**GN\_HON 3241H: Evolution of Human Nature**

(same as ANTHRO 3340H). We will investigate the topic of human nature, asking such questions as: What are we like? Why do we behave the way we do? Are we inherently selfish or social? Do we have a unitary 'self' or are we made up of many (and sometimes contradictory) selves? Is there a single 'human' nature or are there distinct 'male' and 'female' natures? Does human nature vary across cultures? Insights come from fields ranging from genetics to literature. The concept of 'human nature' is fiercely contested and debated both within and between academic disciplines. We will be focusing on the scientific study of human nature, seeking naturalistic explanations by formulating and testing hypotheses. In particular, we will use evolutionary theory to unify explanations from disparate disciplines like biology, psychology, and anthropology. In each class, we will discuss one specific topic like sex or violence and seek to make sense of it from both the proximate level (what triggers the behavior and how does it develop?) and the ultimate level (why and how did our evolutionary history imbue us with this capacity?). Graded on A-F basis only.

**GN\_HON 3242H: The Future Is Indigenous! - Honors**

Today, Indigenous peoples around the world are reasserting an ancient idea that our human responsibilities to the planet come through place, and that our planetary responsibilities are fulfilled by investing in and

learning from place. Place-based Indigenous thought and activism give us new ways of thinking about global citizenship within a more-than-human democracy of beings - a 'pluriverse' - and changes our understanding of what it means to be human in the twenty-first century. After looking at the limitations of the system of global ethics in cosmopolitan philosophy, we will get acquainted with the 'place thought' of three Indigenous peoples: the Western Apache of the USA, the Maori of Aotearoa/New Zealand, and the Huaorani of the Ecuadorian Amazon. This course satisfies three credit hours of general education requirements in the behavioral and social sciences and is part of the Honors College's Interdisciplinary Topics in the Human Sciences series. **JOURN 4370: Film Studies: The Intersections of Documentary Film and Journalism**

(same as FILMS\_VS 4370; cross-leveled with FILMS\_VS 7370, JOURN 7370). The popularity of documentary film in the past ten years has skyrocketed, and recent award-winning documentaries such as *Inside Job* (2010), *Blackfish* (2013), and *The Invisible War* (2012) are simultaneously entertaining audiences and investigating serious issues like the financial collapse, killer whale captivity, and sex crimes in the military--issues that in the past might have been covered exclusively by investigative journalism. What explains the public's growing fascination with documentary? How is documentary film reacting to recent transformations in the media landscape? Is it filling a critical need that journalism is no longer willing or able to meet? This course will explore the intersection of these two nonfiction storytelling forms - documentary film and journalism - and examine the role played by advocacy in both modes, as well as the cultural and ethical implications of the convergence between journalism and documentary film. In that it is centered on contemporary documentary film culture, the course also takes advantage of the True/ False Film Festival, and will be host to a conference during Week 6, featuring a number of major visiting filmmakers and film critics. Attendance at some sessions is required. Graded on A-F basis only.

**JOURN 4371: Documentary Theory**

(cross-leveled with JOURN 7371). Documentary and other long-form story telling methods involve a complex series of decisions made in the creation of the work that determines its style, length, direction, point of view and more. These and a thousand other editing decisions are the difference between a successful project that touches its audience and one that falls short. The focus of this course is on the craft of editing, as seen in a variety of documentary and other works and explained through the decisions made in and out of the editing room that lead to the final product. The course will introduce important concepts of editing, the work of significant editors in both documentary and narrative fiction films, and seek to apply those techniques to the conceptualization of documentary work students will do as part of their degree. Students will understand the history of documentary editing as it evolved on its own and as influenced by narrative fiction films, the language of editing, the work of important editors and directors and how it influences today's aesthetic and how to apply what they have learned to their own documentary projects at an advanced level. The ability to properly think of, clearly articulate, pitch and hone a project idea often makes the difference between a successful and unsuccessful final film. Still these ideas don't materialize out of thin air; inspiration for great documentaries can come from many places. Understanding how to seize viable project

ideas is a crucial skill for a documentary filmmaker. Graded on A-F basis only.

