Potash is automatically determined with this instrument at a rate of forty analyses per hour. The sample solutions are placed in the turntable at the right, pumped into a flame photometer, and finally the results are recorded on a strip chart recorder. Phosphorus is similarly determined and an automated nitrogen method is being developed. These automated methods have been developed by the Missouri Experiment Station Chemical Laboratories so that the large number of samples necessitated by the increased fertilizer usage can be analyzed efficiently.

Missouri Commercial Fertilizer Inspection and Analysis

July 1, 1965 to June 30, 1966

This bulletin is a summary of work performed and data accumulated in the administration of the Missouri Fertilizer Law during the year ending June 30, 1966. The number and kinds of fertilizers sampled and the manner in which they met or failed to meet guarantee are listed for each guarantor in Table 4.

INSPECTION

The primary purpose of the fertilizer law is to assure that fertilizers offered for sale in the state will be labeled and guaranteed in a standard prescribed manner and that these guarantees will be met. In pursuance of this objective inspection visits are made and samples are collected at points where fertilizer is offered for sale in every county in the State.

Reduction of the frequency of deficiencies in mixed fertilizer from nearly 16% in 1963-64 to 9.26% during 1965-66 reflects a very real and significant improvement in the quality of fertilizer which the industry is providing for sale in the state. This is a highly praiseworthy achievement.

A total of 5906 official samples were collected and analyzed during the 1965-66 fiscal year. This includes 3243 samples of bagged fertilizers and 2663 samples of bulk and liquid fertilizers, and rock phosphate.

On the basis of tonnage of all fertilizers, one sample was secured for each 210 tons sold. Single nutrient materials are generally found deficient much less frequently than mixed fertilizers and, consequently, are sampled less intensively. Thus, only one sample was secured for each 907 tons of straight materials shipped, while mixed fertilizers were checked at a rate of one sample for each 146 tons sold.

In the interest of protecting the consumer, inspection efforts are directed toward detecting and focusing attention on those brands and grades found deficient most frequently so that corrections will be effected as rapidly as possible. For this reason the percent of deficiencies noted in samples collected does not purport to reflect, with complete accuracy, the over-all performance of the industry or of any particular company.

Under the provisions of the fertilizer law each distributor is required to file copies of invoices covering every lot of fertilizer sold for use in the State. From these invoices information is compiled as to the amounts, kinds, and county destination of fertilizer consumed. These data are listed in Tables 1, 2, and 3, and in accompanying charts.

Other information contained in this bulletin includes a statement of all fertilizer fees and penalties received and expenditures made therefrom, a list of distributors issued permits to sell fertilizers in the state, and the full text of Missouri Fertilizer Laws and Regulations.

PENALTIES

The fertilizer law provides that penalties shall be assessed on any lot of fertilizer as much as 10% below guarantee in any one of the major plant nutrients or 3% deficient in total value. During the year covered by this bulletin, 512 of the 5906 lots of fertilizer sampled were found deficient enough to be subject to penalty. Total penalties assessed during the year amounted to \$19,777.35.

CHEMICAL ANALYSIS

All of the official fertilizer samples collected by the fertilizer inspectors were analyzed in the Experiment Station Chemical Laboratories located at the University of Missouri, Columbia. Each fertilizer sample was reduced and divided by a sample riffle to two like portions of approximately one pound each. One half of the reduced sample was ground and prepared for the laboratories and analyzed for nitrogen, phosphorus, and potassium. The other half was placed in reserve for future reference. For samples which were found significantly low in any one plant food element or over-all value by the "first run" analysis, an additional, independent determination was made to confirm the "first run" result. For samples which were classed as "misbranded" in any one plant food element or over-all value on the basis of "first run" analyses, the reserve portion of the sample was divided, ground, and analyzed. Before any sample was labeled "misbranded" the results obtained on both the first and reserve portions agreed within laboratory analytical tolerance.

