THE MISSOURI ALUMNUS
is published monthly except July, August and January by the University of Missouri Alumni Association, at Rollins Hall, Columbia, Missouri and mailed to all active members in the Association. Entered as second class matter under the act of March 3, 1879. Active membership $4.00 a year; life membership $80. Member, American Alumni Council.

About the cover: One of the delightful attractions in Missouri is the purple appearance of redbud and dogwood each spring. To fit in with the arrival of the new season, the Alumnus has chosen this closeup view of redbud—with that in color!—Photo by Tau, University Photographer

MARCH 1961
VOL. XLIX, NO. 6

Campus expansion makes news

Louise Stanley Hall, the new building for the School of Home Economics at the University, will be formally dedicated in special ceremonies in Jesse Auditory 1 at 2:30 p.m. March 24. The dedication address will be given by Dr. James Hilton, president of Iowa State University. A dinner will be held at the Student Union on the preceding night and a recognition luncheon will be held there at noon March 24. The new building is named for Miss Louise Stanley, former chairman of the home economics department.

The University is planning additions to Memorial Stadium to provide 4,100 more permanent seats to its present capacity of approximately 31,716 permanent seats. President Ellis said the committee on intercollegiate athletics hopes the new additions can be completed in time for use when Missouri meets Washington State here next September 23 to open the 1961 football season. It is planned to have one new section on the west side of the stadium, with 3,600 seats and one and a half sections on the east side, with 5,500 seats.

The new five-story Research Addition to the University Medical Center is now being opened for use by the clinical research faculty of the School of Medicine. The addition, an integral part of the Teaching Hospital, provides a seriously needed increase in space for medical research, for training medical students, and for care of patients. The Research Addition provides the clinical departments with some 25 additional laboratories, eight office-laboratories, 15 offices and storage rooms, as well as two conference rooms and other accessory space. It is basically an extension of the north-center wing of the Teaching Hospital which has seven floors above the ground floor. The Research Addition was constructed and equipped at a cost of about $80,000; funds came from grants of nearly $400,000 from the National Institutes of Health, $18,000 from the National Fund for Medical Education, and from a number of unrestricted gifts and grants and other sources, including a balance from the original State Legislature appropriation for construction of the Medical Center.

Architect's drawing of the proposed Student Union Annex at the University, for which preliminary plans and specifications have been approved by the Board of Curators. The two-story structure will be located facing the Mall near Rollins Street, just south of the new Arts and Science Classroom Building now under construction. The Annex will house some physical education and recreational facilities, the University Book Store, administrative offices of the Student Union, and various other facilities for student use.
Two major events mark the outstanding success of the Museum of Art and Archaeology during the past year—the acquisition of a fine Egyptian statue of the VIth Dynasty, the gift of Mr. Leonard Epstein of New York, and the establishment of the museum's first large memorial fund for purchases, the Hasseltine Garnett Chorn and Samuel K. Chorn Memorial Fund, founded by Leland Hazard of Pittsburgh, Class of 1918, and Mary Chorn Hazard, Class of 1921.

While two groups of Egyptian antiquities were given to the museum in 1958 and 1959 by Mr. Epstein, the statue presented last year is the most important single piece in our Egyptian collections, indeed in the whole museum thus far. The figure portrayed is clearly identified by the inscription on one side of the block-like seat as “The Count and Overseer of Priests, Idi.” This associates the Missouri statue, thirty-four inches high, with a smaller limestone figure in the Metropolitan Museum of Art, the inscription on which tells us that Idi was “Count, Sole Companion (of the king), Overseer of a Workshop, and Overseer of Priests.” The date is late in the VIth Dynasty, about 2200 B.C. The Missouri figure is of sandstone, a material used largely in the three southernmost provinces of Upper Egypt, where this statue was most probably carved. Idi himself very
Three views of the fine Egyptian statue of the 11th Dynasty, which was given to the University's Museum of Art and Archaeology by Mr. Leonard Epstein of New York. Shown on preceding page is a painted limestone monument, acquired from the Chorn Memorial Fund. The Museum is located in Jesse Hall.

Museum continued

likely came from the vicinity of Aswan, the area which will soon be flooded as a result of the building of the High Dam, and in which great rescue efforts are now being made to save as many antiquities as possible.

The statue of Idi is an excellent, if provincial, example of private sculpture from the latter part of the Old Kingdom. Its massive appearance is characteristic of the period; clearly it was carved in four faces, and the transitions from side to side remain angular. It is thus best appreciated when seen from each side rather than from an angle. The spreading wig and the short neck add to the impression of solidity and compactness, unbroken by detail in the delineation of the body, arms and legs. The toes and fingers are summately treated; the clenched right hand held an object now broken off. The broad face, full cheeks, thick lips, wide nose and large oval eyes under straight, heavy brows, although the result of stylization typical of the period, must give us some impression of the actual appearance of Idi, Count and Overseer of Priests.

Three objects of great beauty and interest, invaluable both for exhibition and for teaching, have already been acquired from the Chorn Memorial Fund. The most ancient of these is a Greek vase of Corinthian manufacture, an olpe, or pitcher, about twelve inches high, of the style known as Protocorinthian, which dates about 640 B.C. In keeping with the Orientalizing style then current in Greece, of which Corinth was the most flourishing center, the vase is decorated with bands of animals—lions, bulls, goats, rams, boars, or water birds and of the monstrous, hybrid creatures—sirens and sphinxes—imported from the east. Painted in black glaze with details incised or added in red paint, the figures form a tapestry-like design that is further enriched by the numerous dot rosettes interspersed in every available space. Similar rosettes in white paint on red glaze decorate the neck and the rondelles on either side of the handle. Rays decorate the bulbous bottom of the long, sac-like body. The remarkable freshness of the figures, the brilliance of the paint, the richness of the
design, combine to make this one of the finest examples of the work of the Sphinx Painter, whose emblem is to be seen in the top and third animal friezes. This is a Corinthian masterpiece for which there are few rivals.

Even rarer is a Roman bowl carved from a piece of richly striped agate, for such pieces were among the most prized possessions of the wealthy in the Roman Empire. This elegant bowl, a little more than two inches high and four and one-half inches in diameter, is said to have been found in Egypt. While always a luxury item of great value, such vessels were well known in the Empire and large numbers of them were adapted to use in the Christian Church, usually with a rich embellishment of gold and silver settings. Not many have remained in their original form; the one now in Missouri is one of a very few known to be in America. Such vases of agate were imitated in glass for the less wealthy; the imitations are now better known and often valued as much as the originals.

The Missouri bowl, of a simple spreading shape with an incurved rim, was probably carved in the second century A.D. The agate shows wide variations in color, from spots of highly translucent light brown to areas of red-brown and dark brown contrasting with traces of light buff and white. It is a rich combination of ever-changing color that is particularly lovely when seen against a bright light. One can well understand the fascination these bowls held for the Romans and the reasons for which they were sought after and highly prized. At the same time, we cannot help but wonder how often the lapidary met with failure before producing a complete and perfect vessel, such as that which is one of our most prized acquisitions.

An equally important purchase from the Choren Fund is a painted limestone monument on which a boy is portrayed in fairly deep relief within an architectural setting formed by an arch on columns or pilasters. Reliefs of this type have in recent years been found at Sheikh ‘Ibada in Middle Egypt, the ancient Roman city of Antinoopolis, and it is to the end of the Roman period in Egypt, about 300 A.D.,
Museum continued

that this piece of sculpture is to be dated. While often termed "Coptic," which implies a connection with Early Christian Egypt, it is more likely that the youths shown are "temple boys" associated with the Isis cult. The objects held in the two hands may well have cult associations; in the left hand the boy holds what seems to be a bunch of grapes, colored a bright blue-green, in the right hand a folded object, painted red, which is more difficult to identify, possibly of cloth although it may be bread. The flesh parts have a pinkish hue, the garment is white, the hair brown, lips red, eyes white with black irises. The figure stands out against a dark red-brown background; a lighter reddish tone is used on the arch. The ensemble is notable for its simple charm and is interesting as an example of provincial art of the Late Roman Empire, of the kind which served as the prototype for the Christian art of Coptic Egypt.

The four objects we have chosen to present here are but a small part of the acquisitions of the Museum of Art and Archaeology for the year 1960, the total list of which includes pieces dating from the fourth millennium B.C. almost to the present time but they epitomize the enrichment that the museum has enjoyed thanks to the interest of alumni and friends. The continuation of this interest will rapidly make the University of Missouri museum outstanding among collegiate art collections.

Saul S. Weinberg, Director
Museum of Art and Archaeology

Mystical 7 and the first woman member of the University Debating Team. She was also Phi Beta Kappa.

Mrs. Hazard received an A.M. in Psychology from the University of Kansas and did further graduate work in Clinical Psychology at the University of Chicago and the University of Pittsburgh. Teaching in public and private secondary schools of Kansas City, she was for seven years Director of Sunset Hill School, a private elementary and secondary school for girls. In 1939 she moved to Pittsburgh where her husband began an illustrious career with Pittsburgh Plate Glass Company. From 1944 to 1953 Mrs. Hazard was a member of the Psychology Department at the University of Pittsburgh as teacher and counselor.

Like her husband, Mrs. Hazard is prominent in community service in Pittsburgh. She is a member of the Pittsburgh Board of Education and the Commission of Public Library Development in Pennsylvania.