The course introduces students to insight-driven approaches to innovation including David Novak's Taking People with You philosophy of leadership and design thinking while offering ample opportunities to put these methods into practice. To simulate the entrepreneurial process, students identify an unmet need or market

opportunity and develop an innovative product or service to solve a real-world problem. 'Startup teams' of four students engage in research, ideation, rapid prototyping, and iterative design to develop insights and a solution to meet the needs of real customers. Teams also conduct a market analysis, and develop a business model and go-to-market strategy for launching their startup and enlisting key partners to support their venture. The course culminates in a pitch competition in which teams present their ideas and strategies to a panel of industry experts and investors. In the process, students gain valuable leadership skills, develop an entrepreneurial mindset, and learn how to work with diverse teams and audiences to collaborate and solve problems. This is one of the three courses comprising the Leadership Interest Area in Strategic Communication. Students admitted to this course are also given priority to participate in the Novak Future Leaders Tour to San Francisco, where they gain exposure to ideas and leaders at some of the world's most innovative companies and organizations. **JOURN 7370: The Intersections of Documentary Film and Journalism**

(same as FILMS\_VS 7370; cross-leveled with JOURN 4370, FILMS\_VS 4370). The popularity of documentary film in the past ten years has skyrocketed, and recent award-winning documentaries such as *Inside Job* (2010), *Blackfish* (2013), and *The Invisible War* (2012) are simultaneously entertaining audiences and investigating serious issues like the financial collapse, killer whale captivity, and sex crimes in the military-issues that in the past might have been covered exclusively by investigative journalism. What explains the public's growing fascination with documentary? How is documentary film reacting to recent transformations in the media landscape? Is it filling a critical need that journalism is no longer willing or able to meet? This course will explore the intersection of these two nonfiction storytelling forms--documentary film and journalism--and examine the role played by advocacy in both modes, as well as the cultural and ethical implications of the convergence between journalism and documentary film. In that it is centered on contemporary documentary film culture, the course also takes advantage of the True/ False Film Festival, and will be host to a conference during Week 6, featuring a number of major visiting filmmakers and film critics. Attendance at some sessions is required. Graded on A-F basis only.

**Credit Hours:** 3

**JOURN 7371: Documentary Theory**

(cross-leveled with JOURN 4371). Documentary and other long-form story telling methods involve a complex series of decisions made in the creation of the work that determines its style, length, direction, point of view and more. These and a thousand other editing decisions are the difference between a successful project that touches its audience and one that falls short. The focus of this course is on the craft of editing, as seen in a variety of documentary and other works and explained through the decisions made in and out of the editing room that lead to the final product. The course will introduce important concepts of editing, the work of significant editors in both documentary and narrative fiction films, and seek to apply those techniques to the conceptualization of documentary work students will do as part of their degree. Students will understand the history of documentary editing as it evolved on its own and as influenced by narrative fiction films, the language of editing, the work of important editors and directors and how it influences today's aesthetic and how to apply what they have learned to their own documentary projects at an advanced level. Graded on A-F basis only.

The ability to properly think of, clearly articulate, pitch and hone in on a project idea often makes the difference between a successful and unsuccessful final film. Still these ideas don't materialize out of thin air; inspiration for great documentaries can come from many places. Understanding how to seize viable project ideas is a crucial skill for a documentary filmmaker. Graded on A-F basis only.

