

# The New Missouri Mix

Barbara J. Willenberg and Karla Vollmar Hughes  
Department of Food Science and Nutrition

Why a new Missouri Mix? For a healthier you! This all-purpose baking mix is lower in salt than the previous version. Also, whole wheat flour can be used in place of all-purpose flour to increase the fiber and nutrient content of the mix. The new Missouri Mix offers more versatility in the tested recipes provided.

The new Missouri Mix is as easy to use as a commercial all-purpose baking mix. In addition, it generally costs less to prepare mixes at home than to buy the commercial product. The main reason for the cost saving is that you supply the labor. Keep in mind that

## Quality in the Making

sales on commercial mixes or the regular price of store brands or no-frills mixes may be less than the cost of

ingredients to make the mix at home. Use the chart in Table 1 to compare the cost of your homemade mix to a commercial all-purpose baking mix.

## Large batch of Missouri Mix

(Requires a very large mixing bowl or tub for mixing)

- 5-pound bag of flour or 20 cups<sup>1</sup>
- $\frac{3}{4}$  cup baking powder
- 2 tablespoons salt
- 2½ cups nonfat dry milk powder
- 3¾ cups shortening

Makes 27 cups mix.

<sup>1</sup>All-purpose, whole wheat or any combination of both.

## Smaller batch of Missouri Mix:

- 8 cups flour (all-purpose, whole wheat or any combination)
  - $\frac{1}{4}$  cup plus 1 tablespoon baking powder
  - 2 teaspoons salt
  - 1 cup nonfat dry milk powder
  - 1½ cups shortening
- Makes 11 cups mix.

Combine dry ingredients in large bowl. Sift to assure even distribution of ingredients. Using a pastry blender, cut in shortening until mix is the consistency of cornmeal.

Table 1. Calculating the cost of Missouri Mix.

### Large batch:

- a) Cost of one 5-pound bag of flour = \$ \_\_\_\_\_
- b) Cost of 24-ounce can baking powder x 0.174 = \$ \_\_\_\_\_
- c) Cost of 26-ounce box salt x 0.051 = \$ \_\_\_\_\_
- d) Cost of 64-ounce box dry milk powder x 0.094 = \$ \_\_\_\_\_
- e) Cost of 3-pound can shortening x 0.543 = \$ \_\_\_\_\_

**Total cost** = \$ \_\_\_\_\_

Cost of one cup mix (total cost ÷ 27 cups) = \$ \_\_\_\_\_

Compare to the cost of 1 cup of commercial all-purpose baking mix.

### Example:

One 20-ounce box of commercial all-purpose baking mix costs \$1.50. Since 2 ounces of commercial baking mix is equivalent to  $\frac{1}{2}$  cup, 20 ounces equals 5 cups. Therefore:  $\$1.50 \div 5 = \$0.30$  per cup. (Compare to the cost of 1 cup of Missouri Mix.)

## Preparing and storing Missouri Mix

- Accurate measuring can mean the difference between a prize-winning product and a failure.
- Measure dry ingredients in standard dry measuring cups or standard measuring spoons. Spoon ingredients lightly into the cup and level with a spatula. Be careful not to hit the side of the measuring cup with the spoon causing dry ingredients to settle and measurements to be inaccurate.
- All ingredients to be measured should be lump-free. Sifting will remove lumps from baking powder.
- Solid ingredients, such as shortening, should be packed firmly into a flush-rim measuring cup so that no air pockets remain. A rubber spatula is useful to get all the shortening out of the cup.
- When the baking powder is added, stir mix at least one minute to thoroughly distribute.
- Always stir Missouri Mix before measuring to redistribute the ingredients. Spoon lightly into a cup and level with a spatula. Do not sift Missouri Mix before using.
- If stored in an airtight container in a cool, dry location, Missouri Mix will stay fresh for several months.
- Suitable storage containers for Missouri Mix include: glass jars, plastic containers and bags made for freezer use.
- The shelf-life of Missouri Mix can be extended by packaging in moisture- and vapor-proof containers and refrigerating or freezing.
- If whole wheat flour is used, Missouri Mix must be refrigerated to prevent flavor changes due to the higher level of fat in whole wheat flour.
- Before storing, label Missouri Mix with name of product, date pre-

pared, use-by date and other information you will need to use the Mix.

In addition to the recipes that follow, Missouri Mix can be used to make your own favorite recipes. Use 1½ cups of Missouri Mix for each cup of flour in your recipe. Leave out leavening, salt, milk and fat in the recipe because they are already included in the Mix.

### Basic Biscuits

For 6 biscuits:

1 cup Missouri Mix