Working your way through college—the legendary success story enshrined by alumni since the turn of the century—is impractical today, and almost impossible. Twenty or 30 years ago, pre-war University students could work part-time and pay their entire fees, book costs and living expenses singlehandedly. But today, with increased academic pressures, more library work and stiffer course requirements, students have less time to work than their fathers may have had in college.

In spite of the squeeze, many students still find time for jobs. But part-time work can’t put full-time students through college anymore. Help is needed from parents and from scholarships and student loans.

Three years ago, promise of a sharp increase in the need for loans and scholarships prompted the University to make plans for a wide expansion of the facilities to offer financial help through an office of aids and awards. President Elmer Ellis and Dr. Thomas A. Brady, dean of extra-divisional administration, set up an outline of policy for the enlarged facilities. The man they picked to head them was a lean administrative assistant with a kindly face and a proven ability to handle student problems: Allan W. Purdy.

Under Purdy, the University operates what is in
effect 1) a student employment agency; 2) a scholarship board to relieve professors of related administrative details; and, 3) a low-interest-rate student loan service.

Five months after Purdy took over, the University had only $34,610 on loan to needy students. By next month, money on loan to students will exceed $1 million. Scholarships and awards this year will provide M. U. students with more than $250,000 and working students will earn more than $1,683,000. Purdy’s office has located jobs for a large percentage of the 2,000 students working for the University and 1,000 more who have jobs in Columbia stores.

Jobs, scholarships and loans vary, of course, with each student’s financial need. But as functions of Purdy’s office, they are interdependent. “If a student has time for a job,” he says, “we try that as a solution to his problem. If the job isn’t enough and a scholarship is available, he can take advantage of an aid or grant. Often, a loan is the only solution. Any one of these—or all—may be necessary to see a student through college.”

In Purdy’s office, scholarships and loans are arranged for by him and his assistant, Joe Henry, a pre-doctoral student who serves as a counselor. Most of the employment services are carried out by a third staff member, Mrs. Bonnard Moseley.

When a student needs help, Purdy and his staff are there to listen to him. Often a professor or personal friend of a needy student will report the case to the Aids and Awards Office and Purdy will contact the student to see if his office can help. After a preliminary interview, Purdy determines whether the student really needs financial help. “Sometimes a student will tell a dean he’s broke when actually he’s broken-hearted,” Purdy says. “Perhaps his best girl got married or his classmates won’t accept him; then he’ll use financial need as an excuse for leaving school. Often, it’s just that he’s managed his money poorly. We can help him there, with a few suggestions.”

Together, the student and Purdy figure out the cost of going to college. The minimum estimated cost, according to the University, is $1,100 a year for room and board, fees, books and incidentals. Clothes, travel costs and extras, which add another few hundred dollars to the total, make the figures more realistic. From there, Purdy shows his client how to cut corners. Dorms are less expensive than fraternity houses; is a car necessary? have you been buying used books? how many dates a week do you spend money on? Often, paying for a college education will mean some sacrifices by the student.

If the student’s academic load will permit, or if he can enroll for fewer credits the next semester, the first step is to find part-time work. Purdy estimates students can earn up to $50 a month by working about 15 hours a week. Of course, like all estimates of finances, this one varies greatly with the student.

Most University jobs pay about 75 cents an hour to inexperienced student help in libraries, labs and cafeterias. Jobs in downtown Columbia average about $1 an hour. Some of the most popular jobs are those as waiters in cafeterias. In these jobs, students work during meal hours and so have afternoons and evenings free for study. At the University, cafeteria workers receive wages and pay for their meals; at Stephens and Christian Colleges, the students work during two meals and are given three meals as pay.

If no job is available or the student has no time—and if the applicant’s grades are high enough—Purdy tries to fit him into one of the University’s many scholarship programs. Often the scholarship will be small, but just enough to keep a student in school. “There are no full-ride scholarships that pay full fees and expenses,” Purdy says. “We just don’t have enough money for that.”

The amount of money available for scholarships at most universities has been exaggerated in magazine articles, Purdy says. He and hundreds of scholarship administrators throughout the country are losing a struggle for realism in the nation’s press. “Here’s where I get mad,” Purdy says. “One writer will uncover a scholarship that wasn’t used last year. Then he’ll sell a sensational article to a national magazine telling everybody how scholarships are just sitting around, waiting for someone to claim them. This couldn’t be further from the truth.”

At the University, a small scholarship for study in Europe lay unused for three years. The scholarship set aside little more than a hundred dollars a year—if a student could match that figure with his own

---

LOAN FUND DEPLETED

For the first time in its history, the University has currently on loan to students on the Columbia campus a total of $1,028,257.15—the entire amount available. Allan W. Purdy, director of aids and awards, said this includes about $500,000 from the National Defense Education Act, and a similar amount from private donors, bequests and wills.

The Columbia divisions lent about $4,814,000 to students in the five-month period from last September to February—this is more than the total of loans made last year. Purdy attributes the increase in loans in part to students not earning as much money last summer; parents of students having to retrench because of a business recession; and the increase of about 1,000 in enrollment at the University during the fall semester. The only new loans that can be made at present, Purdy said, are from money being repaid by student borrowers who have graduated and are now employed.

It has been the practice for the University to invest the money not currently needed for loans. For the first time, the University at Columbia had to liquidate all of its surplus loan funds, which it had invested. Additional allotments under the NDEA are not expected until next September.
Battaglia's 'The Face of Missouri'
BATTAGLIA'S MISSOURI IMPRESSIONS

Published by the University of Missouri Press, "The Face of Missouri" is a photographic essay by Lee Battaglia, B.J. '58, now with National Geographic Magazine. Of 1,700 photographs taken, 100 have been selected. Reproduced here are scenes showing Westphalia's main street (page 7), the public library in St. Clair, the Missouri House in session, a spectator at the Veiled Prophet Ball, Christian College girls, and a class in City Art Museum, St. Louis.

Battaglia, native of Italy and now a U. S. citizen, emphasizes that his pictures are not intended as a comprehensive survey of the state or to show what is "typical," but represent "a small portion of what one personality has found memorable and meaningful in Missouri."
Dr. William Stephenson, the famous British psychologist who came to the University seeking freedom to do research, would like to give the same privileges to pre-doctoral students at Missouri—by cutting their course work in half.

Himself the recipient of two Ph.D. degrees, and an adviser to graduate students at Missouri since 1958, Stephenson thinks pre-doctoral students have "far too many courses to take" before they begin their dissertations. "Ph.D. students should have more latitude," he says. "For M.A. candidates the heavy course work in addition to the thesis is good training for further work. But when a student is working on a Ph.D., it's time he was truly on his own."

In place of half the course work, Stephenson suggests, more emphasis should be placed on the doctoral dissertation. "Students should spend eight hours a day on research for two straight years. That's the only real way to get at it. It's a good thing for students to do their research in collaboration, in some respects, with one or more classmates who are working in the same area. They learn from each other that way. What they produce is likely to be more thorough and more valuable than what one man alone could produce."

To Stephenson, whose job as Distinguished Research Professor of Advertising at the School of Journalism gives him access to computers, IBM machines and graduate assistants, twentieth century research is impossible without the proper equipment and working conditions.

He has the highest praise for the University's new Datatron 205 Computer, which he and his students use considerably. But he would like to see more laboratory space made available for basic research into individual and mass communication, from which advertising research draws its sustenance. He wants Ph.D. students to have more physical equipment.

"Research students should have their own rooms," he says, "where they can hold conferences, work and keep their research materials, just like faculty members. They should be given keys, desks and private cubicles—bigger than just a carrel in the library—to do their work. At the Ph.D. level, the student should feel that his work deserves a place inside the University building—that he's not just a course-comer."
"The emphasis for pre-doctoral students now is that they are getting instruction rather than research experience. A recent White House Committee has made much the same observations about a certain misplaced emphasis in instruction in this country generally."

An emphasis on producing better results has been on Stephenson's mind for most of his 38 years. Twenty-six years ago Stephenson fathered the famous "Q-technique" for social science and psychological research—a radical method for measurement that bases itself on the centrality of the self and not on measuring individual differences in personality. The Q-technique, now widely accepted among world universities, may well be the only truly, basic method of measurement upon which social science, in its subjective respects, can rely.

To the graduate students learning the Q-technique in his classes in communications theory and research methods in the School of Journalism, Stephenson is one of the most frank, entertaining, enlightening and enjoyable professors in the University.

Speaking rapidly in a distinctively British accent, Stephenson is one of the most highly-animate men on the graduate faculty. He smiles, winces, leans against the rostrum slowly, walks swiftly around in front of the room, scribbles half a name or the first part of a formula on the blackboard, and alternates between joviality and elegance. He explains communications research in terms of the people it seeks to describe and acquaints his students critically with famous psychological theorists, life-as-a-game, science and the value of the scientific method, brings academics to reality through everyday examples, cites instances from his own experiences and above all instills in his students an excitement for learning and a respect for science.

"I can't parrot back in 1-2-3 terms what he's taught me this semester," one M.A. candidate says, "but it's changed my thinking entirely and made me want to be more investigative and scientific."

To Stephenson, science is a way of life. Since his childhood, he has successfully compounded the arts with the sciences, fusing them in his own life to prove that they are interdependent.

The fusion began in grammar school near Durham, in the north of England—Stephenson's birthplace—
The animated personality of Dr. Stephenson is reflected in the photographs on these pages. They were made when he appeared on "Missouri Forum" on the University's television station. Moderator is Dr. Edward C. Lambert, at right.