**KOREAN 3650: Korean Politics**

This course is designed to help student understand the dynamics of Korean politics by critically examining major political issues in Korean political history since 1945. Korea is well known country as a rare example that has achieved rapid economic development as well as democratization in a short period of time in the world. However, Korea has experienced severe political struggles in the process of its political development. I assume Korea has survived three stages of political struggles, that is, the struggle for state-building, the struggle for the economic development, and the struggle for democratization which is in progress. For critical understanding of the Korean politics I will deal with the important issues in each stage of political struggles. I am also planning to deal with somewhat external issues that might have affected the Korean political process, that is, North Korean nuclear challenge and unification questions, and Sino-US rivalry in the East Asia.

**KOREAN 4220: North Korean Politics**

This course is designed to help student understand the dynamics of North Korean politics. North Korea can be described as an exceptional country in many ways. First, the transition of power in the North Korea was made through the hereditary succession like a monarchy even though it claimed to be a socialist country. Second, North Korea has survived as a socialist country, while most of the communist countries including the Soviet Union and East European countries collapsed in the late 1980s and the early 1990s. Third, the North Korea, one of the poorest countries, has developed the nuclear weapons as well as other weapons of mass destruction, threatening the international security. For critical understanding of the North Korean politics I will trace the Korean communist movement, and deal with the North Korean political history since 1945. I am also planning to deal with the ideology and important governmental structure including the Korean Workers' party, the Military Commission and the social control structures. Then I will examine the current issues including economic reforms, the nuclear challenge, and the several issues with the South Korea like unification questions and the conclusion of the peace treaty to end the Korean War.

Society has moved online - so have our legal disputes. Most of us have tapped 'I agree' without reading the fine print; streamed copyrighted works without paying a license fee; and crept someone via google and social media. Most of us have also been digitally hacked, phished, and spied upon; our personal data has been collected by private and governmental entities; and we have repeatedly heard these buzzwords of network neutrality and bitcoin. This is a survey course in the law of the internet -- civics of the internet. We cover regulation of the internet and big media companies such as Facebook and Google; privacy law from various angles; liability for various nefarious activities (including actions

taken by AI rather than humans); and yes, what happens when you click 'I agree.' Although we discuss computer technology, this is not a high-tech class. You will not need any technical expertise beyond knowing about email, the world wide web, and texting.

**LAW 5862: The Regulation of Medical Marijuana Businesses**

More than half of the states now authorize designated businesses to produce and sell marijuana commercially. However, these businesses remain subject to extensive state regulation. In 2018, Missouri adopted a constitutional amendment, Art. XIV, § 1, with a purpose to authorize medical marijuana. State regulations raise a host of legal questions: How do states award commercial licenses to grow and sell marijuana? Are any state licensing regulations preempted by federal law? Do state advertising restrictions violate the First Amendment? How are marijuana licensees disciplined for regulatory violations? Marijuana businesses also face numerous regulatory hurdles erected by the federal government, adding to the questions surrounding the marijuana industry: Do marijuana businesses have any viable legal defense against federal criminal prosecution? Can marijuana businesses register their trademarks? Can they deduct their expenses when they pay their federal taxes? Will courts enforce contracts with the marijuana industry? Can the industry obtain banking or legal services? The resolution of these issues is in a state of flux throughout the nation and, in particular, in Missouri, in light of Missouri's 2018 constitutional amendment. This class will address these and related questions surrounding the nascent marijuana industry.

governed. In contemporary business corporations, the main external stakeholder groups are shareholders, debtholders, trade creditors, suppliers, customers and communities affected by the corporation's activities. Internal stakeholders are the board of directors, executives, and other employees. This course will illustrate some of these key relationships, including how they can go wrong and the trade-offs managers have to make to manage all of these relationships. This course can be seen as a course on the professional responsibilities of business leaders. **NAT\_R 8300: Urban Biodiversity, Conservation, and Planning**

The importance of urban biodiversity is debated by many in the conservation community. Some researchers and managers focus on threats to biodiversity associated with urbanization and land use change. In contrast to this approach people who live in, study, or care about cities: ecologists, wildlife managers, conservation biologists, planners, and local residents have debated what biodiversity means in urban settings. Recent literature on biodiversity in cities notes the range of ecological, social, and cultural meanings of urban biodiversity and stresses the importance of defining the setting and scales at which biodiversity is being assessed. This approach to urban biodiversity has documented the importance of conservation of rare species and habitats but also the importance of managing the range of habitats in and around where people live, work, and play. This course builds on the work of the NSF-funded Urban Biodiversity Research Coordination Network (UrBioNet), with course modules taught by UrBioNet steering committee members.

