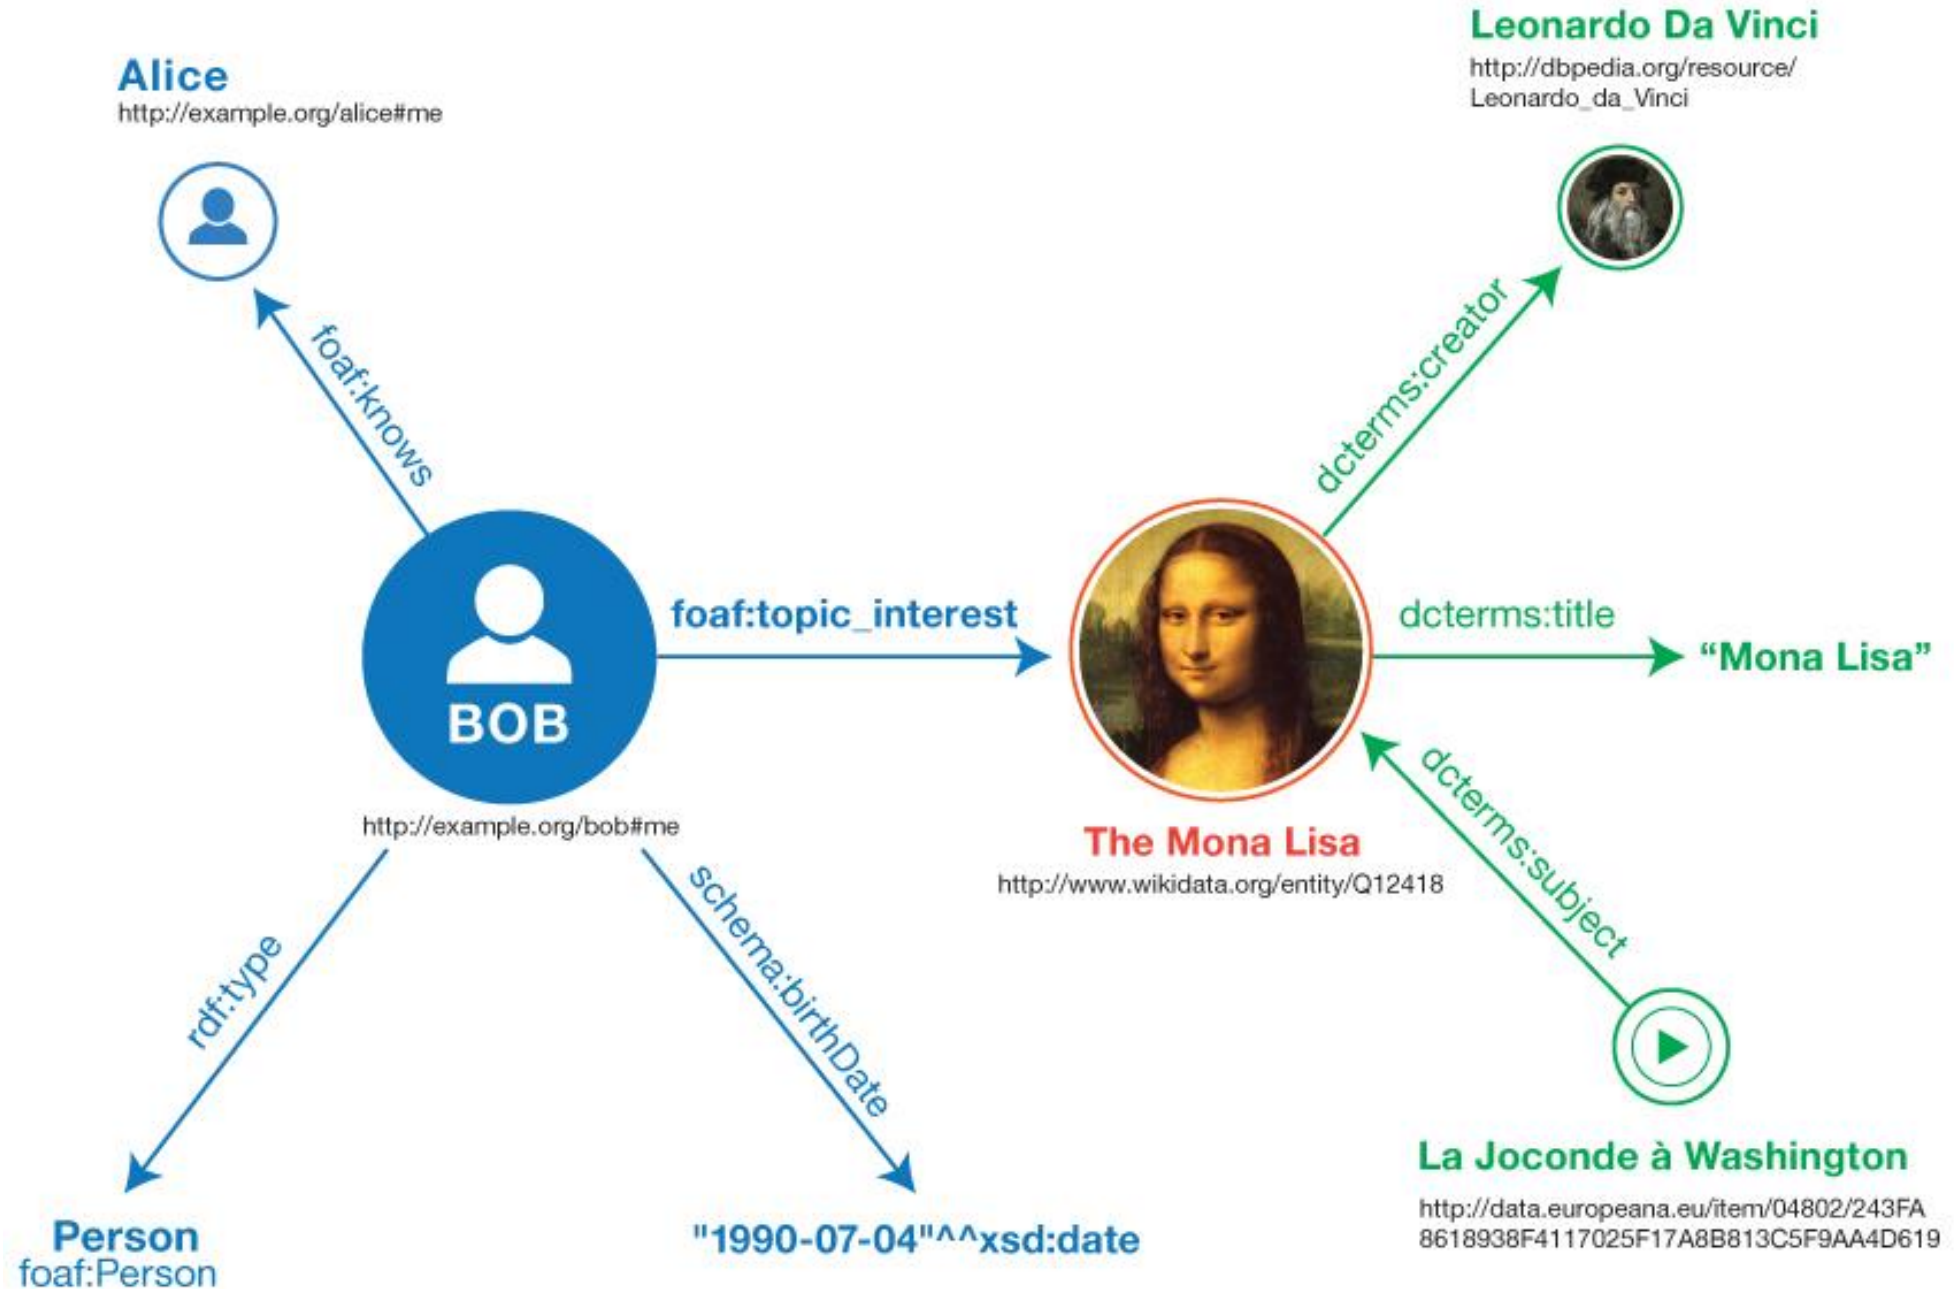

Principles of Linked Data

1. Use URIs to name (identify) things.
2. Use HTTP URIs so that these things can be referred to and looked up (“dereferenced”) by people and systems.
3. Provide useful information when a URI is dereferenced, using open standards such as RDF.
4. Include links to other related things, using their URIs, when publishing data to the Web.

environment?