Stephenson continued

when he first felt a conflict between his ambitions for the arts and the sciences. He liked physics and general science as much as he enjoyed practicing his skills at essay-writing, Latin and drawing. His choice—to attend Durham University to study medicine—was only a temporary one. He studied physics instead and took a first-class honors degree (similar to the American magna cum laude) in physics in 1923. Later, Stephenson was to combine his science with psychology and become one of the most versatile figures in British psychology.

At the age of 24, Stephenson had earned a Ph.D. degree in physics—a subject which overtook medicine as his first love at college. "Topping" his exams, he continued his research, having had several scientific papers published by the time he was 25. He received a college fellowship and used it in 1926, to study psycho-physical methods—a subject that he thought would give him a fringe area for his physics—at University College at London University. Studying under the famous psychologists Dr. Charles Spearman and Sir Cyril Burt, Stephenson earned a Ph.D. in psychology in the Arts Faculty at London University in 1929—his second doctorate, at the age of 27.

On Christmas morning of that same year, in "the old priory church on the moors at a place called Muggleswick, where we both had cottages," Stephenson married Miss Mamie Richardson, a fine arts graduate he knew from Durham.

Together, they began married life on Stephenson's salaries as a part-time research assistant to Dr. Spearman, part-time tutor and freelance journalist. "I did articles for the London Evening Standard," he says. "I used to write articles on dreams and the like, applying psychology, and ran a series of psychological tests called 'Psycho-zigs.' I also wrote some articles for the Sunday Chronicle."

It was then that Stephenson became interested in the mathematical methods of psychology, many of which are used in operations of research today. "I developed a major interest in factor analysis," he says. "Dr. Spearman taught me very little psychology, but a great deal of methodology."

With math, science and psychology in combination, Stephenson would have a natural opening in statistics and marketing research. But that would come later, after more study.

In 1935, Stephenson was appointed assistant director of the new Institute of Experimental Psychology at Oxford. He received another degree—an M.A.—at Corpus Christi College at Oxford. During the next 13 years as an Oxford don, Stephenson became well-known as a research psychologist. He was Oxford's first Reader in Experimental Psychology and was involved in developing the Honors School in Psychology, Philosophy and Physiology at Oxford.

Between 1940 and 1946—the war years—Professor Stephenson had no students. Instead, he was kept busy working for the British government in psychological research. For the Central Trade Test Board in the Air Ministry, Stephenson developed the mental testing system used by the RAF and WAF. In 1943, when he completed the system, he returned to Oxford.

The British Army next commissioned him to work as a consultant to the Director-General of the Medical Services. With a War Office appointment as brigadier-general, Stephenson visited India to advise on the caliber of Indian officers and wrote training manuals for instructors in the British Army.

By 1947, with the war over, Stephenson held jobs as
an Oxford Reader in Experimental Psychology, an
army officer, and a consultant for motivational re-
search for the J. Walter Thompson advertising agency
in London—to eke out expenses so I could live at
Oxford." Probably, he was the highest-paid psychol-
ogist in England at the time.

That year, Stephenson received an invitation that
would later make him take out an American citizen-
ship and leave England for permanent residence in
the United States. The American Psychological As-
nociation granted him $1,000 to visit this country to
tour U. S. psychology departments. His $1,000 got
him as far west as Chicago, where he later stayed for
a year as a visiting professor at the University of Chi-
cago—to get a better look at the U. S."

After looking, Stephenson decided that "the oppor-
tunity for my kind of work was better here than in
England. In England, there was not much opportunity
for graduate research; most of the colleges are only
undergraduate. At Chicago, there were a number of
excellent postgraduate students. For the first time, I
felt I had freedom to do what I wanted." His family
joined him in Chicago.

Stephenson stayed a second year, also doing mar-
keting research for Chicago advertising firms, serving
as a consultant to a trade-mark law firm working on
his Q-technique. His study of human behavior at
Chicago kept him in contact with some of the greatest
psychological and sociological minds in the country:
Carl Rogers, David Riesman, Everett Hughes and
others.

Stephenson spent two summers as a visiting profes-
sor at Berkeley and a spring semester as a Walker-
Anne professor at the University of Washington in
Seattle. In 1953, he left Chicago, chiefly for financial
reasons. "I simply had to make some money," he says.
"My children were getting older and I had to keep
my head above water. My salary wasn't enough."

He considered working at the National Institutes
of Health in Bethesda, Md., but couldn't find a house
in Maryland. The housing situation was easier in
Greenwich, Conn., and Stephenson accepted an offer
with a research firm. "But that," he says, "though
most fascinating in its research opportunities, was too
time-consuming; I didn't have enough time to do
work in my own field."

The time and freedom Stephenson wanted were
available at Missouri. The D'Arcy Advertising Agency,
for whom Stephenson had done some work in New
York, introduced him to the School of Journalism and
helped materially to make an attractive appointment
for him as a Distinguished Research Professor—one
of the first such professorships in the University.

"At the University," he says, "it's most delightful
and free. One can work without any undue interrup-
tions. We have enough to satisfy us between our trav-
eling occasionally to New York and Chicago and
the various cultural events at the University. And
we've made more friends here in a few months than
we made in Greenwich in all those years. We like it
here very much." The traveling he refers to usually
involves consultation work.

Liking the U. S enough to stay here caused Ste-
phenson to take out American citizenship in 1956. "I
felt I should show the way to my children," he says.
"I have a very warm attachment to Britain, but I like
the idea of the great social equality we have in this
country; you don't see that in Britain as much. I
want to educate my children here. Here, especially my
girls can have an equal opportunity for good edu-
cations."

Stephenson's four children have had the oppor-
tunity for the education he wanted. His daughter
Averill went to Chicago University; another daughter,
Mariel, will be graduated from Bennington College
this June. A son, Charles, attended the University of
Wisconsin under a Ford scholarship and was gradu-
atcd from the Yale Law School. And his youngest
son, Ricky, is at the University Laboratory School in
Columbia (Mo.).

Contributor to several psychological journals and
co-editor of others in the past, Stephenson will pub-
lish his third and fourth books later this year. One
will concern a new theory of mass communication;
the other is Intimations of Self-Psychology.

After work, he enjoys golf, long walks, criticizing
his wife's paintings and nurturing a quiet war against
cigarette-smoking, which he thinks is annoying to
non-smokers.

His students at Missouri, he says, "are just as good
as any graduate students I've seen anywhere. I'm greatly
impressed with the quality of the M.A. theses I've
seen here at the School of Journalism. The idea that
American students don't work is quite mistaken, at
least on the graduate level."

At the graduate level—particularly the pre-doctoral
candidates—Stephenson hopes to attract the sorely-
nEEDED research personnel for mass communications
theory. "Such research," he says, "requires a liberal
education beforehand, but it can be useful in socio-
ology, psychology and political science as well as
journalism. We need more people in the field who can
do research. That's why the right techniques are so
important."

Importance of technique is emphasized by Ste-
phenson every day. He is trying to show that "the mass
media are a positive function in respect to leisure—
not an evil 'hidden persuader' of any sort." His study
of the acceptance and influence of mass media—newspapers, magazines, radio and television—on the Amer-
ican public will be the basis for the radical change
in the media which should come in the next few
years.
Recipient of Humanities Award

Russell L. Dearmont, LL.B. '14, received the 1960 Humanities Award in St. Louis December 26 in ceremonies attended by 100 civic and religious leaders, business associates, relatives and friends. As the second recipient of the award, bestowed annually through the Globe-Democrat by an anonymous donor, the 69-year-old railroad president, lawyer and community figure declared:

"If I've done things for which I deserve consideration for such an award, it's because I learned early that everyone I meet has some talents I don't have."

The Humanities Award, which carries with it a gift of $1,000, gives recognition to the person in the St. Louis area "whose lifetime exemplifies best the universal ideal of the Fatherhood of God and the Brotherhood of Man."

Richard H. Amberg, publisher of the Globe-Democrat and chairman of the award committee, made up of religious and business leaders, said of Mr. Dearmont:

"His whole career has been an adornment of this community from the time he kept the Ku Klux Klan out of Cape Girardeau to his leading and caring for the homeless during a flood in that area."

"He has helped the process of integration here, and for 15 years was Protestant co-chairman of the St. Louis chapter of the National Conference of Christians and Jews."

"He has truly lived up to the ideals of this award. The community honors itself when it bestows such an award on Mr. Dearmont."

The award read in part: "Russell L. Dearmont is the continuing illustration of a life well-lived. From his earliest days, his every word, thought and deed has been for his fellow man."

"A successful lawyer, legislator, railroad president and civic leader, he has time and again gone far beyond any reasonable requirement of conscience in striving for tolerance, compassion and kindness toward all peoples."

"A tireless fighter for good causes, his gracious nature and towering integrity, his leadership and his shining example, have achieved better understanding and lighted the way toward the higher ground of goodwill and mutual respect."

Mr. Dearmont, a native Missourian, received the St. Louis Award in 1958 and an honorary doctorate degree from the University in June 1959. He graduated from Southeast Missouri State College at Cape Girardeau in 1911 and from the University of Missouri School of Law in 1914. He returned to Cape Girardeau to practice law and became a leader in a wide range of charitable activities. When Southeast Missouri Hospital was completed, he became its first board chairman.

In 1948, he was elected State Senator and won public recognition for leading the fight against high interest rates of small loan companies operating in the state. He was co-author of Missouri's income tax law. In 1952 he was an unsuccessful candidate for the Democratic nomination for governor. He was appointed general counsel for the trustee of the Missouri Pacific railroad in 1956, and played a leading role in the financial rebuilding of the road. He was made vice-president in 1956 and president the following year. He is now chairman of the board.