This course surveys developments in the philosophy of race. We will examine the ordinary conception of race and consider criticisms of it. **PHYSICS 2500: The Beautiful Invisible: Exploring Physics, Fiction, and Reality**

This course explores the conceptual structure of modern physics from a humanistic perspective. Rather than describing the natural world 'as it is', physical science weaves some key observations in a convincing and memorable narrative. It is not within its power to explain reality, but it can make it understandable, sometimes even predictable. Due to the presence of internal and external constraints, physical theories are akin to myths, i.e., fiction created by many authors over an extended period of time. The mythical character of a theory does not diminish its scientific validity - quite the contrary. Convincing myths are not easily found and better observations demand better myths. The mythical content of the theory is not some extraneous content that we introduce for the sake of popularization, but an essential part of the science itself.

**PHYSCS 4210: Contributions to Science from Under-represented Groups**

(same as ASTRON 4210; cross-leveled with ASTRON 7210, PHYSCS 7210). STEM fields are amongst the areas of human endeavor that struggle with increasing their human diversity. Teaching of science rarely discusses the contributions or marginalizations of under-represented groups. Meanwhile, many women and indigenous cultures have contributed to progress in STEM but are often not recognized. In this course we will investigate these contributions, and the lack of recognition both historically and in the present day. The aim is to provide students with a better understanding of the advantages of and challenges in inclusive, diverse science. Initially the course will use astronomy as its

frame of reference because the sky was one of the earliest laboratories and consequently it has a long history with many indigenous cultures developing their own cosmologies and ways of studying the sky. As we discuss the role of Indigenous peoples, people of color, and women, we will investigate the role of power structures as well as systemic biases in the marginalization of these groups. This class will be strongly discussion oriented, with assessment based on the development throughout the semester, of a final project. As many students will be pursuing graduate school in STEM fields, the final project will be to develop a Broader Impact statement. Many federal funding agencies request or even require that research grants include a component aimed at 'broadening participation', i.e. making STEM more inclusive and diverse. Student will work on a multipart assignment that will culminate in a Broader Impact statement that may well be directly applicable to an NSF GRFP (Graduate Research Fellowship Program) or NSF Post-Doctoral Fellowship. In addition to the Broader Impact statement - students will give presentations and learn how to be more inclusive in their presentation design, following the principles of Inclusive Design for Learning. **POL\_SC 2455: Constitutional Debates**

(same as CNST\_DEM 2455). While we will make reference to the work of canonical political thinkers from the Western tradition during the semester--and while we will also, at times, take a broadly philosophical approach to describing certain of the Founders' theses on governance--

this is not a course in 'high theory.' Instead, our examination of the process of drafting and ratifying the United States Constitution will be more pragmatic in nature, focusing on the practical problems and questions concerning national governance that shaped the final design of the Constitution. At the same time, this description of the class as one that addresses the Constitution in terms of the practical problems that the Founders saw it solving drastically understates the complexity and contentiousness of the subject matter that we will be examining. Specifically, the readings for the course will allow us to identify the ways in which, and reasons for which, the Founders disagreed not only on how to solve the problems of governance that the nation faced in 1787 but, moreover, on what these problems actually were. With regard to this task of understanding the principles underlying the heated debates that arose during the drafting and ratification process, it should be noted that this is not a class in Framer-worship. While we will discuss why the Federalists ultimately 'won the day,' we will also devote significant attention to how the Anti-Federalists both profoundly influenced how we understand constitutional democracy in the United States and provided an intellectual lineage that still informs contemporary political debate. We will, that is, give each side their due. In addition, we will conclude the semester by considering the Constitution's post-ratification history, looking at a handful of Supreme Court decisions and constitutional amendments in order to think about some of the questions that the 1787 Constitution left unanswered and some of the problems that it left un-solved.