Bibliographic Framework Initiative

- Initiated by the Library of Congress
- Development of a bibliographic framework, called BIBFRAME
 - provide a foundation for the future of bibliographic description, both on the web, and in the broader networked world.
 - replacement for MARC
 - serve as a general model for expressing and connecting bibliographic data
 - A major focus of the initiative will be to determine a transition path for the MARC 21 formats while preserving a robust data exchange that has supported resource sharing and cataloging cost savings in recent decades.

Bibliographic Framework Initiative

Initiated by the Library of Congress, BIBFRAME provides a foundation for the future of bibliographic description, both on the web, and in the broader networked world. This site presents general information about the project, including presentations, FAQs, and links to working documents. In addition to being a replacement for MARC, BIBFRAME serves as a general model for expressing and connecting bibliographic data. A major focus of the initiative will be to determine a transition path for the MARC 21 formats while preserving a robust data exchange that has supported resource sharing and cataloging cost savings in recent decades.

BIBFRAME Update Forum at ALA
February 1, 10:30-11:30am
McCormick Place West, W196a

BIBFRAME at ALA

New White Paper Available
Common Ground: Exploring
Compatibilities Between the Linked
Data Models of the Library of Congress

- **Zepheira is a privately held company** driven by a team of knowledge management and specific domain area experts ...
- Zepheira's expert team has led the **development and deployment of the Semantic Web** ...
- ... has provided much of the vision and technical foundation for the next generation of the Web.
- ... deeply experienced in successfully implementing these technologies ...

<https://zepheira.com/about/>

Result of Zepheira's Work

- “Bibliographic Framework as a Web of Data: Linked Data Model and Supporting Services”
November 21, 2012
- 42 pages
- **New, proposed model called BIBFRAME**
- 18 pages about the model, including illustrations and examples
- 5 pages about linked data
- 9 pages about related library initiatives
- Conclusion
- Glossary

#1. BIBFRAME is not a ready-to-go, off-the-shelf standard that you can pick up and start using

Library of Congress FAQ

- **“When should we move to BIBFRAME?”**
- BIBFRAME is far from an environment that you could move to yet. The model and its components are still in discussion and development -- a work in progress. When it is more mature, vendors and suppliers will need time to adjust services to accommodate it. And then we can expect a mixed environment for some time.”

<http://www.loc.gov/bibframe/faqs/#q08>

“So, Can I Ignore it for now?”
No. Stay alert!

Although the **BIBFRAME** model is a draft and expected to change, the Library of Congress wants to share it now with the **community** not only so that it is **informed of progress** being made but also to engender conversation and constructive feedback. The Library is leading this initiative, but it is important that the **library community as a whole work in concert** to create an environment for bibliographic description and data exchange that recognizes and **leverages the resources and scale of a global network of data.**

Tools

BIBFRAME Editor (BFE)

For input of data directly into BIBFRAME, try out the demo or download and experiment.

1. [BIBFRAME Editor - Demonstration](#)
This site is for demonstration purposes. It enables recording of a description using the BIBFRAME vocabulary but at this time does not store the input.
2. [BIBFRAME Editor - Download](#)
This link is to the freely downloadable software for the Editor via Github. Please read the documentation for the Editor before attempting to experiment with the software.

MARC to BIBFRAME transformation tools

There are two tools designed to help you evaluate MARC Bibliographic data in the BIFRAME model. The transformation software that powers these tools is also [available for download](#).

1. [Comparison service](#)
Enter the bibliographic identifier (MARC BIB field 001) of a Library of Congress MARC record to view a before and after presentation of a MARC record from the Library of Congress's database as BIBFRAME resources.
2. [Transformation service](#)
Submit your own MARC Bibliographic records (as MARC/XML) and view them as BIBFRAME resources in Exhibit. The resulting data are also available for download.

NOTICE: Most of the class and property names in the data should match the names of classes and properties in the vocabulary. There may be some misalignment because of a short lag between the time the vocabulary is modified and the transformation code updated.

BIBFLOW

AN IMLS PROJECT OF THE UC DAVIS LIBRARY & ZEPHEIRA

[HOME](#) [ABOUT](#) [RESEARCH QUESTIONS](#) [FINDINGS](#) [REPORTS](#) [TEAM](#) [CONTACT](#) [WORKFLOW ANALYSIS](#)

- A two year IMLS grant project of the University of California Davis Library & Zepheira
- Goal: Switch entire database to graph-based/triple-store
- Underlying model: BIBFRAME
- Software: Kuali Ole (with coding modifications)
- Seeking feedback and comments to make model as universal as possible
 - Use cases

Copy Cataloging for Non-Rare Books Using OCLC Connexion Client

posted on October 25, 2014 by Carl G Stahmer | 2 Comments

The following workflow represents the current work process in place at the UC Davis library when copy cataloging a non-rare book using OCLC connection client. It is one of the work functions that will be converted to a native Linked Data workflow as part of the project.