Besides serving on the Police Board, Mr. Dearmont has been active in Boy Scout and YMCA activities, the successful drive for a Jewish Community Center, and has served on the board of the Municipal Opera and the Metropolitan Chamber of Commerce.
Traywick to head college

The man selected to be president of Southwest Missouri State College at Springfield next September is an alumnus of the University of Missouri, Dr. Leland E. Traywick, now assistant dean of the College of Business and Public Service at Michigan State University. Dr. Traywick, a native of Okmulgee, Okla., received an A.B. in 1926 and an A.M. in 1939 from the University of Missouri. He has been named to succeed Dr. Roy Ellis who will retire after 35 years as SMS president.

Dr. Traywick has been with Michigan State since 1947, serving as acting director of the school’s Bureau of Business and Economic Research; acting head of the department of economics; chairman of the board of trustees of the Michigan Council on Economic Education, and director of the university’s Economic Education Workshops. He is temporarily on leave from Michigan State, serving with the National Committee for Economic Development.

Before joining MSU he was assistant professor of economics at Western Reserve University, 1946-47; assistant in the Department of Economics at the University of Illinois in 1939-42; and instructor at Stephens College, 1937-39. He majored in history at M.U. and received his Ph.D. at the University of Illinois in 1942, writing his doctoral thesis on “Parallelisms in the Economics Ideas of Karl Marx and Thorstein Veblen.” He authored “Get Good Grades in College” in 1950, co-authored the text, “Readings in Economics” in 1958, now is co-authoring with George Soule “Principles in Economics.”

Dr. and Mrs. Traywick have two children, Eric, 12, and Harriet, 10.

Dr. Roy Ellis is also an M. U. alumnus, receiving A.B. and B.S. in Education degrees in 1914. He earned advanced degrees at Harvard and Columbia. The University of Missouri awarded the veteran educator an honorary doctorate degree at its June Commencement last year.

Freshmen tests scheduled

Freshmen who enter the University at Columbia or Rolla are required to take Freshmen Placement Tests, which help in planning an appropriate program of study. These tests will be administered at Columbia each Saturday morning (9 o’clock) from April 8 through June 24, at 203 McAlester Hall.

Outstate testing centers will give tests for students planning to enroll at Columbia or Rolla, at 9 a.m. local time, on the following dates: March 18, Sikeston; April 8, Springfield Parkview High School, Hannibal Senior High School, Lindbergh High School; April 15, Chillicothe and Raytown high schools; April 22, Kansas City Southwest; April 28, St. Louis City, O’Fallon High School; April 29, Rolla High School, Kansas City Paseo; May 13, Webster Groves High School.

Briggs takes federal post

Frank P. Briggs, B.J. ’15, publisher of the Chronicle-Herald at Macon, Mo., and former United States Senator, has been appointed Assistant Secretary of the Interior for Fish and Wildlife. Briggs, with fourteen years of service on Missouri’s four-man Conservation Commission, is the first Missourian to be appointed to the federal post. He will supervise the Bureau of Sports Fisheries and Wildlife and the Bureau of Commercial Fisheries.

Briggs was in the Missouri State Senate, where he had served for twelve years, when he was appointed United States Senator in 1945 to succeed Harry Truman when Truman became vice-president. He was president pro tem of the state senate from 1941 to 1943. His first appointment to the Conservation Commission was in 1947, and he was serving his third six-year term when his federal appointment was announced. He was mayor of Macon from 1930 to 1933, the year he went to the Missouri State Senate.

A lifelong newspaper man, Briggs formerly edited papers at Shawnee, Okla., and Fayette, Moberly and Trenton, Mo. He is an active member of the National Press Club in Washington and the Missouri Press Association.

Four of his five children attended the University. They are Eugene A. Briggs, B.J. ’43, of the Portland (Ore.) Reporter; Thomas Briggs, ’39, advertising manager, Macon Chronicle-Herald; Ruth B. Bratek, B.J. ’45, assistant professor of journalism, University of Missouri; and Mrs. M. R. Ramon (Dorothy Briggs, A.B. ’50) whose husband heads the language department at Bowling Green University.

Honor for Red Graham

R. A. (Red) Graham, Jr., ’37, of Westport, Conn., representing the University, has been nominated to the Touchdown Club of New York. Red, who is with IBM at 99 Park Avenue in New York, played football at three schools: Rutgers, M. U. and Northeast Missouri State Teachers College at Kirksville. After college he played professional football with three teams — Danbury Trojans of the American Professional Association, Rochester of the New York Professional League, and the Charlotte Clippers of the Dixie League. Red was proposed for the Touchdown Club by Dr. John Staige Davis, Jr., former University of Virginia star.
M.U. fund requests at very minimum, Ellis says

Below is a statement made by President Elmer Ellis of the University of Missouri in connection with his appearance on February 6 before the Subcommittee of the House Appropriations Committee:

"Our situation now before the General Assembly is briefly this. We have made very careful requests for funds for the next biennium. In our best judgment these are the very minimums that will enable the University to do the high quality of work that the State expects from us. If the State should fail to supply some portion of the funds requested, it would mean that, by that much, we cannot meet the demands which the people of the State make upon the University.

"Governor Dalton, in the light of the revenues available, has made the best allocation he could make to the University. He has observed that other state agencies, public schools, mental health, and highways, also need substantial increases. Very wisely he has put most of the increases to the University and state colleges on personal service, for this is most fundamental. His recommendations are as good as anyone could make, considering the needs of the other agencies and the revenue in sight from present and proposed taxes.

"The fact we have to face up to, however, is that in so far as the University is concerned these allotments will permit us only to hold our present position among the other state universities in the surrounding area. These states have sessions of their General Assemblies at this time, and in all cases bureaus of the budget, state boards, and governors, are making recommendations. The best judgment I can make is that the University appropriation figures which Governor Dalton has submitted will, if enacted, probably enable us to hold the relative position which we now occupy. If the General Assembly should reduce these recommendations we would fall farther behind our neighbors in our level of support, as we did two years ago when all the states surrounding Missouri, except Arkansas and Kansas, increased their support percentage-wise more than we did in Missouri. I think the public should realize what this situation is, because with our revenue prospect as it is, higher education comes out primarily as a holding operation rather than making progress toward meeting the increasing demands. If the General Assembly does not approve the Governor's recommendations, we will fall farther behind in the national scale of support to public higher education.

"If Missouri fails to bring its support of higher education up at least to the national average, our economy could suffer measurably by a shortage of productive research on important problems of the State. Similarly the quality of our entire social structure could fail to advance as rapidly as it should, on account of too little and too poorly trained leadership in all phases of our culture. This the people of the State surely will not permit to happen."

Kahler wins Washington Award

The newest honor to be conferred upon William V. Kahler, B.S. M.E. '22 and president of Illinois Bell Telephone Company, is the 1961 Washington Award "for exceptional leadership in advancement of communications, for distinguished service in civic affairs, and for aid to education and humanity."

The award, administered by the Western Society of Engineers, was presented to Mr. Kahler at a dinner in Chicago March 2. It is "conferred upon an engineer by fellow-engineers for accomplishments which pre-eminently promote the happiness, comfort and well-being of humanity." After the presentation he addressed the dinner meeting on "Plowing a Straight Furrow."

The recipients are chosen by the Washington Award Commission, made up of representatives of five engineering societies and institutes. Previous winners of the award, founded in 1916, have included Herbert Hoover, Charles F. Kettering, Daniel C. Jackling, Henry Ford, Arthur Holly Compton, Lillian Moller Gilbreth, Robert E. Wilson and James R. Killian, Jr.

Mr. Kahler, a native of Missouri, has received numerous awards for a variety of outstanding services in the public interest. In 1951 he received from the University its Honor Award for Distinguished Service in Engineering.

'Day' for Richard King, '05

Richard King, who attended the University from 1903 to 1905, was honored by the city of Corpus Christi, Texas with a special observance of "Richard King Day" January 12. Mr. King, a grandson of the founder of the King Ranch, has lived in Corpus Christi since 1910 and is regarded as one of its most distinguished citizens.

He is chairman of the board of the Corpus Christi State National Bank, and an active cattleman. He is a director of the Frost National Bank of San Antonio, Texas Mexican Railway Company, Central Power and Light Company, and Southwestern Life Insurance Company.

Mr. King has served as a Commissioner of the Nueces County Navigation District for 58 years, having been chairman for 23 years until his voluntary retirement. It was during his tenure as chairman that the Port of Corpus Christi experienced its greatest development.

Mr. and Mrs. King have two sons: Richard King, Jr. was a student at the University in the mid-20s.
The record breakers

The two major factors in the recently completed, successful basketball season were the young men pictured at the right. Charlie Henke and Joe Scott not only obliterated all previous Missouri scoring records, they also sparked a great comeback to bring the team out of mid-season slump and into a first division (7-7) finish in the Big Eight Conference. Coach Sparky Stal-
cup's team ended in a fourth place tie with Colorado.

The Tigers really hit their stride in their last three games against Iowa State, Nebraska, and arch-rival Kansas. The Tigers burned up the nets in the Iowa State game with a seasonal high of 95 points. They exceeded this and broke their all time conference scoring record with 97 against Nebraska. Against Kansas the point production fell off slightly but satisfaction reached a high point as the Tigers upset the Hawks 79-76 and eliminated them from contention for the conference title, won by Kansas State. The latter game, a nationally televised affair, was marred by a free-for-all, precipitated by K. U. star Wayne Hightower, but unfortunately joined by both benches and by some over-zealous fans.

