Yandiola et al., *Prospective Comparison of Severity Scores for Predicting Clinically Relevant Outcomes for Patients Hospitalized with Community-Acquired Pneumonia*, *CHEST*, June 2009; 135(6): 1572-1579

<http://www.chestjournal.org/content/135/6/1572.abstract>

A new severity score for hospitalized patients with CAP, the Severe Community-Acquired Pneumonia (SCAP) score, was found to be superior in multiple measures when compared with PSI and CURB-65.

Cantor et al., *Routine Early Angioplasty after Fibrinolysis for Acute Myocardial Infarction*, *NEJM* 2009, June 25; 360(26): 2705-18

<http://content.nejm.org/cgi/content/abstract/360/26/2705>

Over 1000 AMI patients who were treated with fibrinolysis were randomized to early PCI or standard treatment. Those who underwent early PCI had a significant reduction in major endpoints (death, reinfarction, CHF, cardiogenic shock) at 30 days (11% vs. 17.2% in the standard treatment group).

Zier et al., *Surrogate Decision Makers' Responses to Physicians' Predictions of Medical Futility*, *CHEST*, July 2009; 136(1): 110-117

<http://www.chestjournal.org/content/136/1/110.abstract>

This small but powerful study out of San Francisco gives an interesting perspective on the attitudes of surrogate decision makers toward physician recommendations about their critically ill family members.