The analytical procedures used for all determinations were Official Methods of the Association of Official Agricultural Chemists or equivalent. These methods are as follows:

- (1) Nitrogen
 - a) Solid fertilizers-Improved Kjeldahl method (2.045), reduced iron method (2.047) and chromium powder method (2.049).
 - b) Liquid samples-Reduced iron method (2.047) and Chromium powder method (2.049).
- (2) Phosphorus-Photometric method for direct determination of available phosphorus (2.036), photometric method (2.018), and Quimociac method (2.039).
- (3) Potassium-Flame photometric method (2.077) and sodium tetraphenylboron method (2.083).

SUMMARY OF TONNAGE DATA

During the year ending June 30, 1966, registered distributors reported a total of 1,242,702 tons of fertilizer shipped for use in Missouri. This represents an increase of 14% over 1964-65. The following chart shows how this increase was distributed among the various kinds of fertilizers and fertilizer constituents.

	1964-65	1965-66	% Change
Mixed Fertilizers	650,435	791,924	+ 21.8
Fertilizer Materials	286,993	270,049	- 5.9
Rock Phosphate	151,265	180,729	+ 19.5
Nitrogen	194,342	208,003	+ 7.0
Available P ₂ O ₅	112,792	132,085	+ 17.1
Potash	108,887	134,910	+ 23.9
Liquid Mixed Fertilizers	49,163	68,062	+ 38.4
Bulk Dry Blends	200,893	284,468	+ 41.6

The average composition of all mixed fertilizers sold during the first six months of 1966 was approximately 11.3% N, 16.5% available P_2O_5 , and 15.7% K_2O . For more detailed tonnage data see tables and charts on the following pages.

BULK FERTILIZER SAMPLING STUDY

In addition to the routine work of administering the Missouri Fertilizer Law, during 1965 and 1966 Experiment Station personnel directed and participated in a four-state collaborative study in the sampling of bulk fertilizers. This study led to the adoption, by the Association of Official Analytical Chemists, of new official methods for sampling bulk fertilizers.

In a separate related study, some of the mechanisms leading to sampling bias were investigated and a new and basically different bulk fertilizer sampling tube was developed. This sampler (see picture) avoids the known mechanisms of sampler bias, related to filling action, by encompassing a core in place rather than requiring the fertilizer to flow into the tube.

LABELING STATEMENT REQUIRED ON FERTILIZERS SOLD IN BULK

The Missouri Fertilizer Law provides that all fertilizers offered for sale in the state, including lots stored or delivered in bulk, shall have attached or be accompanied by a label stating the guaranteed analysis and the name and adress of the person guaranteeing the fertilizer.

When bulk fertilizer has passed into the bin or tank of a dealer it no longer is under the control of the original manufacturer and the brand and guaranteed analysis becomes the sole responsibility of the dealer.

Examples of proper bin or tank labeling follow:

Bulk Rock Phosphate Guarantee:

31% Total P₂O₅
3% Available P₂O₅
70% / 200 mesh sieve
John Doe Phosphate Co.
Centerburg, Missouri

Bulk 10-10-10
Guarantee:

10% Nitrogen 10% Available P₂O₅ 10% Potash John Doe Fertilizer Co. Centerburg, Missouri

Such a label must be displayed in a conspicuous place on the outside of bin or tank by the bulk fertilizer dealer.

Fertilizers in transit from supplier to dealer, or from dealer to consumer, must be accompanied by a label giving the statements shown above. An invoice or sales ticket printed with the required information will suffice.

For bulk blended fertilizer billed on the basis of materials used, the guaranteed analysis must be stated and the plant food claimed therein must agree with the amount of plant food for which the purchaser is billed. 4

Missouri Fertilizer Tonnage by Counties 1965-1966*

This table is a summary presentation of all official fertilizer samples collected and analyzed by the Missouri Agricultural Experiment Station in carrying out the provisions of the Missouri Fertilizer Law during the year ending June 30, 1966. The detailed analyses are not presented here, but they have been published in quarterly reports which are available on request.

The deficiencies indicated are based on tolerances established for assessment of penalties by Section 266.343 of the fertilizer law.