Big, quiet Charles Henke from the hamlet of Malta Bend, Missouri, who paradoxically was banished from the game for fighting with (or perhaps we should say fighting back) Hightower—who was also banished—scored only twenty points in his final appearance. "Only" is a well chosen word in this instance because Charlie averaged almost 25 points per game for a new all time high average for Missouri players and a place among the top ten scorers in the nation, an elite group which excludes everybody's All American Jerry Lucas of Ohio State and many of the other "name" players. And Charlie had his 20 points with 14:49 to go in the second half, when the fisticuffs flared, with Missouri ahead 48-44. Henke's 591 points for the season also broke the single season scoring record formerly held by Assistant Coach Norm Stew-

The only major record left unsathed by consistent Charlie was the single game scoring record of 44 points set by Lionel Smith in 1957, and Charlie's excitable, aggressive teammate Joe Scott got this one with his 46 point harvest in the Nebraska game. This spectacular performance by the gunner from Gainesville, Missouri not only set a new Conference mark for backliners, it also equalled the conference record held by Wilt Chamberlain and also tied the single game field goal record held by Clyde Lovelette. Scott ended the season with 397 points and joined the select circle of 1000 point scorers with a career total

Boron minerals to M.U.

Geological Museum now has one of best collections; big gift from Col. C. M. Jenni

The University has acquired one of the best collections of boron minerals in the country through recent acquisitions by gifts or by trading mineral specimens with other collections.

The collection, which is in the University's Geological Museum in the department of geology, contains more than 100 different species of boron-containing minerals. Dr. Walter D. Keller, professor of geology, said it includes one of the two known samples of teepite, a compound of boron with chlorine and sodium; the other sample is in the Harvard University collection.

The majority of the boron minerals specimens were acquired with a collection of approximately 20,000 geological specimens from all parts of the world given to the University by Col. Clarence M. Jenni, U.S.A. Ret., director of the University Geological Museum. More than 1,000 different species of minerals are represented in the collection from Col. Jenni, who since he has been director of the museum has obtained additional species of boron minerals by exchanging for them specimens duplicated in the University collection.

The boron minerals in the collection have been catalogued and filed in cabinets in the museum, with a number of outstanding species on display in a case in the Geology Building.

Boron, which never occurs in nature in free or pure form but is found abundantly in compounds with other elements, as in the familiar borax and boric acid, has become increasingly important in modern industry and technology, including the rocket program. For that reason, Col. Jenni said, the University's collection is of great value for teaching and research in the sciences and engineering.

In addition to being one of the most efficient rocket fuels, since it "burns" intensely when in combination with certain other elements and can be used in the solid state, alloys containing boron are extremely hard and heat resistant, and are used for rocket noses. Such alloys are also very important for industrial purposes where high-temperature equipment is essential. In recent years it has become one of the most important elements—it is not a metal but a semi-metal—in the steel industry as it greatly increases the hardness of iron alloys. It is especially useful in the manufacture of very hard cutting tools.

The United States has the bulk of the known deposits of boron minerals, most of this country's supply coming from California. About half the world supply of borates is obtained from the Mojave Desert in Southern California.

Boron minerals in the display case in the Geological Museum include some of the more unusual species, and also some of those from which boron is recoverable. One of the specimens is kernite, which is abundant in California, is easily refined, and has the advantageous peculiarity that when it is melted the water molecules from moisture in the air become part of the structure of the boron compound and greatly increase the volume of the melted product.

Col. Jenni, who saw service in both World Wars and retired from the Army in November, 1953, has made the study of geology and paleontology a hobby for the past 30 years. Much of his early collecting was in the field of paleontology, and he acquired a large collection of fossils. About ten years ago he began collecting mineral specimens.

He was born in Webb City, Mo., and lived for many years, while on inactive duty, at Festus, Mo. His two daughters are graduates of the University of Missouri, where they majored in geology after becoming interested in the science from going on field trips with their father.

One daughter, Mrs. Betty Jean Gatchell, now of Oklahoma City, received her A.B. here in 1945. She is married to a University graduate, John H. Gatchell, who received an A.B. with a major in geology here in 1946, and an A.M. in geology in 1948. The other daughter, Mrs. Dan Whitten of Tulsa, Okla., the former Anne Marie Jenni, received her A.B. here as a major in geology in 1950.

While the daughters were in the University Col. Jenni, at their request, loaned the University a collection of fossils. Several years ago he gave them to the University for permanent use in research and teaching.

Matheson writes war novel

Richard B. Matheson, a 1949 graduate of the University School of Journalism, is the author of the war novel, "The Beardless Warriors," published by Little, Brown and Company, Boston. Although this is Matheson's first attempt at a war novel, he is no stranger to the profession of writing. He is the author of the science fiction book "The Shrinking Man" which was adapted into a screenplay. He is also the author of "Someone Is Bleeding" and "Fury On Sunday," mystery suspense novels; "I Am Legend" and "A Stir of Echoes," science fiction novels; and "Born of Man and Woman," a book of science fantasy short stories. He has written several "Twilight Zone" teleplays. He also helped create the original music for "Dark of the Moon" in 1949.

Matheson, a free-lance writer, lives at 2213 Venito Rd., Woodland Hills, Los Angeles, Calif., with his wife and three children. A native of Allendale, N.J., he served 19 months in the European Theater with the U.S. Army during the Second World War, and was awarded the Combat Infantry Badge. While a student at the University of Missouri he was a member of Kappa Tau Alpha, honorary fraternity in journalism; and Phi Mu Alpha, honorary musical fraternity.
Helping those who help themselves

continued from page 6

money, he was given the scholarship for language courses abroad. "You can see how little $100 would help a student who’s planning to study in Europe," Purdy says. "So no one applied for a few years and the scholarship money accumulated. This past year the scholarship had built up to $1,000—a figure that meant something to a student. Today someone is using that money to study in France. The scholarship is being used—and to greater advantage than it would have been three years ago.

"Unused scholarships? On the contrary, we don’t have enough scholarships," he says. "We’ve had to limit their use only to our most needy students. Today, most scholarships are given for financial need, not merely as recognition of scholarly excellence as it was years ago. A student still must show good grades to receive scholarship help, but need is an important criterion."

The University supplies about two-thirds of the scholarship dollars from its general revenue fund. There are 500 Curators’ scholarships for freshmen, scholarships for science, music and other academic competition, 100 sophomore scholarships, 32 for graduates of junior colleges in Missouri, 25 graduate fellowships and others for summer students, foreign students and refugees.

The other one-third of M. U.’s scholarships are gifts from organizations, businesses, alumni and friends. In the past, donors often have stipulated that money should go to a specific class of student, such as a white, Presbyterian sophomore majoring in agriculture from Dade County (fictional). "We’re trying to get donors who want to specify scholarship recipients to say ‘preferably,’" Purdy says. "That way, if a scholarship states, ‘preferably to a student from the Macon area’ and no one from Macon needed financial help, we could use it for a New Madrid student.” Purdy also tries to avoid racial and religious limitations.

More scholarships will have to be provided from outside sources, Purdy says. When the national emphasis on education broke full-force after the Korean War, most prospective donors thought in terms of science grants. "But now," Purdy says, "we’ve matured to the point where we can see the country needs good journalists and foresters as well as scientists and engineers. Some help already is being given students in non-technical fields.” Often, in this way, if a student cannot qualify for one scholarship, he is eligible for another.

But scholarships are limited and not every student has time for a job. So the University’s biggest service in financial aid is in student loans. With less time to work, students often find loans the only answer to the high finances that go with higher education.

The most important thing about loans for the student, Purdy says, is "Don’t borrow unless you really need the money.” Loans at M. U. are not handouts, he says. Students must offer to help pay part of the cost of college some other way.

The nine-fold increase in student loans at Missouri in the past three years is the result of rising costs and a national trend. First, publicity about student loans at schools all over the country has changed public attitudes toward loans. People no longer are afraid to ask for help. Second, the federal government has offered universities funds for loans through the National Defense Education Act.

The NDEA, which took effect in September, 1958, provides 90 per cent of the money for a loan. The University pays the other 10 per cent and the cost of service. In turn, the student must show need and scholastic ability (a C average) and be a full-time enrollee. No interest is charged for NDEA loans while the student is in school and for one year after graduation. At that time, the government charges 9 per cent interest. The student has 11 years to repay the loan. A special clause cancels 10 per cent of the loan each year if the recipient teaches in a public elementary or secondary school—under this rule, the recipient can cancel up to 50 per cent of the principle.

Loan applications fluctuate according to the business cycle. When the campus felt the effect of the re-
cession this past November, Purdy noticed a sharp increase in applicants. Often, if a student drops his job and takes out a loan, his grades will improve considerably—enough to keep him in school. Many times, short-term loans are needed in cases of sudden death in the family or a parent’s loss of a job. The loan service can provide for almost any kind of need.

About 2,000 students now attending the University have borrowed more than $1 million. Some medical, veterinary medical and graduate students find it necessary to borrow from $1,500 to $2,500. Married students also are big borrowers. The average undergraduate, just beginning to feel the need for help, borrows $200-$500.

On loans made by the University, parental signature is required for minors. Interest rates are 4 per cent a year. A group life insurance policy cancels the loan in case of the borrower’s death.

But NDEA funds are saturated and recently the University has loaned all its available funds for the year. Money from scholarships and loans is scarce, especially with a growing college population.