**POL\_SC 2500: The Science of Politics**

This course provides an introduction to the Science of Politics. We will consider a variety of research methods, including historical case study research, field research, quantitative analysis, survey research, experimental techniques, and more. Whatever the research method, one of the central objectives of the course is for students to come away with a clear understanding of how to evaluate causal relationships in the political world. The course is also chock-full of real world applications, with the goal of using actual science to empower you in three ways. First, you will appreciate that the root of science is skepticism and logic, allowing you to make freer choices and to become a better problem solver. Second, in this course you will become a practiced consumer of social science, giving you substantial power to understand, evaluate, and utilize scientific knowledge, whether you choose to work in politics, journalism, industry, government, or elsewhere. Third, the course will provide you with actual research explaining why politicians seek and win elections, why countries go to war, why we follow our parents' political ideologies, why some countries are rich and others poor, and so much more of vital importance for our planet. To think scientifically, in short, is to develop understanding of humanity, seeing the invisible yet powerful forces that shape our lives. Graded on A-F basis only.

**POL\_SC 4132: Race, Immigration, and Urban Politics**

The global world is increasingly an urban world: about half of humanity lives in cities and this trend is expected to continue apace. In the United States, over 80 percent of people live in metropolitan regions. Urban areas present enormously complex opportunities and challenges, from the perceived failure of urban public schools, to seemingly intractable racial inequalities, to the integration of a new wave of immigrants, to affordable housing, to efficient public transportation. On the other hand, cities have long been heralded as places of opportunity, spaces of economic development, entrepreneurship, and multiculturalism. Under what conditions are urban spaces socially just, diverse, and prosperous? Under what conditions do they become spaces contested by different interest groups? Cities are the canvas upon which many of the most pressing social issues of our day are being constructed. This course will give students an interdisciplinary understanding and analysis of these urban social problems, by bridging the literature on urban politics with that on urban geography. The complexity of urban issues calls for diverse perspectives in order to imagine creative responses. Approaching the urban experience from qualitative and quantitative perspectives will help students address structural as well as individual solutions to the problems urban residents face.

**POL\_SC 4190: Elections and Democracy in the United States**

This is a class on United States election processes and their relationship to democratic governance. By election processes I mean the rules and procedures under which elections are contested. These include franchise, balloting methods, vote aggregation rules, apportionment, districting and related subjects. The class does not engage public opinion, partisanship, voter choice and other subjects typically classified as political behaviors. Elections are a means to an end; that end is normatively defensible democratic governance. Consequently, we discuss these subjects in the context of American democratic thought and ideals. Election processes can either contribute towards our democratic goals and aspirations or detract from them. More precisely, different election methods privilege different democratic values. To understand whether United States elections work well or poorly one must understand the democratic ideals that have most deeply influenced the American experience. We study election processes from a historical development perspective informed by political thought. However, our assessment of United States elections is deeply informed by contemporary theory and empirical analysis.

Off in the quiet corners of the policy process, public servants distribute public benefits, write rules that have the force of law, adjudicate conflicts and selectively enforce the law. Frequently the government delegates these tasks to non-profit organizations. These public and quasi- public administrative organizations play, therefore, a critical role in the politics of who gets what, when and how - the essential question of public policy. Administrative organizations in the United States play this powerful role, however, within a constitutional democracy. This course focuses on policymaking through the administrative state and the relationship between the administrative state, democracy and the U.S. Constitution.