Actors

1. Cataloging Specialist – Medium level of experience.
2. Copy Cataloger – Lowest level of experience.
3. Supporting systems and tools (e.g. harvesting daemon).

Description

User Story: "As a library cataloger I need to find and claim a record in OCLC for a published book to include in my integrated library system with additional metadata for its location in library collection."

Success Metric(s)

1. The new set of bibliographic metadata elements will be present and discoverable by library users of the OCLC Melvyl System.

"I believe everyone benefits from the visibility of libraries and their content on the Web."

- **The Libhub Initiative Pledge**

- One of founding sponsors: Zepheira
- Other vendor sponsors: Atlas, Innovative, SirsiDynix
- Goal: “publish BIBFRAME resources to the Web” and enhance discoverability

Linked Data for Libraries (LD4L)

- Collaboration of Cornell, Harvard and Stanford
- Funded by nearly \$1 million two-year grant (Andrew W. Mellon Foundation) in February 2014
- Goal of project: Create a triple store called the Scholarly Resource Semantic Information Store (SRSIS) model
 - Intent to use existing ontologies
 - Also to use open source software
 - One deliverable: to build a Blacklight interface to facilitate searching of triples

UNLV's LINKED DATA PROJECT

- Inspiring because presenters have emphasized that their “Project led, implemented & managed by 2 busy faculty librarians”
- Library first formed a study group on linked data
- Then after a year, worked on prototype
 - Enabled them to verify the ability to generate LOD without investment in new systems
 - Instrumental in acquiring administrative support for project

Design Phase

- Selecting Technologies
- Data model
- Mapping
- Determining rules to create URI's

Implementation

Initial Data prep in ContentDM repository

<< < 1 2 3 4 5 6 7 8 9 10 11 > >> | 539 objects

≡ Grid | ≡ List | ≡ Tile

1. Costume design drawing, yellow calypso costume, circa 1945-1955

2. Costume design drawing, samba costume pencil sketch, circa 1945-55

3. Costume design drawing, samba costume sketch, circa 1945-55

4. Costume design drawing, pink American Indian headdress, circa 1945-55

5. Costume design drawing, pink American Indian headdress and shield, circa 1945-55

☆	1.	An installation and migration methodology for operating systems						Computer Sciences	Computer Science
☆	2.	An experimental numerical analysis of						Engineering Mechanics	Mechanical and Aerospace Engineering

Using facets and filters

Use facets and filters to select subsets of your data to act on. Choose facet and filter methods from the menus at the top of each data column.

Not sure how to get started?

Import linked data into triple stores

- Runs parallel to their ContentDM repository
- Finished result: Video of content in Pivot Viewer:
 - <https://youtu.be/-83FTKEkYZ0>

How Feasible is it to Implement Linked Data?

- Independent project requires
 - Technical knowledge or willingness to learn (RDF, linked data principles)
 - Group project
 - Administrative support/buy-in
 - IT/Technical Support (triple store)

When Can We Expect to See Linked Data in Our Libraries?

- Pioneers/early adopters are paving the way
- Not financially feasible to leap until details have been worked out
- Momentum may propel linked data era forwards

References

Will be posted on the *MOBIUS* Conference Website

Questions

- Humorous Disclaimers:
 - We're 3 busy faculty librarians
 - We're librarians, not "linked data specialists," Jim
 - Our crystal balls work imperfectly

Zepheira Training

Linked Data and BIBFRAME Practical Practitioner Training

Curriculum

- Suggested Schedule
 - 5-6 Calendar Weeks
- 5 modules (Self-Paced On-demand Videos)
 1. History of the Web and Linked Data
 2. BIBFRAME Foundations
 3. BIBFRAME - Data Modeling Essentials
 4. Interacting with BIBFRAME Materials and Profiles via Zepheira's Training Tool Suite
 5. Readiness Assessment, Change Management and Governance
- Exercises, Discussions
- Regular Office Hours with Colleagues and Instructors