Students who borrow from the University pay back the money after graduation, at $25 a month, minimum. The interest collected is used to make funds available to other students—so in reality, the borrower isn’t paying for the loan service, he’s just providing more money for someone else to have the same opportunity.

With rising costs of living, the possibility of higher college fees and a tendency for more and more families to operate on the installment plan, Purdy expects the University’s Aids and Awards services to expand even more in the next few years. A decade ago, an administrator for aids and awards was almost unheard of; today, he is a necessity.

To Purdy, whose four children already have begun putting pennies in the cookie-jar, the best way to finance a college education is to plan for it years ahead of time and save. At college, the student must live conservatively and sensibly, Purdy says. Parents and students must ask themselves, Are we following a wise, prudent and conservative attitude in financing this college education?

Aids and Awards, which already has grown enough to occupy a special section of the University’s general catalogue, will have to grow in the future. “The trend would indicate that the loan service will grow the fastest,” Purdy says. “There aren’t enough scholarships, and jobs compete with study time.

“I think the state and federal governments will continue their activities in the student loan business (such as the NDEA). The Eisenhower administration started it and it looks as though the Kennedy administration will continue. Some growth will be needed just to keep up with increasing enrollment. Students will need more help.

“The universities have gone almost as far as they can on their own. State scholarship programs have been begun by Illinois, New Jersey, Indiana and others. In Missouri, the Governor’s Committee on Education Beyond High School recommended such a plan for presentation to the General Assembly.”

When Purdy began three years ago, the office had no precedents to follow in administering loans and scholarships—at least not to the present extent. Services of the Aids and Awards Office are free to every student. When he needs help, all a student has to do is call the office. A resonant voice will answer, “Hello, Purdy . . .” And the University will take it from there.

High award to ‘Wild Mammals’

“The Wild Mammals of Missouri,” by Charles W. and Elizabeth R. Schwartz, published by the University of Missouri Press and the Missouri Conservation Commission, has been named one of 27 winners in the 1960 Midwestern Books Competition.

Dr. William H. Peden, director of the Press, said selection of winners in the competition was based solely on typography, design, and quality of production, with content considered only in so far as the design has aided in conveying the spirit of the book and the aims of the author. Twenty university and commercial presses were cited in the competition.

“The Wild Mammals of Missouri” is the third of 12 books published to date by the University of Missouri Press. The almost 400 illustrations by Charles Schwartz, one of America’s most distinguished wildlife artists, include 56 full-page plates showing the animals in action in their natural habitat. Both Schwartz and his wife are biologists with the Missouri Conservation Commission in Jefferson City, and both are M. U. graduates.

The volume was completely produced within the State. John M. Lamoureux of St. Louis designed the book, and the printing and binding were done by Smith-Grieses Co. and the Interstate Binding Co., both of Kansas City, Mo.

The winning entries in the Midwestern Books Competition will be exhibited throughout North America, with preference given to requests from the Midwest. The books will be kept as a special collection in the University of Kentucky Library at Lexington.

Library banquet April 21

The second annual spring banquet of the Friends of the Library will be held at the Student Union on April 21, when Dr. John G. Neihart, Lecturer in English at the University, will be the speaker.

President and Mrs. Elmer Ellis will hold a reception for the organization members at the President’s House at 4 p.m. The executive committee and board will meet at 2 p.m.

Dr. Ralph H. Parker, University Librarian and ex-officio member of the Friends of the Library executive committee, said the 6:30 dinner will not be limited to active members of the Friends of the Library. Mrs. Charles C. Isely, acting secretary of the association, is handling reservations.
class notes

13
FRANK W. RUCKER, BJ., associate professor of journalism at the University, has been notified by the Iowa State University Press that his latest book, *Tested Newspaper Promotion*, has been selected by the Library Journal as one of the "best business books of 1967." Prof. Rucker is also the author of two recently published articles: "Let the Readers Help Build Circulation," in the February issue of *Publications Management*, and "Include More Contact Offices on News Beats," in the December issue of *American Press*.

14
HARLAN LOY SHRADER, BS Agr., has recently moved to 1913 E. 53 Terr., North, Kansas City, Mo. Before his retirement from the USDA, Mr. Shrader was active in the Washington D.C. chapter of the Amana Society, having served as secretary and as president of that group. After his retirement he spent several months in India working with the Agriculture Department, and enroute home last year visited several countries in the Middle East, Africa and Europe. He has been appointed to the staff of the International Agriculture Exhibition at Cairo, Egypt, and he expects to continue his travels and writings in Europe and Africa this summer.

16
DR. H. G. NEUMANN, BS Ag. ’16, AM ’18 and BS Med. ’27, who is now retired, has sent us a page from "The Octopus," an anonymous sheet that appeared on the campus when this century was in its early teens. Dr. Newman believes it was published in 1914. Articles from the sheet he sent included an appeal for men students to come out for varsity football; an appeal for the University to schedule tougher games; an account of a defeat of the Tigers by a Bella team with stars from widespread areas who had formerly played with other schools; and a criticism that the band played too much venerable music at athletic events. Through the years Dr. Newman has followed the football Tigers and, of course, got his biggest thrill out of the Orange Bowl game. His mailing address is Box 988, Ocean Springs, Miss.

JUDGE LAURANCE M. HYDE, LLB., AB ’10, LLB ’14, Chief Justice, Missouri Supreme Court, proudly displays his new granddaughter, Anne Farrar Hyde, born Nov. 20, 1960, born to his son, LAURANCE M. HYDE, Jr., AB ’50, LLB 57, and his wife, NANCY FARRAR HOLMES HYDE, ’50.

18
WILLIAM J. GROVES, BS Eng., 7210 Highland Ave., Kansas City, Mo., has retired after serving 25 years with the Missouri State Highway Department. For the past 20 years he has served as district construction engineer for a 12-county area in central and west Missouri.

MRS. ROBERT C. FRENCH (MARY PERRIVAL, BS Ed.) 205 N. Summitt, Topeka, Kan., writes that while her husband is an Amherst grad, M.A. never had a better booster, and adds, "that Orange Bowl game was really wonderful." Her daughter, HELEN FRENCH Symon graduated in 1947.

JOHN W. BALDWIN, BS Eng., M.E., ’19, 15 N. 4th St., Rittman, Ohio, is a retired engineer.

LOUIS L. ROTH, 141 W. Jackson Rd., Webster Groves, Mo., is senior partner in the Roth Insurance Agency.

20
BLANCHE M. MELVIN, BS Ed., is an analytical statistician for the U. S. Government. Her address is Bbon Helen Lane, PO Box 22, Mclean, Va.

21
JOHN P. RANDOLPH, LLB., 8711 Cranbrook Ct., Bethesda 14, Md., has retired as associate counsel for the Columbia Gas System Service Corp., and is in private practice, mostly as a Public Utility Law consultant.

W. J. EDDLEMON, BS Eng., 2009 Mississippi, Joplin, Mo., is a district engineer with the Missouri State Highway Department.

23
DR. VIRGIL F. PAYNE, AM, chairman of the chemistry department at Monmouth College, West Long Branch, N. J., has been elected chairman of the American Chemical Society’s Division of History of Chemistry. For 19 years was head of the chemistry department at Transylvania College, Lexington, Ky. While there, he became registrar of the college and chairman of the faculty. From 1942 to 1957, when he joined the Monmouth College staff. Dr. Payne is a chemist with the U. S. Signal Corps Research and Development Laboratory.

25
JOHN SAM WILLIAMSON, BS Agr., has resigned as state commissioner of agriculture and returned to the operation of his farm on Route 4, Columbia, Mo.

22 / MISSOURI ALUMNUS / MARCH '61
Agent's advice brings $125,000 sale
— opens door to additional service

Reese Allen enjoys working with top-level businessmen like Don Rasmussen. Not long ago, Reese established a $125,000 insurance program for him. Mr. Rasmussen, obviously pleased with the plan, has asked Reese to meet with his attorney and assist in setting up a corporation with a buy and sell agreement and related insurance program.

The businessmen Reese Allen advises realize the importance of the services he performs for them and their companies. Their confidence is reflected in his success. His first year in the business saw him qualify for our Hall of Fame and win our Rookie of the Year award.

Perhaps a career in life insurance appeals to you. If you meet our qualifications you'll receive a generous income while you're learning. We'll be glad to send, without obligation, a booklet explaining the responsibilities and rewards of representing New England Life. Write to us at Dept. A, Boston 17, Mass.

Or, if you have specific questions please write directly to Vice President John Barker, Jr., 501 Boylston Street, Boston 17, Massachusetts.

NEW ENGLAND

These University of Missouri men are New England Life representatives:
P. J. Harris, '23, Jefferson City
Robert L. Casebolt, '24, Kansas City
Frank T. Kreutz, '47, Portland, Oregon

Robert E. Hall, '49, Duluth

Singing auctioneer "on the move"

Leroy Van Dyke, a rarity in the country and western music field in that he is a University graduate (B.S. in Agr., M.U. '52), is plowing all his efforts into his singing career these days. As Leroy says, "I want to go as far as I can with it—otherwise how can I get the 2,000 acres of land and the herd of 300 Angus cows that I want here in Missouri someday?" Recent developments in his behalf include: a new contract with Mercury records, organization of a national fan club, lining up with a nation-wide publicity office, and his own organization of a merchandising promotional event for shopping centers around the country where his ability as an auctioneer is employed. Leroy would probably still be with a livestock publication as field representative and part-time auctioneer if his first Dot recording, "The Auctioneer," hadn't been a hit. But it was. There followed three years on the network TV show Jubilee, U.S.A. After that folded last fall, Leroy was busier than ever. His newest record is "Big Man in a Big House" (it's not about the new administration) and "Faded Love." Leroy and his wife, Sue, formerly with the M.U. Extension Service, live in Springfield, Mo., at 2144 South Florence Ave., where he does much of his own booking. His sister, Elinor, and brother, Dr. Elmer Van Dyke, are also University graduates.