The reader may determine by this table the relative manner in which the fertilizers of the various manufacturers met guarantee. Totals at the end of this table show how these fertilizers compared by the categories in which they were separated.

FERTILIZER TONNAGE FEES AND PENALTIES

The Missouri Fertilizer Law provides that a fee of 1½¢ for each 100 pounds of fertilizer sold for use in the state shall be paid by the registered distributor to the Director of the Missouri Agricultural Experiment Station. These fees are specified to be used "for defraying expenses in administering section 266.290 to 266.350 and for practical and scientific experiments by the Missouri Agricultural Experiment Station in the value and proper use of fertilizers, and for publishing the results of the same, and for other works, projects, research, investigations and publications as may be of practical value to the farmers of this state."

In addition to the tonnage fees, penalties assessed under the provisions of section 266.343 are specified to be paid to the Director when a purchaser cannot be ascertained.

In accordance with part (8) of section 266.340, the following is a statement of all fees and penalties received under the Missouri Fertilizer Law, and of expenditures from these funds during period covered by this bulletin.

MISSOURI FERTILIZER LAWS

AND REGULATIONS

Revised to August 29, 1959

Chapter 266 RSMo

FERTILIZERS

266.290 Definitions

266.300 Permit required to sell fertilizer-application

266.310 Sale of misbranded fertilizer prohibited—misbranding defined

266.320 Information required on containers

266.330 Sales to be reported—fees—to be used for what

266.340 Powers of director in administering law

266.343 Penalties for deficiency in fertilizer

266.347 Penalties payable to purchaser or director, collection procedure

266.350 Violation a misdemeanor

266.290. Definitions

The following words, terms, and phrases, when used in sections 266.290 to 266.350 have the meanings ascribed to them in this section, except where the context clearly indicates a different meaning:

- (1) "Persons" includes individuals, partnerships, associations, firms, corporations, estates, trusts, receivers, or trustees appointed by any state or federal court.
- (2) "Distributor" means any person who imports, consigns, manufactures, produces or compounds fertilizer, or offers for sale, sells, barters, or otherwise supplies fertilizers for consumption or use in this state; provided that this term shall not apply to any person who purchases fertilizer from a distributor registered under sections 266.290 to 266.350 and which fertilizer has been once sold in compliance with sections 266.290 to 266.350.
- (3) "Fertilizer" means any substance containing nitrogen, phosphorus, potassium, or any other element or compound recognized as essential or used for promoting plant growth, or altering plant composition, which is sold or used primarily for its plant nutrient content, the consumer's purchase price of which exceeds ten dollars per ton, and which is to be sold or offered for sale for consumption or use in this state.
- (4) "Director" means the director of the Missouri Agricultural Experiment Station at Columbia, Missouri.
- (5) "Sale," "Sold," and "Sells" include exchanges and consigments for sale and means any transfer or barter. Laws 1953, p 9, § 1 (266.290).

266.300. Permit required to sell fertilizer-application

It shall be unlawful for any distributor to sell, offer for sale or expose for sale for consumption or use in this state any fertilizer without first securing a permit from the director. Such permit shall expire on the thirtieth day of June of each year. Application for such permit shall be on forms furnished by the director. Laws 1953 p. 9, § 1 (266.300).

266.310. Sale of misbranded fertilizer prohibited misbranding defined

It shall be unlawful for any person to sell, offer for sale or expose for sale any fertilizer for use or consumption in this state which is misbranded. Any fertilizer shall be deemed to be misbranded if it fails to carry the printed statement required under section 266.320, or if the chemical composition of such fertilizer does not meet the guarantees expressed on said statement within allowable tolerances fixed by the director, or if the container for such fertilizer or any statement accompanying the same carries any false or misleading statement, or if false or misleading statements concerning it agricultural value are made on any advertising matter accompanying or associated with such fertilizer. Laws 1953, p. 9, § 1 (266.330).