**POL\_SC 4390: United States Health Politics and Policy**

This course deals with the politics and public policy of health in the United States. This topic is broader than you may think - when many Americans hear 'health policy,' they probably think first of the Affordable Care Act (Obamacare) and other policies dealing with health insurance. There is no doubt that these issues are important and deserve our attention, they are just the tip of the iceberg of how politics and policy affect the health of the US population. In addition to issues of health insurance coverage, this course will cover topics ranging from the quality of medical care, to socioeconomic disparities in health outcomes, to substance abuse and addition, to gender and reproductive health, to the question of what counts as a 'disease,' and more. All of these issues are deeply political, whether you may realize it or not, and all present public policy challenges. In addition to building your subject matter knowledge, this course will help you to develop critical thinking and argumentation skills about public policy issues. It will also give you experience in conceiving and drafting a policy memo, a common format of written communication in the policy world.

Instead, the focus will be on understanding the underlying interests of important actors towards human rights, the arenas in which these actors interact, and the rules which govern their interactions. This focus on the basic principles will provide you with a rich practical knowledge of human rights. At the conclusion of the course, you will be able to actively engage with the global human rights community.

**POL\_SC 4790: The Age of Democratization?**

Democracy has become a global norm. After repeated waves of democratization, democracy has now reached all corners of the world and spread far beyond the affluent West. How can we understand transitions to democracy and democratic stability? What is the relationship between democracy and development and what can America and other Western powers do to promote democracy abroad? Although democracy has been on the rise in the last decades we have also seen new challenges emerge. Many countries have adopted democratic facades hiding the persistent stability of authoritarianism. We have also seen the rise of China and Russia in world politics, creating a powerful counterweight to the previously dominant liberal order. How will this change affect the prospects for democratization in the future? These and other questions will be debated in this course as students will be introduced to central question, theories, and findings in comparative democratization.

Exceptions to the requirement of completion of 2 semesters of MPH coursework will be granted for students who have completed or concurrent degree. Examples of relevant preparatory coursework will include epidemiology and veterinary public health. As an integrating experience, the capstone will require students to apply knowledge in an independent manner, integrate knowledge into cohesive production, and communication the results of this experience.

**Credit Hour:** 1-99

**REL\_ST 2220: Death and Dying in the Western World**

Death is a topic most Americans wish to avoid. Once we were very familiar with it since people before the mid-19th c. usually died at home, their bodies mourned at home, and then buried either in a designated public space or on their property (especially in the South). Today, most people die in hospitals or medical-oriented institutions (like nursing homes). Because death is so hidden (even disguised) most of us have never seen a dead body except in film or on television and those bodies are often a result of an exceptionally gruesome, yet highly staged death. Hidden death in everyday life has led to the fact that most Americans are unfamiliar with death and even outright afraid of it. People unconsciously treat death, the process of dying, and grief as a sort of infectious disease. However, death surrounds us both personally and collectively and this means that the living and the dead do not exist (and have never existed) in completely separate realms. This class explores how death has historically been approached in the Western world and familiarizes us with different types of death (natural death, death by execution, death from illness, and death by murder). Using a religious studies and American studies approach we will examine overarching themes of grief, loss, mourning, and even anger in association with death and dying.

Through close readings of theological treatises laced with profanity, insults, and outrage, we shall explore how central Christian theological convictions about baptism, the nature of Jesus, gender roles, sin, salvation, and other topics were constructed through argumentation and compromise. Though some theological disputes were settled politely through votes at church councils, even these peaceable compromises often emerged through a spate of insults and red-faced polemic. We shall read and discuss some of the most colorful--and enduringly influential--cases of theology developing through brash confrontation, from the Luther Insult Generator to the fiercely angry articulations of Christian theology in contemporary America. Students will learn to understand the

logic and purpose behind these vehement arguments in their historical context and practice evaluating competing claims about complex issues such as the Trinity, the path to salvation, and sin. Graded on A-F basis only.