JIM SILVEY is chief of the underwriting section, MFA Insurance Co., Columbia, Mo. He and Mrs. Silvey (BILLIE HOPPER, BS PA '55) live at 11 Bout Ave., Columbia.

HERBERT C. FEUERS, BS EE '09, in January at his home, 1118 W. 4th St., Sedalia, Mo. After graduation, he went to work for an engineering company in Denver, was later transferred to Fremont, Neb., where he was manager of that company for six years. In 1917 he was transferred to Sedalia as manager of the City Light and Traction Company, and remained on as manager when the company was sold to Missouri Public Service Company. He was manager for 32 years—until his retirement in 1949. He was also a director in the Sedalia Bank and Trust Company. He is survived by his wife, and by two sisters, Mrs. C. L. Gove, Hot Springs, Ark., and Mrs. W. A. Puchta, Jefferson City, Mo.

GEORGE W. POTTER, '11, Feb. 16, at Joplin, Mo. He began his engineering experience in an irrigation plant at LaFaya, Tex., returned to Joplin, Mo., in 1915 and went to work as a surveyor for Eagle-Picher Co. In 1939, he was named vice-president in charge of the company's mining division and later was promoted to executive vice-president. He retired from the company in 1944 and five years later acquired mining rights to the Ortiz Grant in New Mexico, and in 1951 formed a company to explore and develop the land. The Potter-Stint Co. had also operated several lead mines in the Joplin area, and in Oklahoma. He was active in various civic and fraternal organizations, and won the highest Boy Scout award for service with that organization. He is survived by his wife, Mrs. Fay Potter, Commer Hotel, Joplin, and a son, George W., Jr. of Kansas City.

DAVID EARIE WHITE, BS CE '20, in February, in a North Kansas City hospital. He was a lifelong resident of Norborne, Mo., serving as a Soil Conservation Service for 19 years. He was a retired farmer and active in church and lodge work. He is survived by his wife, of Norborne, and two sons, DAVID EARLE WHITE, Jr., BS PA '39, 3519 E. 51st, North Kansas City, Mo., and a brother, T. CHESTER WHITE, BS Agr., of Norborne.

JOHN MARION SLAGHTER, BS Agr., 12, Jan. 25, in Kansas City, Mo. He was vice-president of the board of directors
of the Hickman Mills bank, which he joined in 1909, and operated an insurance business. He was a veteran of WW I, an elder and member of the board of trustees of the Hickman Mills Community Christian School, and a school board member.

He is survived by his wife, MRS. LORA SCOTT Olsom, BS HE '15, AB '15; RS Ed '17, 6211 E. 115th St., Hickman Mills 53, Mo.; a son, HAROLD M. SLAUGHTER, AB '41, LL.B '49, Atlanta, Ga.; and a daughter, MRS. ELIZA BETH SCOTT Leatherman, BS HE '30, Bartlesville, Okla.

PAUL H. (SCOOP) CONLON, '14, Jan. 30, at his home, 1011 Valley Spring Lane, North Hollywood, Calif. At the end of his third year in journalism, he lost his job as sports reporter at the Los Angeles Times. Soon he was drama editor and in 1916 opened his own office as an entertainment personality publicist. At his death he had the longest continuous career in this field, and had managed careers for dozens of famous movie stars. He originated and managed the famed Liberty Loan Tour of six top stars in WW I, forerunner of the USO of WW II to the present. He is survived by his wife, a daughter and a grandson.

DORRANCE S. WHITE, AM '14, Jan. 22, in Iowa City, Iowa. He was married and had three children. Dr. White taught classical languages and literature at Iowa State University and edited a monthly column "Trends and Events" in the Class Journal. He was also the author of "The Teaching of Latin" and the White Latin Tests. His home address was 913 Hutchison Ave, Iowa City, Iowa.

GEORGE L. WILLIAMS, AB '22, Feb. 4, in Kansas City. He had been active most of his life in the real estate business in Kansas City, was formerly director of the Thomas & Minor hospital, was a member of the board of directors of Yellow Transit Freight Lines, Inc., and a member of the official board at the Country Club Christian Church. At M. U. he earned athletic letters in four sports, and was an All American basketball center in 1922, '23 and '24. In January 1960 he was elected to the Helms Basketball Hall of Fame. He is survived by his wife, Mrs. Genevieve P. White; their daughter, WS '67, Kansas City, Mo.; a daughter, Mrs. Dorothy Jenkins, of La Jolla, Calif.; a son, WILSON M. WILLIAMS, BS BA '53, Prairie Village; a step-son EUGENE ZACHMANN, BS BA '41, and a step-daughter, Mrs. Patricia Ogden, of California.

OWEN T. LEWIS. LL.B '22, Jan. 1, at Sioux Falls, S. D. He is survived by his wife.

JOHN L. OLSON, BS Agr. '29, in January, in Haines City, Fla. He was a partner in the Polk County Fertilizer Company of Haines City, and had been president for 24 years of the Huddler Citrus Growers Association. He was president of the Highland crate Cooperative of Jacksonville, president of the Grower Loan and Guaranty Co., of Tampa, a director of the Bank of Cooperatives and Federal Land Bank of Columbus. S. C. He was also a director and vice-president of the Florida Citrus Exchange, past president of the Haines City Rotary Club, past commander of the Yale-Varnum American Legion post, past master of the Haines City Masonic Lodge, and had served on the national board of the Boy Scouts. Survivors include his wife, Mrs. Margaret Olson, PO Box 186, Haines City, Fla., a daughter, and a son.

CLYDE EUGENE ASBURY, BS BA '24, Nov. 28, at Strathmore, Calif. He is survived by his wife, MRS. Dora Asbury, PO Box 311, Strathmore, Calif.

CLARENCE M. MILLER, '07, Feb. 14, in Sioux City, Iowa, following a cerebral hemorrhage. He taught at Mt. Pleasant school near Sanborn, Mo., for two years, then entered the insurance business in Kansas City. He and his family had lived in Sioux City for the past 10 or 12 years. He was a claims adjuster at the time of his death. Survivors include his wife and a daughter, Mrs. Robert Degen, Iowa City.

ROBERT C. STOCKWOOD, '33, Jan. 27, in Independence, Mo. He had owned and operated the Stockwood Tree Company in Independence since 1926. He is survived by his wife, Mrs. Mary M. Stockwood, 112 Kendall Rd., Independence; and two sons. LT. ROBERT C. STOCKWOOD, Jr., AB '38, MD '40, Fizimmons Army Hospital, Denver; and Randall L. Stockwood, of Independence.

LUCILLE HOFFARTH, BS BA '39, Jan. 5, at Springfield, Mo. She was an instructor at Draughon's Business College and housemother for the Athletic Dorm at Southeast Missouri State College, Springfield. She had served with the Tennessee Valley Authority in the personnel division until 1948, and served as the first personnel director for the city of Springfield. She is survived by her sister, Mrs. H. J. Rodzieski, 1115 Benton, Springfield, Mo.

MRS. MARTHA JAYNE SHANNON Norton, Feb. 12, in La Mesa, Calif. She was a kindergarten teacher at San Altos Elementary School in Lemon Grove, Calif. Mrs. Norton is survived by her husband, FRANK E. NORTON, BS BA '42, and two children, Elizabeth Ann and William Earl, and by a sister, Mrs. Paul Kelso, DOROTHY SHANNON '49, of 2872 Clark Drive, Cedar Falls, Iowa.

GEORGE H. SABINE, LL.D '31, Jan. 8, at Wheaton, Ill. He had been a professor of philosophy at the University from 1914-25, and was vice-president of Cornell University from 1931 until his retirement in 1948. Dr. Sabine was author of "History of Political Theory," a widely used textbook in American colleges and universities and in many parts of the world in translations. He is survived by two daughters, Mary J. Sabine, 7097 Georgia, Chevi Chase, Md., and Mrs. L. W. Beilby of Winchester, Mass., and a son, George B. Sabine of Belmont, Calif.

MRS. MARY RUTH PROCTOR Brunig, BS Nurs. '47, in February, in Arlington, Texas. She headed the night supervisory staff of the University Hospital after graduation, and later held a similar post in a St. Louis hospital before going to Arlington in 1959 as an assistant administrator. She is survived by her husband, W. L. BRUNIG '46, and three sons, William '42, Martin '6, and Robert, 18 months, of 1509 Hillcrest Dr., Arlington, Tex.

HARVEY W. ALEXANDER, BJ '18, Feb. 2, in St. Louis. In 1948 he became managing editor of the Lufkin, Tex., Daily News, and in 1949 joined the editorial staff of the St. Louis Star-Times. In 1951, Mr. Alexander joined Ford Motor Company and a year later was named manager of the company's Missouri Valley public relations office in Kansas City. In 1959 he was named assistant public relations manager for the Ford Division in Dearborn, Mich. He moved back to St. Louis early in 1960, opening his own public relations firm in May. He is survived by his wife, Mrs. Mary Kay Alexander, 1006 Bar- berton St., Crestwood, Mo., and five children, Christopher, Rebecca, Seth, Eve and Jennifer.