266.320. Information required on containers

- 1. Each container of fertilizer sold, offered for sale or exposed for sale for consumption or use within this state shall bear thereon or have attached thereto in a conspicuous place a plainly written statement in the English language giving the following information:
- (1) The name, brand or trade mark under which the fertilizer is sold;
- (2) The name and address of the person guaranteeing the fertilizer;
- (3) The guaranteed chemical composition of the fertilizer, expressed in the following terms:
 - (a) Per cent of total nitrogen,
 - (b) Per cent of available phosphoric acid,
 - (c) Per cent of soluble potash.

Unacidulated mineral phosphatic materials and basic slag shall be guaranteed as to both total and available phosphoric acid, and the degree of fineness as expressed in percentage passing through standard mesh sieves. In the case of bone, tankage, and other natural organic phosphate materials, only total phosphoric acid must be guaranteed.

2. If any fertilizer is sold, offered for sale, or exposed for sale in bulk, such plainly printed statement herein required shall accompany each lot and parcel of such fertilizer. Laws 1953, p. 9, § 1 (266.310).

266.330. Sales to be reported-fees-to be used for what

Every distributor shall, within thirty days after each sixmonths' period ending June thirtieth and December thirtyfirst, file with the director on forms supplied by him, a sworn certificate setting forth the amount of fertilizer sold by such distributor for consumption or use in the state of Missouri during each such respective period. At the time of filing said certificate, each distributor shall pay to the director a fee of one and one-half cents for each one hundred pounds of fertilizer sold by him during the period covered by such certificate; provided, however, that sales to fertilizer manufacturers or exchanges between them are hereby exempted. The fees so paid to the director shall be used for defraying the expenses in administering sections 266.290 to 266.350 and for practical and scientific experiments by the Missouri Agricultural Experiment Station in the value and proper use of fertilizers, and for publishing the results of the same, and for other work, projects, research, investigations and publications as may be of practical use to the farmers of this state.

266.340. Powers of director in administering law

The duty of enforcing and administering sections 266.290 to 266.350 shall be vested in the director. The director or his authorized agents and deputies are hereby authorized and empowered:

- (1) To collect samples, inspect, and make analysis of fertilizer sold, offered or exposed for sale within this state; provided, however, that samples taken of fertilizer sold in bulk shall be taken from the bulk container immediately after mixing on the premises of the mixing facility or when not posible to be sampled from the bulk container wherever found;
- (2) To adopt, after public hearing, such reasonable rules and regulations necessary to secure the efficient enforcement of sections 266.290 to 266.350;
- (3) To inspect and audit the books of every distributor who sells, offers for sale, or exposes for sale fertilizer for consumption or use in this state, to determine whether or not the provisions of sections 266.290 to 266.350 are being fully complied with;
- (4) To require every distributor to file with the director a copy of each invoice covering every sale of fertilizer for use or consumption within this state, which invoice shall show the name and address of the purchaser thereof, the analysis of such fertilizer expressed in terms of guaranteed chemical composition and the weight thereof. Said invoices shall not be

required more often than two-week intervals, and all such invoices shall be returned to the distributor upon his request;

- (5) To enter upon any public or private premises during the regular business hours in order to have access to fertilizer subject to sections 266.290 to 266.350 and the rules and regulations thereunder, and to take samples and inspect such fertilizer;
- (6) To issue and enforce a written or printed "Stop sale, use, or removal" order to the owner or custodian of any fertilizer which is found to be in violation of any of the provisions of sections 266.290 to 266.350, which order shall prohibit the further sale of such fertilizer until sections 266.290 to 266.350 have been complied with or said violation has been otherwise legally disposed of by written authority of the director;
- (7) To maintain a laboratory with necessary equipment, and to employ such employees as may be necessary to aid in the administration of sections 266.290 to 266.350;
- (8) To publish each year the full and detailed report giving the names and addresses of all distributors registered under sections 266.290 to 266.350, the analytical results of all samples collected, and a statement of all fees and penalties received and expenditures made under sections 266.290 to 266.350;
- (9) To revoke or suspend the permit, or refuse to issue a permit to any distributor who has willfully violated any of the provisions of sections 266.290 to 266.350 or failed or neglected to pay the fees or penalties provided for in sections 266.290 to 266.350;
- (10) To institute and prosecute through the attorney general of this state suits to collect any fees due under the provisions of sections 266.290 to 266.350 which are not promptly paid;
- (11) To establish from information secured from manufacturers and other reliable sources the market value of fertilizer and fertilizer materials for the purpose of determining the amount of damages due when the official analysis shows an excessive deficiency from the guaranteed analysis.

266.343. Penalties for deficiency in fertilizer

If any fertilizer offered for sale in this state shall upon official analysis prove deficient from its guarantee as stated on the bag or other container, penalities shall be assessed as follows:

- (1) For a single ingredient fertilizer containing nitrogen or phosphate or potash:
- (a) When the value of this ingredient is found to be deficient from the guarantee to the extent of 3% and not over 5%, the distributor shall be liable for the actual deficiency. When the deficiency exceeds 5% of the total value, the penalty shall be three times the actual value of the shortage.
- (2) For multiple ingredient fertilizers containing two or more of the single ingredients: nitrogen or phosphate or potash, penalties shall be assessed according to (a) or (b) as

herein stated. When a multiple ingredient fertilizer is subject to a penalty under both (a) and (b) only the larger penalty shall be assessed.

- (a) When the total combined values of the nitrogen or available phosphoric acid or potash is found to be deficient to the extent of 3% and not over 5%, the distributor shall be liable for the actual deficiency in total value. When the deficiency exceeds 5% of the total value, the penalty shall be three times the actual value of the shortage.
- (b) When either the nitrogen, available phosphoric acid, or potash value is found deficient from the guarantee to the extent of 10% up to the maximum of two units, (2% plant food) the distributors shall be liable for the value of such shortages.

266.347. Penalties payable to purchaser or director, collection procedures

- 1. The penalties assessed by the director under Section 266.343 shall be paid by the distributor to the purchaser of such fertilizer, and in the event such purchaser cannot be ascertained, then said penalty shall be paid to the director and used for the purposes specified in section 266.330, except the maximum paid the purchaser will approximate the actual value of the deficiency.
- 2. The director shall prepare a written certification of penalties assessed under section 266.343 addressed to the distributor. A copy of such certification of assessment shall be mailed to the distributor liable for the penalty.
- 3. Any decision, finding, order or ruling of the director made pursuant to the provisions of section 266.290 through 266.350 shall be subject to judical review in the manner provided by Chapter 536, RSMo.
- 4. If any distributor shall fail to pay any penalty assessed by the director after the time for judicial review has expired, or after any judgment or decree approving such assessment has become final, the person entitled to such penalty under the provisions of subsection 1 shall be entitled to bring a civil action to recover the same, and in such civil action such persons shall be entitled to recover from the distributor the amount of the penalty, a reasonable attorney's fee and costs of the action.

266.350. Violation a misdemeanor

In addition to the civil penalties provided herein, each violation of any provision of sections 266.290 to 266.350 shall be deemed a misdemeanor.

Regulations Under the Provisions of Section 266.340 of the Missouri Fertilizer Law.

I. On the basis of information secured from persons holding permit to sell fertilizers in Missouri the following values will be used for purposes of assessing penalties as provided by Section 266.343 of the Missouri Fertilizer Law.

Nitrogen\$3.00 per unit (15¢ per pound)
Total P₂O₅ in Rock Phosphate72 per unit (3.6¢ per

Available P₂O₅ 2.00 per unit (10¢ per pound) Potash 1.00 per unit (5¢ per pound)

In event the actual retail price is substantially greater than the value as calculated at the above rates, the penalty shall be based on the retail price. In addition the director may require any lot subject to penalty be returned to the distributor and all costs involved in the return of such goods shall be borne by the distributor. However, in the case of bulk fertilizers, the person offering fertilizer for sale in bulk shall be responsible for guaranteeing such fertilizer and shall be liable for all penalties assessed under the provisions of Section 266.343.

II. Any lot of fertilizer that is subject to penalty shall be deemed misbranded. Any lot of fertilizer that is found misbranded for any reason will be subject to "stop sale".