HERSCHEL NEIL, M Ed. '48, Jan. 31, at Veterans Hospital in Kansas City. He had once held the world's hop, step and jump record, tried out for the Olympic team in 1935. Failed to qualify, but later toured Europe with the U. S. Track team. While he was at Northwest Missouri State College he tied the world's record in the 100-yard dash, and was All American track star in 1935, '37 and '39. After graduation, he served as football and track coach at Maryville High School, served in WW II, then was principal and coach at Maryville, later was principal of Blue Springs, Mo., high school. He is sur-

survived by his wife, 300 Zaun St., Blue Springs, Mo., and two daughters.

DONALD CURTIS FORBIS, BS Agr. '51, was killed Feb. 20, when struck by the limb of a tree he was cutting on his farm near Tebbeds, Mo. He is sur-

survived by his wife and three children.
Albert G. Hogan

1884-1961

Dr. Albert G. Hogan, widely known animal nutritionist and for thirty-two years chairman of the University’s Department of Agricultural Chemistry, died in Columbia on January 25 at the age of 76.

Prof. Hogan joined the University faculty in 1920 as professor of animal nutrition and three years later became head of the Agricultural Chemistry department. He served in this capacity until 1955 when he retired as chairman and became professor emeritus. He had continued his research and writing until last December, and was research consultant for the National Live Stock and Meat Board of Chicago.

During his work at the University, Dr. Hogan made many contributions to new knowledge in nutrition and food chemistry. Among these were the recognition of Vitamin Bem—folic acid—and development of an assay method by which it was isolated and identified. The vitamin is helpful in the treatment of pernicious anemia.

He received the Mead Johnson & Co. Award in 1944 for original research on the Vitamin B complex. In 1948 he received a U. S. grant of $7,500 for experiments to find a nutrient to prevent hydrocephalus. He received the Morrison Award for work in animal nutrition in 1951, and the Borden Award in 1955—a $1,000 grant and gold medal presented by the American Institute of Nutrition. He received the Osborne-Mendel Award of $1,000 in 1959, also from the Institute of Nutrition.

Upon his retirement in May, 1955, Dr. Hogan was honored at a dinner at the Student Union. An oil portrait of Dr. Hogan was presented to the University. The Hogan Fellowship in Nutrition, named in his honor, was also presented to the University.

He was president of the American Institute of Nutrition in 1941-42 and a member of the editorial board of the Journal of Nutrition, 1937-42. He was a fellow of the American Association for the Advancement of Science, member of the American Chemical Society, American Society of Biological Chemistry, Society for Experimental Biology and Medicine, and Sigma Xi.

Dr. Hogan received his A.B. in 1907, B.S. in 1909 and A.M. in 1912, all from the University of Missouri. He received his Ph.D. at Yale in 1914 after serving as a fellow in physiological chemistry there in 1912-14. He was an assistant and assistant professor in chemistry at Kansas State University, 1914-17; professor of physiological chemistry at the University of Alabama Medical School, 1919-20, and professor of animal nutrition at the University of Missouri for thirty-five years. He served with the American Expeditionary Forces in France during World War I and had attained the rank of captain at the time of his discharge from the service.

He is survived by his wife and three daughters: Mrs. Andrew C. Minor (Theodosia C. Hogan, B.S. in Ed., ’43, A.M. ’52), Columbia; Mrs. Amelia Graves, B.S. ’46, Arlington, Va.; and Mrs. Donald C. McKercher (Madge Harden Hogan, B.S. in Ed., ’49), Wichita, Kan., and two brothers: R. P. Hogan, A.B. ’44, Springfield, Mo., and J. C. Hogan, Maryville, Mo. There are three grandchildren.
Baseball punch returns

Pitching is the big question mark in Coach John "Hi" Simmons' blueprints as the veteran Tiger coach begins his 22nd baseball season this month.

Thumpers there are in Mizzou's lineup, but Simmons recalls all too ruefully how his 1960 club led all collegiate teams in hitting with an overall .336 mark—but could show no better than a 17-9 record, and a fourth-place conference finish.

So, "Hi" looks hopefully to Dave Koch, ace of his '60 staff with a .50 mark, and to newcomers like Larry Bohannon, Jim Card and Rich Peterson to shore up his pitching corps. If the hurlers come through, Mizzou should make hay. The team's top four hitters of a year ago are back, and Simmons can spot lettermen at every position except one outfield post.

Back are such swatters as Dan Reilly, SS (471), Ron Cox, OF (347), Gene Orf, 2B (346) and Ed Mehrer, 1B (346). Cox won All-American honors as a sophomore, and led M.U. in six hitting departments. Orf, the Tiger's captain, probably will figure in a move to second base this spring to give Missouri an all-veteran array. The Bengals' 1961 schedule:

March 31, April 1—Arkansas, away; April 3-4, Memphis State, away; April 7-8—Oklahoma, away; April 11—Washington, away; April 14-15, Nebraska, home; April 18—Washington, away; April 21-22—Kansas, away; April 28-29—Kansas State, home; May 5-6, Iowa State, away; May 12-15—Colorado, home; May 19-20, Oklahoma State, away.

Third in indoor track

Missouri finished in a tie for third place with Oklahoma State in the Big Eight Indoor Track Championships, won handily by Kansas with 61 points. The Tigers picked up second place in five events.

Bob Hannicken was runner-up in both the mile and the two-mile run; Don Smith was second in the shot put; and Jerry McFadden in the 1,500 yard run and Lane Patterson in the 440-yard dash also were second.

Dave Butts was fourth and Lane Patterson fifth in the 800-yard dash, Pelser was fourth in the 600-yard run, Jim Baker fourth in the 440, and Morris Patterson fourth in the 1,500.

Missouri and Oklahoma State had a total of 92 points, and Oklahoma was runner-up to Kansas with 34½ points in the annual Kansas City meet.

Coach 'Tom Bots' track team opens its outdoor season against Arkansas at Fayetteville April 1. Other dual meets: Army at Columbia, April 8, Iowa State at Columbia April 15; Kansas at Lawrence May 6, and Kansas State at Columbia May 13. Missouri will be represented in the Kansas and Drake relays in April, Big Eight Championships at Boulder May 19-20, District A.A.U. Meet, Kansas City, May 27; Central Collegiate Meet at Milwaukee, June 3; N.C.A.A. Meet at Philadelphia, June 16-17; and National A.A.U. Meet at New York, June 23-24.

THE RECORD BREAKERS
from page 17

of 1106, just 6 points shy of Stewart's former three-season record. But a look ahead precludes both these seniors who accounted for nearly 60%, of the Tigers' league leading scoring record. On the brighter side, though, are the late season emergence of 6-7" soph Howard Garrett, the return of regular Ron Cox, the steady leadership shown by soph Ken Doughty, the promising play of other sophs like Hunter, Houston and Dinsdale, and the sound play of Stewart's (2-2) yearlings.

The Big Eight finish was in this order: Kansas State, Kansas, Oklahoma State, Missouri, Colorado, Iowa State, Nebraska, Oklahoma.

page thirty-six

If you will look on the back cover you will find an error that has been running since last fall. In the explanatory note at the bottom of the Honor Roll of Alumni Clubs it is stated that Distinguished Clubs are those with active membership of over 15 per cent of their potential; the same is said for the Superior Clubs. Actually, it should be 20 per cent for the Distinguished Clubs. The error was discovered in the office (not by the proofreader, who shall remain anonymous) a month later. Since a correction would involve quite an expenditure for a new engraving, it was decided to let the error go for a while, to see if any readers noticed it. No one spoke up for a couple of months, then Jake Noel of Advance, Mo., wrote in, and he gets our Eagle Eye Award. Since then several others have noticed it. It was further decided not to make a new plate until the old one gets some more wear on it, which will take us through the remaining issues of the school year. But the change will be made in the fall, then we can all start looking for new bounces.

On the night of March 11 the ABC network televised a boxing bout between Carmen Basilio and Don Jordan, it wasn't much; only two fighters were in the ring. Earlier in the day the network brought the nation a more exciting spectacle, with possibly 200 persons involved in a free-for-all about midway of a basketball game between Kansas and Missouri. The network may well consider carrying future contact sports events between the two schools by closed circuit TV to sold-out theaters around the country, now that the Patterson-Johannson fights have run their course. However, a wiser plan might be a moratorium on Kansas-Missouri athletic relations for a few years, to prevent further mayhem and allow for a return of sanity and sportsmanship.

If Jean Madden would get his sports copy in before the magazine starts filling up, so it wouldn't spill over, page thirty-six would have more room. J.C.T.
Leukemia now gives its young victims only months of life. But there is hope for those with this form of cancer. That hope is research.

Research has already extended the lives of many leukemia patients by months and even years. Research alone can find a way to stop this cancer of the blood-forming tissues once it has mysteriously begun. And every day that a leukemia patient lives allows science one more day to find a cure—or even a new way to extend his life a little longer.

Every year leukemia kills 2,000 children and 10,000 adults, and the incidence is rising. Every year the American Cancer Society allocates more and more money to research specifically related to leukemia. Last year, it allotted nearly $1,000,000 to such research, out of a total research expenditure of about $12,000,000. Much more money is needed this year. The more you contribute, the faster research on leukemia and other forms of cancer will progress. Guard your family! Fight cancer with a checkup and a check! Send your contribution to “Cancer,” in care of your local post office.