III. Penalties shall be assessed on the basis of the fertilizer on hand at the time the sample is taken.

IV. At any time the following conditions prevail the Director will notify the person guaranteeing the fertilizer that the quality of such fertilizers must be improved and notification of further sales in the state must be made to the Director within 24 hours after shipment.

A. When more than 20% of 5 or more samples of all fertilizers sampled from a plant are subject to penalty.

B. When more than 20% of 5 or more samples of one grade from a plant are subject to penalty.

If further sampling and analysis of fertilizer covered by A or B, shipped after the first official notice does not indicate performance above these standards the guarantor's permit may be suspended or sale may be stopped on all such lots.

- V. Any person combining fertilizer materials prior to delivery to the final purchaser, who is not a "Distributor" as defined in Section 266.290, will be required to secure, from the Director, a permit to blend fertilizer materials and certify that he will offer for sale only fertilizers that have previously been sold in full compliance with the Missouri Fertilizer Law.
- VI. The last registered distributor selling fertilizer for use in Missouri shall be responsible to pay to the Director the fee as specified in Section 266.330.

for profitable crop production in MISSOURI?

Prepared by the University of Missouri Agricultural Extension Division

Having the soil tested is the best way to determine the kind and amount of fertilizer needed on each field. County agents can furnish soil testing information.

In the absence of a soil test, the following table may be helpful. It shows typical plant food needs to produce high yields and quality crops in Missouri, as indicated by soil test results over a period of years. However, individual fields may vary greatly in their actual needs.

TYPICAL PLANT FOOD NEEDS IN MISSOURI

	Pou	ınds per A	cre	
CROP	N	P ₂ O ₅	K ₂ O	
CORN	100	80	40	Most of the phosphate and potash should be plowed down. Practically all of the nitrogen either should be plowed down or placed deeply in the soil either before planting or shortly thereafter. Since corn is grown widely over the entire State, needs for applied nutrients vary greatly.
COTTON	80	60	60	Soils extremely low in potassium need more potash than shown here. Although soil tests may show a high mineral phosphorus level, the use of phosphate still is necessary with full use of nitrogen.
WHEAT	60	100	60	Fertilizer applied to wheat in Missouri often must feed a grass and/or legume seeding too. This calls for a liberal application of phosphate and potash. Available soil potassium varies widely across the State, however, so that the potash requirement varies accordingly. Where "build-up" phosphate applications are made separately, the P ₂ O ₅ suggested here may be reduced about one-half.
BARLEY	60	60	60	The phosphate application suggested here is low in comparison with wheat because the barley grown in Missouri is likely to be on land which has had a full soil treatment previously. If not, increase the phosphate.
OATS	60	40 /	40	If corn planted prior to oats received liberal nitrogen, application to oats may be reduced by about 20 lbs. If the corn made a good yield. Following a poor year, nitrogen carryover may be even greater. If grass and legume seedings are made in oats, phosphate and potash should be increased accordingly.
SOYBEANS	15	60	60	Liberal amounts of lime, phosphate and potash are needed. Because of erratic response to direct fertilizer application, it may be better to apply fertilizer heavily to the previous crop with the soybeans benefiting residually.
PASTURE	50	150	50	This suggested treatment is for land previously in hay or pasture. On previously cultivated land, the potash requirement likely will be greater.
ALFALFA	40 /	160	160	Annual applications are needed in addition to this treatment at the time of establishment.

THE CORRECT FERTILIZER TO USE to supply these plant foods may be any one of several analyses available from fertilizer dealers in Missouri, or it may be a combination of two or more fertilizers.

One example for corn might be 400 lbs. of 5-20-10 plus 240 lbs. of ammonium nitrate. For pastures, the total need might be supplied by 625 lbs. of 8-24-8. Nitrogen applications should be made annually according to the crop. Phosphate and potash may be applied annually, or most of it may be put on once or twice during the rotation with only a starter used with each crop.

SEE YOUR FERTILIZER DEALER. He can help you decide on the kinds and amounts of fertilizer which will supply the typical plant food needs shown above.
